*Season average returns per box to growers at the packing-house door, 1919-43 seasons.

¹ Production is from bloom of the year shown.

² Including tangerines.

³ Preliminary.

Note: Boxes of citrus fruits are of varying sizes and weights.

THE FEDERAL RECLAMATION SERVICE

The Bureau of Reclamation is charged by law with the work of construction and supervision of irrigation projects in the arid and semi-arid western states for the purpose of improving public land, conserving water, and providing new opportunities for the people.

The United States has about 600,000,000 acres of desert land within its boundaries. Over much of the land only three inches of rain falls per year, and the only way crops can be grown is by irrigation. In addition, most of the scanty rainfall comes in the winter months, while the summers are long and dry. In the Imperial Valley, no rainfall has fallen in June during the past 35 years.

The irrigated agriculture of the West has grown until it covers 21,000,000 acres, of which 1,824,004 acres are irrigated within projects constructed by the Bureau of Reclamation. Probably the maximum amount of land possible to irrigate is not more than 30,000,000 acres.

Because of the expense of obtaining water, the irrigation farmer must grow crops that cannot be grown any place where water is

plentiful. Consequently oranges, lemons, grapefruit, dates, avocados, pomegranates, figs, almonds and English walnuts are favorite crops. Vegetables, fruits, alfalfa also are grown. These crops are termed "non-competitive" because they seldom compete with crops grown by other American farmers—at least in the same markets.

Revenue to the bureau comes from public land sales, mineral leases and royalties, power licenses, construction charges, and operation and maintenance charges. In addition, there may be direct appropriations by Congress.

The ultimate investment in Bureau of Reclamation projects, completed and under construction on July 1, 1940, is estimated at \$1,350,000,000. Of this amount about \$600,000,000 is yet to be made available. Nearly half of the total investment will be repaid by water users, more than 45 per cent by revenues from power and municipal water, and about 5 per cent will be charged off to flood control, navigation, and other non-reimbursable activities.

NINETEENTH BABY

A British mother, Mrs. Dorothy Russell, 43, of Grimsby gave birth to a 14 pound boy on October 11, 1945. The child is the newest

of 19 children of which 17 are living. Her eldest child is 23 years old.

BIRTHS AND DEATHS DECLINE IN 1945

Deaths in the United States declined by about 25,000 in the first eight months of 1945 compared with the first eight months of 1944, while the number of births declined by only a little more than 5,000, according to the Bureau of the Census, Department of Commerce.

In the first eight months of 1945 the Bureau of the Census estimated that 1,853,000 births were registered, a decline of about 5,000 or three-tenths of one percent from 1,858,365 births registered in the first eight

months of 1944.

In the first eight months of 1945 an estimated 931,000 deaths were registered, a decline of about 25,000 or 2.6 percent from 955,945 deaths registered in the first eight months of 1944.

These figures do not express total births and deaths in the United States, because the figures are not corrected for underregistration. The estimates are based on telegraphic reports from the States and the District of Columbia.

¹ The marketing year usually begins in August in the southwestern peanut area, in September in the southeastern area, and in November in the Virginia-Carolina area; season average price, year beginning September.

² Preliminary. ³ Indicated October 1. ⁴ Forecast.

1,196,000 BOYS REACH 18 YEARS IN 1945

American boys reaching the age of 18 years during 1945 were about 1,196,000, the Bureau of the Census, U. S. Department of Commerce, estimated. For 1946, the Census Bureau's estimate for the same age category is 1,170,000.

The estimated number of males reaching specified ages during 1945 and 1946 as announced by the Census Bureau are:

Age	1945	1946
18 years	1,196,000	1,170,000
19 years	1,205,000	1,193,000
20 years	1,208,000	1,199,000
21 years	1,211,000	1,202,000

More than one million males attain the age of 18 years each year, according to studies of Census population experts based upon an analysis of 1940 Census data and vital statistics records. The number reaching 18 has diminished slightly each year since 1940 and will continue to decrease until 1951, and then begin to rise, this trend reflecting the downswing in the number of births up to 1933 and the subsequent upswing. The number will not again reach the 1940 high of 1,281,638 until after 1958.

Compiled from official sources, International Institute of Agriculture, sugar associations and trade estimates. Figures are for the crop years 1930-31 to 1944-45 for the countries in which the sugar-harvesting season begins in the fall months and is completed during the following calendar year, except in certain cane-sugar producing countries in the Southern Hemisphere, such as Argentina, Australia, Mauritius, Union of South Africa, etc., where the season begins in May or June and is completed in the same calendar year. Production in these countries is for the calendar years 1930-41. Preliminary. ² Includes cane sugar. ³ Includes Austria, Sudetenland and Eastern Provinces and General Government of Poland. ⁴ Bohemia, Moravia, and Slovakia. ⁵ Includes territory ceded to Hungary by Czechoslovakia and Rumania. ⁶ Includes territory ceded to Hungary by Czechoslovakia, Rumania, and Yugoslavia. ⁷ The figures quoted for India are for the production of gur, a low grade sugar polarizing between 50° and 60°. Practically the entire crop is consumed within the country. Figures for Java are the calendar years 1930-44.

Compiled from official sources and trade estimates.

¹ Crop year with beginning dates varying from September to the following June.

² Beet sugar (refined) reduced to raw basis by multiplying by 1.07.

³ Figures for 1909-23 include Louisiana and Texas; 1924-27, Louisiana only; beginning 1928 Louisiana and Florida.

⁴ Normal grinding season begins October 1. In 1933 production was from grindings of October 13 to December 31, 1934. For crop year 1934 and subsequent years production is from grindings of next calendar year.

¹ Fresh vegetables, potatoes and sweetpotatoes are in terms of quantities available for consumption at the farm level. Normal marketing losses, covering shrinkage and storage in transit and in storage, and spoilage in retail stores are estimated as follows: Fresh vegetables about 15 percent, potatoes, 15 percent; sweetpotatoes, 30 percent. Canned vegetables are in terms of net canned weight, and should be increased by about 70 percent if converted to a fresh weight basis.

² Preliminary.

¹ Includes horses, mules, cattle, hogs, and sheep, excluding sheep and lambs in commercial feed lots on feed for market before 1920.

Agricultural World

China and India, each of which have a population of more than 400,000,000 people, are agricultural nations. Also agricultural are large areas of Europe, Africa and South

America. Approximately 75 per cent of the world's two billion population still gets its living from the soil.

¹ 1880-1906, equivalent of federally inspected slaughter estimated by the Bureau of Agricultural Economics; 1907 to 1943, federally inspected slaughter.

² Total slaughter estimated by the Bureau of Agricultural Economics, includes noninspected, wholesale, retail, and farm slaughter.

³ Rounded figures added for all totals, except yearly 1907 to date.

⁴ Excludes cattle purchased for slaughter for Federal Surplus Relief Corporation from June 1934 to February 1935 and for August and September 1936.

¹ These estimates are tentative.**COST OF WORLD WAR II**

World War II cost participants one trillion, 852 billion 939 million dollars according to a survey by James H. Brady and American university in Washington, D. C.

Armament and war materials accounted for about \$1,154,000,000,000 of the total expenditures. Of the remaining cost, \$230,000,000,000 covers property damages excluding China's losses for which figures are unavail-

able. U. S. expenditures were placed by the survey at \$317,600,000,000. Russia spent \$192,000,000,000 for victory while the United Kingdom appropriated \$120,000,000,000 to defeat the Axis powers.

Hitler and company gambled \$468,939,000,000 on winning the war.

¹ Civilian per capita consumption is estimated at 141.4 pounds in 1941, 137.9 pounds in 1942, 136.6 pounds in 1943 and 143 pounds in 1944. ² Includes 1,502 million pounds of meat distributed under the emergency Government relief program in 1934 and 62 million pounds in 1935. Preliminary. ³ Indicated.

Protecting the Soil

The protective covering of the soil and the humus content of the soil are two important factors that determine its water-holding capacity and the run-off rate of surface water.

Research several years ago at the Bethany (Mo.) Erosion Experiment station, showed that where corn was grown continuously on a 8 percent slope, the loss of moisture as immediate run-off of rains was 27 per cent of the annual precipitation. When alfalfa was grown on the same soil and slope the

water loss was less than 4 per cent of the annual precipitation and when timothy was grown, the water loss was only 8 per cent of the annual precipitation.

Drought may be caused both by the lack of rain and a lowering of the water table, the subsoil moisture level. The rapid run-off of surface water on exposed areas which destroys the soil also results in lowering of the water table which intensifies the effects of drought.

Cost of Crops

The cost to the land of a cultivated crop must be reckoned in terms of the soil lost through erosion, the fertility removed by the top and the fertility lost through erosion and leaching.

Even when little washing away of the soil takes place, land that is intensively cultivated may lose a great deal of its fertility through leaching or draining away of valuable mineral elements which dissolve in water. Rainfall on bare fields, loosened by cultivation, even when fields are almost flat, may soak rapidly through the soil, dissolving mineral nutrients such as phosphorus, potash, and calcium (lime) and, eventually, carry them into streams and rivers. Some leaching, of course, inevitable. But leaching is increased by farming practices which leave

the land bare of cover for long periods. It can be greatly decreased by use of grass and other protective crops.

Additions to and losses from plant nutrients contained in the soil are taking place constantly, but losses, in most cases, far outweigh the additions. Annual loss of soil fertility through erosion and leaching is estimated to be seven times the amount used by all crops.

Erosion and leaching on the harvested acres, according to the National Resources board, cause annual losses of 88,000,000 tons of plant food elements, compared to 10,500,000 tons removed by crops. Erosion and leaching are responsible for 40.3 per cent of the annual loss of organic matter or humus while crops remove only 28.6 per cent.

FARM FINANCE

(From the Second Report of the Director of War Mobilization and Reconversion, April 1, 1945)

WAR FARM INCOME AT ALL-TIME HIGH—

— DEBT, INTEREST, FORECLOSURES DOWN

7. Even so, net income has increased 150% since 1939

8. Pushing up farm land values.

9. Yet farm mortgage debt is at a long-term low,

10. So are (1) average interest rates,

11. And (2) the total interest burden.

12. With income up and interest down, the foreclosure rate is low.

¹ Data are based upon reports from the Farm Credit Administration and were revised for the years 1930-45 to include purchase-money mortgages, and sales contracts as well as regular mortgages.

² Estimates based upon direct reports from life insurance companies, official reports submitted to State insurance commissioners, and "Best's Life Insurance Reports." Data were revised for the years 1930-45 to include sales contracts as well as regular and purchase-money mortgages.

³ Data since 1935 are based upon reports by the Federal Deposit Insurance Corporation for insured commercial banks. Prior to 1935 data are for all open State and national banks.

⁴ Data are based upon reports from the Farm Security Administration, and include data on tenant-purchase and farm enlargement loans, farm development loans, and construction loans to individuals. Loans made for these purposes from Rural Rehabilitation Trust funds are also included.

YOUR CHANCES FOR SUCCESS

The following statistics, prepared by the Savings Banks, and used by the United States Treasury Department, show the progress of 100 men representing an average group of Americans starting out in business or professional careers at the age of 25.

At age 35: 6 have Died; 10 are Wealthy; 10 are Well-to-do; 39 Live on earnings; 35

Have made no Progress.

At age 45: 16 have Died; 1 is Wealthy; 3 are Well-to-do; 65 Live on earnings; 15 Live on Charity.

At age 65: 36 have Died; 1 is Wealthy; 4 are Well-to-do; 5 Live on earnings; 54 Live on Charity.

¹ Charges payable during the year. Excludes amount paid by Secretary of the Treasury to Federal land banks, 1933-43, and Land Bank Commissioner, 1937-43, as reimbursements for interest reductions granted borrowers.

² From farm marketings, including Government payments.

BIRTHS AND DEATHS, BY STATE OF RESIDENCE, 1944

New York ranked first and California second in total number of births to residents in 1944 according to state tabulations by the Bureau of the Census, Department of Commerce. Pennsylvania dropped from second rank in 1943 to third in 1944. Texas ranked fourth in both years.

Only seven states reported an increase in number of births to residents in 1944 over 1943. These were California, Florida, Nevada, New Mexico, North Dakota, Texas and Washington.

Eight states reported increases in total number of deaths of residents between 1944 and 1943 according to the Census Bureau tabulation. These were Arizona, California, Florida, Montana, Nevada, New Mexico, South Dakota, and Wyoming.

The infant mortality rate declined between 1943 and 1944 for 31 states and the District of Columbia, lowering the national rate from 40.4 per 1,000 live births in 1943 to 39.8 per 1,000 live births in 1944.

BABY BONUSES IN RUSSIA

Baby bonuses to mothers of three or more children are credited with raising Russia's 1944 birth rate by one-third despite wartime conditions.

During the first nine months of 1945, the Russian birth rate jumped 35.3 per cent following a 1944 bonus decree issued by the

commissariat of public health.

Pre-war 1935-39 statistics listed Russia's birth rate at 44.1 per 1,000 persons. The U. S. rate for the same period was 17.1. Russia's last Census, 1939, showed a total population of 183,736,286.

¹ Does not include dairy production payments since October 1943.² Revised.³ Preliminary

THE PROBLEM OF SOIL CONSERVATION

Nearly two-thirds of the total area of the country exclusive of city and water territory is in some degree affected by erosion. Enough land has been permanently ruined by erosion within the past hundred years to equal an area equivalent to all farming land in two large midwestern agricultural states.

Gully erosion has caused severe damage generally on approximately 337,000,000 acres, with about 4,000,000 acres so badly cut up as to be unfit for practical cultivation.

Wind erosion, resulting largely from cultivation, overgrazing, and depletion of the humus supply, has affected about one-sixth of the land area, principally in the semi-arid regions of the Great Plains.

Over much of the Nation's farm-land area, the average depth of the topsoil containing sufficient plant food for economical crop production is only 6 or 7 inches. It has taken nature thousands of years to prepare this layer for productive plant growth.

The damage caused by washing away of the topsoil is further increased by the fact that loss of soil proceeds at a more rapid rate the longer it continues. The top layer of soil contains the largest percentage of humus which, because of its water-absorbing capacity, is one of the important erosion-resisting factors.

Types of Erosion

Sheet erosion, the type that removes a thin layer of the most productive soil from entire exposed, sloping fields, is prevalent in de-

¹ Estimated membership and estimated business for each association is credited to the State in which the association has its headquarters.

² A marketing season includes the period during which the farm products of a specified year are moved into the channels of trade. Marketing seasons overlap.

³ Includes independent local associations, federations, large-scale centralized associations, sales agencies, and independent service-rendering associations.

⁴ Includes members, contract members, and shareholders, but does not include patrons not in these categories. (It should be pointed out that there is some duplication in these membership figures due to the fact that some farmers belong to more than one association.)

⁵ Includes some intra-association transactions.

⁶ Includes the value of commodities for which associations render essential services either in marketing or purchasing and the value of commodities sold by associations either on a commission or a brokerage basis.

⁷ Includes associations handling commodities not specified above, those handling several types of commodities, and those furnishing special marketing or other services.

⁸ After making adjustments for the purchasing business of marketing associations and the marketing business of the purchasing associations it is estimated that the total purchasing business was approximately \$1,010,000,000, 19.6 percent of total farmer cooperative business.

TRANSPLANT 10 MILLION GERMANS

Ten million Germans are being transplanted to new homes by occupation authorities in the Reich, according to the U. S. Army of occupation headquarters. One-fifth of this total must be resettled in the American occupied zone after transportation back to

Germany from Sudetenland and former parts of the Reich now incorporated in Poland. By Oct. 13, 650,000 persons already had been restored to their former homes in the U. S. occupied zone.

¹ Does not include irrigated fallow land or land in young irrigated crops not harvested or in irrigated crops that failed.

² Based on all land in farms for each tenure group.

MOTHER AND INFANT DEATH RATES DECREASE

Maternal and infant death rates in 1944 were the lowest ever recorded in the United States, J. C. Capt, director of the Bureau of the Census, Department of Commerce, has announced.

Maternal deaths dropped 2.3 per 1,000 live births and infant deaths to 39.8 per 1,000 live births. In 1944 the maternal death rate was eight percent lower than in 1943 and the infant death rate was 1.5 percent lower than in 1943.

Maternal deaths in the United States numbered 6,369 in 1944 compared with 7,197 in 1943. The rate in 1944 was 2.3 compared with 2.5 per 1,000 live births in 1943 and with 7.0 in 1929, since which time the rate has de-

clined consistently. Deaths of infants less than one year of age in the United States were 111,127 in 1944 compared with 118,484 in 1943. The infant mortality rate in 1944 was 39.8 per 1,000 live births compared with 40.4 in 1942 and 1943, with 47.0 in 1940 and with 85.8 in 1920.

In 1944, of the 111,127 infant deaths, 90,607 or 81.5 percent were white, the mortality rate being 38.9 per 1,000 live births compared with 37.5 in 1943. The remaining 20,520 infant deaths, 18.5 percent of the total were nonwhite, the mortality rate being 60.3 per 1,000 live births compared with 62.5 in 1943.

Ancient Alliance

Portugal and Great Britain have been concerned with each other's welfare ever since the year 1373, when the two nations signed a mutual-aid pact. Since then, Britain has stood as a defender against attacks on both the homeland and the empire of the Portuguese people. Through its terms, Portugal entered World War I on the side of Britain. In World War II, she maintained a neutrality which was construed as helpful to Britain because it prevented German seizure and use of Portuguese wolfram and other substances valuable in waging war.

1926	4,151,682,049.91	1945	73,067,712,071.39

The figures include postal appropriations chargeable to the postal revenues and estimated amounts under indefinite appropriations and under permanent appropriations (those which recur automatically each year without annual action by Congress).

Appropriations in this table are by sessions of Congress. Fiscal year noted is principal fiscal year for which appropriations are made during a session.

Each session also makes appropriations for prior years to the one stated. For example, appropriations shown for fiscal year 1933 are those for the first session of the 72nd Congress and include \$4,800,731,979.24 for the fiscal year 1933 and the remainder is for 1932 and prior years.

Sources: (1) Total amounts outstanding: Daily Treasury Statements; (2) Securities held by U. S. Government agencies and trust funds: reports of the agencies and accounts with the Treasury; (3) Securities held by Federal Reserve Banks; Federal Reserve System.

¹ Excludes matured securities, and obligations held by the Treasury.

² The total amount of securities held by private investors is calculated by deducting from the total amount of securities outstanding, the securities held by U. S. Government agencies and trust funds and by Federal Reserve Banks.

Newer Coins

The buffalo nickel, with an Indian on the obverse, appeared in 1913. It was designed by J. F. Fraser. In 1916, appeared a half-dollar with the figure of Liberty draped in the flag, walking to the left, and bearing branches of oak and olives. The reverse pictures an eagle with wings raised, grasping a pine branch in its talons. A quarter-dollar in the same year portrays Liberty with shield

and olive branch advancing through a portal. On the reverse is an eagle flying to the right. The 10-cent piece of 1916 pictures a bust of Liberty with winged cap. On the reverse is a fasces entwined with an olive branch.

A new type of silver-dollar was designed by Anthony de Francisci and issued in 1921. It bears a head of Liberty with a crown of light rays. On the reverse an eagle is shown stand-

ing on a mountain, facing the rising sun, with an olive branch in his talons. This is the "Peace" dollar.

A new quarter-dollar, authorized in 1931, portrays Washington by John Flanagan. On the reverse is an eagle, wings spread, standing on a bundle of arrows. Beneath are two sprays of olives.

MONEY AND BANKING

BANKS IN THE U. S. AND POSSESSIONS ON DECEMBER 30, 1944, AND DECEMBER 31, 1943

(Thousands of dollars)

	Dec. 30, 1944	Dec. 31, 1943
Number of banks	14,579*	14,621*

¹ See note 1, p. 775. For figures for years prior to 1913, see annual report for 1928, pp. 554-555.² For description of security held for redemption, see note 2, p. 776.³ Under the order of the Secretary of the Treasury of Dec. 28, 1933, as amended and supplemented on Jan. 11 and 15, 1934, all gold coin domestically owned (with minor exceptions) was required to be delivered for the Treasurer of the United States, and under the Gold Reserve Act of 1934 (Jan. 30) withdrawn from circulation and formed into bars. Gold coin (\$237,000,000) shown on Treasury records as being then outstanding was dropped from the monthly circulation statement as of Jan. 31, 1934.

¹ Does not include gold other than that held by the Treasury.

² These amounts are not included in the total, since the gold or silver held as security against gold and silver certificates and Treasury notes of 1890 is included under gold, standard silver dollars, and silver bullion, respectively.

³ This total includes credits with the Treasurer of the United States payable in gold certificates in (1) the Gold Certificate Fund-Board of Governors, Federal Reserve System, in the amount of \$14,601,019,813, and (2) the redemption fund for Federal Reserve notes in the amount of \$935,094,347.

⁴ Includes \$1,800,000,000 Exchange Stabilization Fund and \$143,991,022 balance of increment resulting from reduction in weight of the gold dollar.

⁵ Includes \$132,000,000 lawful money deposited as a reserve for Postal Savings deposits.

⁶ The amount of gold and silver certificates and Treasury notes of 1890 should be deducted from this amount before combining with total money held in the Treasury to arrive at the total amount of money in the United States.

⁷ The money in circulation includes any paper currency held outside the continental limits of the United States.

NOTE.—There is maintained in the Treasury:—(i) as a reserve for United States notes and Treasury notes of 1890—\$156,039,431 in gold bullion; (ii) as security for Treasury notes of 1890—an equal dollar amount in standard silver dollars (these notes are being canceled and retired on receipt); (iii) as security for outstanding silver certificates—silver in bullion and standard silver dollars of a monetary value equal to the face amount of such silver certificates; and (iv) as security for gold certificates—gold bullion of a value at the legal standard equal to the face amount of such gold certificates. Federal Reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal Reserve Bank. Federal Reserve notes are secured by the deposit with Federal Reserve agents of a like amount of gold certificates or of gold certificates and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act, or, until June 30, 1945, of direct obligations of the United States, so authorized by a majority vote of the Board of Governors of the Federal Reserve System. Federal Reserve banks must maintain a reserve in gold certificates of at least 40 percent, including the redemption fund which must be deposited with the Treasurer of the United States, against Federal Reserve notes in actual circulation. "Gold certificates" as herein used includes credits with the Treasurer of the United States payable in gold certificates. Federal Reserve bank notes and National bank notes are in process of retirement.

BANK CLEARINGS IN BIG UNITED STATES CITIES

CAPITAL ISSUES: SUMMARY BY CLASSES, 1919 TO 1942

Source: Commercial and Financial Chronicle

Note: In millions and tenths of millions of dollars. Data cover domestic and foreign issues in the United States. Preferred stocks of no par value and all common stocks are taken at their offering price, other issues at par, except that in the figures for corporate issues for 1912 to 1918 all stocks are included at their market value. Corporate

issues for 1912 to 1918 exclude real estate offerings and privileged stock subscriptions, included in figures beginning 1919, and issues of less than \$100,000. State and municipal issues include bonds issued by states, territories and possessions, counties and municipalities, and by school and road districts and other independent governmental bodies.

Year	Total issues	New capital	Refund- ing	Total issues, by kinds

*Comprises iron, steel, coal, copper, etc., equipment manufactures, motors and accessories, oil, rubber, and miscellaneous industrials.

†Exclude funds obtained by states and municipalities from agencies of the federal government.

LAST BRITISH OCCUPANCY IN THE UNITED STATES

Chippewa county in Michigan is the last spot in the United States over which the British flag waved (Drummond Island, 1828). Here is the locale of the Tahquamenon falls and the Indian lore out of which Longfellow created his poem "Hiawatha".

THE FEDERAL RESERVE SYSTEM

BOARD OF GOVERNORS: Marriner S. Eccles, Chairman; Ronald Ransom, Vice-Chairman; M. S. Szymczak, John K. McKee, Ernest G. Draper, R. M. Evans.

Elliot Thurston, Assistant to the Chairman, Chester Morrill, Special Adviser to the Board of Governors.

OFFICE OF THE SECRETARY: S. R. Carpenter, Secretary; Bray Hammond, Assistant Secretary.

LEGAL DIVISION: Walter Wyatt, General Counsel, George B. Vest, General Attorney, J. Leonard Townsend, Assistant General Attorney.

DIVISION OF RESEARCH AND STATISTICS: E. A. Goldenweiser, Economic Adviser, Woodlief Thomas, Director, Howard S. Ellis, Assistant Director.

DIVISION OF EXAMINATIONS: Leo H. Paulger, Director, C. E. Cagle, Assistant Director, William B. Pollard, Assistant Director.

DIVISION OF BANK OPERATIONS: Edward L. Smead, Director, J. R. Van Fossen, Assistant Director, J. E. Horbett, Assistant Director.

DIVISION OF SECURITY LOANS:

Carl E. Parry, Director, Bonnar Brown, Assistant Director.

DIVISION OF PERSONNEL ADMINISTRATION: Robert F. Leonard, Director.

DIVISION OF ADMINISTRATIVE SERVICES: Liston P. Bethea, Director, Fred A. Nelson, Assistant Director.

OFFICE OF ADMINISTRATOR FOR WAR LOANS: Edward L. Smead, Administrator, Gardner L. Boothe, II, Assistant Administrator.

FISCAL AGENT: O. E. Foulk, Fiscal Agent, Josephine E. Lally, Deputy Fiscal Agent.

FEDERAL ADVISORY COUNCIL: Chas. E. Spencer, Jr., Vice President, Boston District, John C. Traphagen, New York District; William F. Kurtz, Philadelphia District; John H. McCoy, Cleveland District; Robert V. Fleming, Richmond District; Keehn W. Berry, Atlanta District; Edward E. Brown, President, Chicago District; Ralph C. Gifford, St. Louis District; Julian B. Baird, Minneapolis District; A. E. Bradshaw, Kansas City District; Ed. H. Winton, Dallas District; George M. Wallace, San Francisco District; Walter Lichtenstein, Secretary.

¹ "Balances with foreign banks" are included in "balances with domestic banks" prior to May 4, 1920, and in "other assets" from May 4, 1920, to December 31, 1926.

FIRST NORMAL SCHOOL IN THE UNITED STATES

The first normal school in the United States was founded in 1837 at Lexington, Mass., by colleagues of Horace Mann. A law permitting it to operate was passed by the Massachusetts legislature in 1838 and the school opened the following year.

PICTURES AID ALLIES

More than 90 per cent of what the Allies learned about the enemy during the war came from aerial photographs.

FEDERAL RESERVE SYSTEM — ALL MEMBER BANKS

* This table excludes mutual savings banks. Deposit figures for suspended banks are not available prior to 1921.

* The figures for 1892 and 1900-1919 are for years ending June 30; for 1893, for the 14 months ending August 31; for 1894-1899, for years ending August 31; and for 1920, for the 18 months ending, December 31, 1920. For 1921-1941 the figures for private banks, as for all other classes of banks shown in this table, are for twelve-month periods ending December 31.

* Figures are from the *Annual Report of the Federal Deposit Insurance Corporation* for 1940, p. 66, except the figure for 1941, which is an unpublished estimate of the Corporation. For the years 1935-1941; the figures include some losses in insured banks which were not classified as bank suspensions, but which were merged with the financial aid of the Federal Deposit Insurance Corporation. For the same period, the figures also include about 47 million dollars of losses borne by the Federal Deposit Insurance Corporation. Prior to 1921, figures on estimated losses borne by depositors are available by periods as follows: 1881-1900, 93 million dollars; 1901-1920, 139 million dollars (*Annual Report*, p. 62).

FEDERAL FARM MORTGAGE CORPORATION

Management of the corporation is vested in a board of directors consisting of the secretary of the treasury, or a treasury officer designated by him, the governor of the Farm Credit administration, and the land bank commissioner.

Capital shall be in the sum of \$200,000,000 subscribed by the governor of the FCA on behalf of the United States in such amounts and at such times as he believes necessary.

With the approval of the secretary of the treasury, the corporation is authorized to issue and have outstanding at one time bonds not exceeding in amount \$2,000,000,000.

The corporation may exchange these bonds upon application of any federal land bank, for consolidated farm loans of equal face value issued under the federal farm loan act, and may exchange such consolidated farm loan bonds held by it for bonds of the corporation of equal face value.

The Corporation also can purchase from time to time for cash, consolidated farm-loan bonds at prices and terms approved by the board of directors of the corporation, to make loans to federal land banks on the security of such consolidated bonds, and to invest its funds in mortgage loans.

¹ For June 1914 (before the Federal Reserve Banks commenced operation), the figures for "member" banks represent all national banks in the continental United States, while those for "non-member" banks represent all State banking institutions (excluding unincorporated or "private" banks not reporting to State banking authorities) in the continental United States.

² Beginning with June 1928 the figures previously published have been revised to include certain large private banks which did not report to State banking authorities until 1934.

³ For 1941 the member bank figures and the insured mutual savings bank figures both include three member mutual savings banks with total deposits of \$7,736,000 in June 1941 and \$3,009,000 in December 1941, which became members of the Federal Reserve System during 1941. These banks are not included in the total for "commercial banks" and are included only once in the total for "all banks."

ADJUSTED DEPOSITS OF ALL BANKS AND CURRENCY OUTSIDE BANKS, 1892-1944

DESIGNS OF UNITED STATES COINS

The first coins minted in the United States were cent and half-cent pieces, appearing in 1793, with a bust of Liberty on one side imitating Dupre's bust commemorating the victories of Saratoga and Yorktown. On the reverse was a statement of the value of the coin. The original law required that gold and silver coins must bear an impression emblematic of liberty on one side, and bear the word "Liberty," and on the reverse there was to be the representation of an eagle,

bearing the inscription, "United States of America." As many as 16 stars also were used—one for each state.

On earlier coins there is no symbol of war or peace which later became quite common. In 1795, a second reverse die was used, representing the Great Seal of the United States, though the eagle has the arrows and olive branch in reversed position, where it remained until 1907.

STOCK EXCHANGE COMMISSIONS AND TERMS

Members of an exchange derive their income in commissions from their customers. Commission rates charged on the Chicago Stock exchange are as follows for each 100 shares of stock bought or sold:

Stocks selling below \$10 per share. \$ 7.50
 Stocks selling from \$10 to \$25 per share. . . 12.50
 Stocks selling from \$25 to \$50 per share. . . 15.00
 Stocks selling from \$50 to \$75 per share. . . 17.50
 Stocks selling from \$75 to \$100 per share. . . 20.00
 Stocks selling from \$100 to \$200 per share. . . 25.00

A **specialist** is a broker who confines his floor activities to a list of securities assigned to him by the committee on odd lots and specialists. His chief function is to fill orders in these securities from other brokers.

On the Chicago Stock exchange, 100 shares is the unit of trading for active stocks. This unit is termed a "**round lot**." Fifty shares

are a **clearing lot**, which is the minimum amount that can be cleared through the clearing house. Less than 50 shares is an **odd lot**.

The unit of trading for inactive stocks is ten shares, and anything less than ten shares is an odd lot.

Buying on margin is purchasing securities by making partial payment and borrowing the remainder of the purchase price from the broker, who holds the securities as **collateral**.

Selling short is selling securities one may not have available for immediate delivery, or may not own; in the latter case expecting to buy later at a lower price. The broker makes delivery by borrowing the security and depositing its market price with the lender.

Getting Bored?

Hens usually achieve their highest performance of egg-laying in their first year of production. A drop of 20 per cent for each year after that has been noted. So, if a hen

lays 200 eggs in her first year, she will probably produce only 160 eggs the second year, 128 the third year, and so on.

STOCK EXCHANGE RATES AND TERMS

A stock exchange ordinarily is an **unincorporated** mutual association of men who maintain a market place for **listed** stocks and bonds. In a stock exchange, securities representing ownership in and obligations of going business units are bought, sold, and delivered. The exchange is owned by its members.

Stock exchanges provide a continuous and public market for those who wish to buy or sell securities, and supervise their members so that the public is assured of fair and honest treatment. Exchanges require full information of a company's affairs at the time application is made to list its securities, and periodically thereafter. Listed securities, because of these requirements, and because there always is a market for them, are more desirable as collateral than unlisted securities. Exchanges give publicity to the value of their securities.

Expenses of stock exchanges are paid from dues received from members, and listing fees paid by corporations listing their securities on the exchange. Only **listed securities** can be bought and sold on an exchange. A **listed security** is one that has met the approval of the various committees of the exchange, and has been registered under the Securities Exchange act of 1934 by the Fed-

eral Securities and Exchange commission.

Validity and legality of listed securities must be approved by competent legal counsel. To safeguard against the issue of unauthorized stock, companies listing securities must appoint as a registrar an independent, responsible trust company.

Securities may not be listed coincident with a public offering but only when the company demonstrates that they are sufficiently distributed to the public to assure a free and open market.

All securities sold on a given day are delivered and paid for on the day following, on the Chicago Stock exchange, unless special provisions are mutually agreed upon between buyer and seller for delayed delivery at the time the sale is made.

Brokerage firms that are members of the Chicago Stock exchange are all partnerships, in order to make every dollar owned by every partner a protection back of the customer. Corporations, their officers, or employees, cannot be members because they have only limited liability. Members of exchanges are supervised and required to abide by rules which are enforced. Only members are permitted to execute orders on the floor of an exchange, in order to guarantee financial responsibility.

Gold Output

It takes 125,000 tons of rock to yield one ton of gold. South Africa's gold output has totaled several billion dollars in the last 60 years. Before the war, her gold industry was producing up to 300 tons a year. The

particles of gold mined are so tiny that they are scarcely visible, and are distributed throughout the rock which must be crushed to release them.

NOTE—Averages for dentists under 25 years of age were not calculated for size of community because of the small number of returns.

HUNTERS AND HARVEST MOON

The full moon nearest to Sept. 21 is popularly known as the "harvest moon." This is because the moon then rises for several consecutive evenings at nearly the same hour, giving an unusual number of

moonlight evenings. This is most noticeable in higher latitudes and can not be seen at the equator. The "hunter's moon" is the first full moon following the harvest moon and is also more noticeable in higher latitudes.

Note. The number in independent practice includes all physicians deriving more than one-half of their total net income from independent practice. Total income and pay-roll figures include gross and net income as well as pay-roll expense both for physicians earning all their professional income from independent practice and for part-salaried physicians. Average income and pay-roll series represent the average income and pay-roll expense of physicians earning their entire professional income from independent practice.

GOLD AND SILVER

HOW GOLD IS VALUED AND STORED

Source: Director of the U. S. Mint.

The monetary value or price of gold in the United States is \$35 per fine troy ounce which is explained as follows: The dollar, the standard unit of value, is legally defined as 15 5/21 grains of gold 9/10 fine—fixed by Presidential Proclamation January 31, 1934 under authority of the Gold Reserve Act of 1934 (as amended). One dollar (the unit of value) therefore contains 13.71428+ grains of fine or pure gold and on such basis 480 grains, or a troy ounce, is valued at \$35, the price paid by the Treasury for gold and the value per troy ounce of U. S.

Government gold stock. The gold stock is stored in form of bullion cast into bars of various sizes, 400 ounce bars (world market size) being the most predominant. A 400-ounce bar is about 3 1/4 inches wide, 6 1/2 inches long and 1 1/4 inches thick, and if expressed in avoirdupois pounds would weigh approximately 27 pounds. On June 30, 1945 U. S. government gold stock totaled 577,512,303.3 troy ounces of fine or pure gold valued at \$20,212,930,614.08, an equivalent of over 19,800 tons avoirdupois weight.

NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cabled prices from London to the Bureau of the Mint, from 1897 to 1914 from daily London quotations, and since from daily New York quotations.

Return to Bust Portrayals

The silver dollar of 1878 and the half-dollar, quarter and dime of 1892 returned to the simple bust instead of the full-seated figure. On the smaller coins the Great Seal was used.

The devices on the gold coins of the 20th century were by the sculptors Saint Gaudens and Bela L. Pratt, and depart from established traditions. The Indian head, originally designed for a one-cent coin, is on three of the gold coins. A standing figure of Liberty is used on the double eagle, while the eagle itself is not standing on the olive branch and arrows as on the other coins. Instead, Liberty holds in her left hand the olive, in her right, instead of arrows, the torch of progress.

Cent Made Smaller

The original differentiation in design between types of coins of different metals soon disappeared. In 1840, the silver dollar, not coined for 36 years, was restored, with a seated figure of Liberty designed by Christian Gobrecht. A new copper cent first issued in 1856 was 5/16 of an inch smaller than the old penny, and weighed 72 grains compared with the 1792 cent of 264 grains, reduced to 168 grains in 1795. This "White cent" contained 12 per cent nickel and bore a flying eagle in 1856, 1857, and 1858, when it was replaced by the Indian-head cent, in use until 1909, when V. D. Brenner's bust of Lincoln appeared.

First coinage of a double-eagle and a gold dollar was authorized in 1849, when James B. Longacre designed a bust of Liberty for the new coins.

PRODUCTION OF GOLD AND SILVER IN THE U. S. SINCE 1792

¹ For 1934 and thereafter includes silver bullion revalued to \$1.29 + per fine troy ounce and set up as security against silver certificates.

² On Jan. 31, 1934, the weight of the gold dollar was reduced from 25.8 grains of gold nine-tenths fine to 15 5/21 grains nine-tenths fine, thereby giving gold a monetary value of \$35 per fine troy ounce, which compares with the previous \$20.67 + per fine troy ounce. Proclamation of Jan. 31, 1934.

WORLD PRODUCTION OF GOLD AND SILVER BY YEARS

¹ Valued, prior to 1934, at \$20.67 plus per fine ounce; 1934 and thereafter at \$35 per fine ounce.

² Valued, prior to 1701, at \$1.38 per fine ounce, which corresponds with a commercial ratio of silver to gold of approximately 15 to 1, which prevailed over 100 years subsequent to 1687. From 1841 the annual averages per fine ounce in London are used except for the years 1915 to 1921 and 1931 to 1934, when New York prices are used because the London prices were not equivalent to gold. From 1701 to 1840, the price corresponds with the average ratios of silver to gold.

³ Preliminary.

¹ Data for 1932 and 1925 are adopted from Twentieth Century Fund, Inc., *Facing the Tax Problem* (New York, 1937), pp. 578-79.

Ahead of Time

The Swedish scientist Arrhenius was awarded the Nobel prize for his thesis on electricity. But 19 years before that, when he had submitted the same thesis for a doctor's degree, it was given the lowest grade that could be granted without refusing it entirely.

Intensive Farmers

Three crops of rice annually are raised by Balinese farmers, probably the most intensive agriculturists in the world. Their rice paddies rise in terraces from warm valley floors to the high slopes of hills, giving somewhat the effect of hanging gardens, seen

from a distance. Also grown in quantity in Bali are sugar cane, coffee, tobacco, indigo and cotton. Varieties of fruits are grown, as are European vegetables in the uplands. Coconut palms and Tamarinds are common trees.

VALUES OF FOREIGN MONETARY UNITS (At Par As Regards Gold Units; Nongold Units Have No Fixed Par With Gold)

Source: U. S. Treasury Dept. (as of April 1, 1945)

Country	Monetary unit	Value in terms of U. S. money	Remarks
Argentina Republic	Peso	\$1.6335	Given valuation is of gold peso. Paper nominally convertible at 44% of face value. Conversion suspended Dec. 16, 1929.
Australia	Pound	8.2397	Control of gold stocks and exports authorized Dec. 17, 1929.
Belgium	Belga	.1695	By decree of Mar. 31, 1936. One belga equals 5 Belgian francs. The Anglo-Belgian financial agreement of June 7, 1940, fixed the rate of exchange of the Belgian franc and the franc of the Belgian Congo at 176.625 francs for £1 sterling.
Bolivia	Boliviano	.6180	Conversion of notes into gold suspended Sept. 23, 1931.
Brazil	Cruzeiro (Milreis)	.2025	Decree law of October 6, 1942, established the cruzeiro as the unit of currency, replacing the milreis. Official rate for cruzeiro in terms of the dollar, announced by the Bank of Brazil, is \$0.0606. Conversion of Stabilization-Office notes into gold suspended Nov. 22, 1930.
British Honduras	Dollar	1.6931	Conversion of notes suspended.
Bulgaria	Lev	.0122	Exchange control established Oct. 15, 1931.
Canada	Dollar	1.6931	Embargo on export of gold, Oct. 19, 1931; redemption of Dominion notes in gold suspended Apr. 10, 1933.
Chile	Peso	.2060	Given valuation is of gold peso. Gold pesos are received for conversion at the rate of 4 paper pesos for 1 gold peso. Conversion of notes suspended July 30, 1931.
China	Yuan		Silver standard abandoned by decree of Nov. 3, 1935; bank notes made legal tender under Currency Board control; exchange rate for yuan fixed at 20 to the U. S. dollar by Stabilization Board of China, July 10, 1942.
Colombia	Peso	.5714	Obligation to sell gold suspended Sept. 24, 1931. New gold content of 56424 grams of gold $\frac{9}{16}$ fine established by monetary law of Nov. 19, 1938, effective Nov. 30, 1938.
Costa Rica	Colon	.7879	Conversion of notes into gold suspended Sept. 18, 1914; exchange control established Jan. 16, 1932.
Cuba	Peso	1.0000	By law of May 25, 1934.
Czechoslovakia	Koruna	.4537	Conversion of notes into gold suspended Sept. 29, 1931.
Denmark	Krone	1.6931	U. S. money is principal circulating medium.
Dominican Republic	Dollar	.3368	Conversion of notes into gold suspended Feb. 9, 1932.
Ecuador	Sucre	8.3682	Conversion of notes into gold suspended Sept. 21, 1931.
Egypt	Pound (100 piasters)	.4357	Conversion of notes into gold suspended June 25, 1933.
Estonia	Kroon	.0426	Conversion of notes into gold suspended Oct. 12, 1931.
Finland	Markka		Provisions of monetary law of Oct. 1, 1936, providing for gold content of franc, superseded by decree of June 30, 1937, which stated that the gold content of the franc shall be fixed ultimately by a decree adopted by the Council of Ministers.
France	Franc		Until issuance of such decree a stabilization fund shall regulate the relationship between the franc and foreign currencies.
Germany	Reichsmark	.4033	Exchange control established July 13, 1931.
Great Britain	Pound Sterling	8.2397	Obligation to sell gold at legal monetary par suspended Sept. 21, 1931.
Greece	Drachma	.0220	Conversion of notes into gold suspended Apr. 26, 1932.
Guatemala	Quetzal	1.6931	Conversion of notes into gold suspended Mar. 6, 1933.
Haiti	Gourde	.2000	National bank notes redeemable on demand in U. S. dollars.
Honduras	Lempira	.8466	Gold exports prohibited Mar. 27, 1931; lempira circulates as equivalent of half of U. S. dollar.
Hong Kong	Dollar		Treasury notes and notes of the three banks of issue made legal tender by silver nationalization ordinance of Dec. 5, 1935; exchange fund created to control exchange rate.
Hungary	Pengö	.2961	Exchange control established July 17, 1931.
India (British)	Rupee	.6180	Obligation to sell gold at legal monetary par suspended Sept. 21, 1931.
Indo-China	Piaster		Piaster pegged to French franc at the rate of 1 piaster = 10 French francs; conversion of notes into gold suspended Oct. 2, 1936.

Country	Monetary unit	Value in terms of U. S. money	Remarks
Ireland	Pound	8.2397	Conversion of notes into gold suspended Sept. 21, 1931.
Italy	Lira	0526	New gold content of 46.77 milligrams of fine gold per lira established by monetary law of Oct. 5, 1936.
Japan	Yen	8440	Embargo on gold exports Dec. 13, 1931.
Latvia	Lai		Currency pegged to sterling Sept. 28, 1936, at 2,533 laivi=£100; on Sept. 13, 1939, a law was passed providing that if the pound sterling should depreciate by more than 5 percent with respect to the United States dollar, or the Swedish krona, the Bank of Latvia shall take steps to keep the rate of exchange of the lai stable by basing it on gold or some other monetary unit.
Liberia	Dollar	1.0931	U. S. money is principal circulating medium.
Lithuania	Litas	1693	Free export of gold suspended Oct. 1, 1935.
Mexico	Peso		Decree of Aug. 28, 1936, left the monetary unit, the peso, to be later defined by law.
Netherlands and colonies	Guilder (florin)	6806	Suspension of convertibility of notes into gold and restrictions placed on free gold exports—Sept. 26, 1936; gold export prohibition repealed by decree June 28, 1938; prohibition restored by Act of Nov. 25, 1938. The Anglo-Netherlands financial agreement of June 14, 1940, established the official rate of exchange between the Netherlands Indies guilder and the pound sterling at 7.60 guilders for £1 sterling. By act of September 20, 1940, the Netherlands Indies Vulkraad decided, subject to later ratification by law, that the Java Bank shall fix the value of its stocks of gold coin and bullion at Fl. 2.121 per kilogram fine.
Newfoundland	Dollar	1.6931	Newfoundland and Canadian notes legal tender.
New Zealand	Pound	8.2397	Conversion of notes into gold suspended and export of gold restricted, Aug. 5, 1914; exchange regulation Dec. 1931.
Nicaragua	Coricoba	1.6933	Embargo on gold exports Nov. 13, 1931.
Norway	Krone	1.4537	Conversion of notes into gold suspended Sept. 29, 1931.
Panama	Balboa	1.0000	U. S. money is principal circulating medium.
Paraguay	Guarani		New unit established by decree law Oct. 5, 1943, effective 30 days later; not tied to gold. Certain prior dated obligations, etc., expressed in the gold peso (oro sellado) are converted as equivalent to 1/4 Guarani. Initial exchange rate fixed by Bank of the Republic of Paraguay at 1 Guarani equals U. S. \$0.3255. Exchange control established June 28, 1932.
Persia (Iran)	Rial	0824	Conversion of notes into gold suspended May 18, 1932; exchange control established Jan. 23, 1945.
Peru	Sol	4740	By act approved Mar. 16, 1935.
Philippine Islands	Peso	5000	Exchange control established Apr. 27, 1936.
Poland	Zloty	1899	Gold exchange standard suspended Dec. 31, 1931.
Portugal	Escudo	0749	Gold exchange control established May 18, 1932.
Rumania	Leu	0101	Conversion of notes into gold suspended Oct. 7, 1931.
Salvador	Colon	8466	Exchange control established Apr. 27, 1936.
Spain	Peseta		British pound sterling and Straits dollar and half dollar legal tender.
Straits Settlements	Dollar	9613	Conversion of notes into gold suspended Sept. 29, 1931.
Sweden	Krona	4537	Order of Federal Council enacted Sept. 27, 1936, instructed the Swiss National Bank to maintain the gold parity of the franc at a value ranging between 190 and 215 milligrams of fine gold.
Switzerland	Franc		Conversion of notes into gold suspended May 11, 1932.
Thailand (Siam)	Baht (Tical)	7491	100 piastres equal to the Turkish £; conversion of notes into gold suspended 1916; exchange control established Feb. 26, 1930.
Turkey	Piaster	0744	Conversion of notes into gold suspended Dec. 28, 1932.
Union of South Africa	Pound	8.2397	One chervonetz equals 10 rubles. Notes not convertible into gold.
Union of Soviet Socialist Republics	Chervonetz	8.7123	
Uruguay	Peso	6553	Conversion of notes into gold suspended Aug. 2, 1914; exchange control established Sept. 7, 1931. New gold content of .585018 grams of pure gold per peso established by monetary law of Jan. 12, 1938.
Venezuela	Bolivar	3287	Exchange control established Dec. 12, 1936.
Yugoslavia	Dinar	0298	Exchange control established Oct. 7, 1931.

PUBLIC HEALTH

EXPECTATION OF LIFE IN THE UNITED STATES

Source: United States Life Tables

Period	Area	Expectation of Life at Birth	
		White Male	White Female
1900 to 1902	Original Registration States	48.23	51.08
1901 to 1910	Original Registration States	49.32	52.54
1909 to 1911	Original Registration States	50.23	53.62
1919 to 1921	Registration States of 1920	56.34	58.53
1920 to 1929	Registration States of 1920	57.85	60.62
1929 to 1931	Original Registration States	58.57	62.14
1929 to 1931	Registration States of 1920	59.06	62.65
1929 to 1931	Continental United States	59.12	62.67
1939 to 1941	Continental United States	62.81	67.29

Original registration states include: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, Indiana, Michigan, New York, New Jersey and the District of Columbia.

Registration states of 1920 were all states except: West Virginia, Georgia, Alabama, Arkansas, Oklahoma, Texas, New Mexico, Arizona, Iowa, North Dakota, South Dakota, Wyoming, Idaho and Nevada.

LIFE EXPECTANCY BY AGES

Source: U. S. Bureau of the Census. The last column shows life expectancy according to the American Experience Table of Mortality which is used by a majority of American life insurance companies.

	Of 100,000 born alive				Mortality Rate		Average number		American Experience Table of Mortality
	Number alive at beginning of year of age		Number dying during year of age		Number dying per 1,000 alive at beginning of year		of years of life remaining at beginning of year of age		
Age Under 1	Male	Female	Male	Female	Male	Female	Male	Female	
0	100,000	100,000	6,232	4,963	62.32	49.63	59.12	62.67	
1	93,768	95,037	931	835	9.93	8.79	62.04	64.93

.....Information not available or possibly non-existent.

*Provisional.

Figures from official sources.

†The United States birth-registration area when established in 1915 included ten states and the District of Columbia; additional states were added as they fulfilled requirements until in 1933 it comprised the entire continental United States.

‡The birth-registration area of 1921, exclusive of South Carolina, included 26 states and the District of Columbia each year.

France is omitted because, under its three-day registration law the rates between still births and subsequent deaths cannot be determined.

SHOPPING LIST FOR EXPECTANT MOTHERS

Source: American Medical association

(Articles marked with an asterisk (*) should be on hand when baby comes. Other articles may be purchased later. Quantities stated are the minimum; more would be desirable.)

- *3 Abdominal binders
- *3 Vests, or shirts
- *3 Gertrudes
- *3 Nighties
- *3 Pairs hose (optional)
- 2 Pairs booties
- 1 Pair shoes
- *24 Diapers
- *1 Nainsook skirt
- *4 Plain slips
- *2 Fancy dresses (optional)
- *2 Cashmere or crocheted wrappers (opt'l)
- 2 Short jackets
- *1 Baby bunting or other outdoor garment
- 1 Baby carriage
- 1 Carriage robe, or blanket

- 1 Hot water bag
- *1 Bassinet (and later, a crib)
- *2 Pairs of sheets
- *1 Rubber sheet, 36x36 inches
- *2 Pairs of crib blankets
- *1 Crib pillow
- *2 Pairs pillow cases
- *3 Quilted crib pads
- *1 Toilet basket containing soap, talcum powder, vaseline and other toilet requisites
- *4 Wash cloths
- *4 Baby towels
- 1 Bath apron for mother
- *1 Chiffonier (hamper) for baby's clothes
- Several drying forms for underwear and hose

Danger Signs of Pregnancy

The prospective mother should call her doctor at once if she has:

1. Pain of any kind
2. Bleeding, even a little, from any place
3. Scanty urine or painful urination
4. Vomiting or nausea
5. Headache
6. Anything wrong with the sight, especially spots before the eyes
7. Dizziness or fainting
8. Difficulty with breathing
9. Swelling of feet, legs or face
10. Constipation
11. Backache
12. Also when she feels that anything is not as it should be, or when something happens that she does not understand.

Venereal Disease

TREND OF SYPHILIS AND GONORRHEA IN THE UNITED STATES

Prepared for the National Almanac by the U. S. Public Health Service

Syphilis

1. Prevalence. Prevalence is the number of cases of syphilis existing at any one time. Syphilis is a chronic disease the existence of which can be determined by a serological test after all other symptoms have disappeared. Unless adequate treatment is administered, preferably in the early stages of the infection, the disease will generally persist through the life time of the individual. The prevalence, therefore, does not indicate the number of attacks occurring at one time, but is accumulation of the number of attacks that have occurred in the tested population from birth to the age at which the test is made. Differences in prevalence rates among various segments of the population may not accurately measure the number of attacks which may have occurred. Where adequate treatment facilities are available (both public and private), the prevalence may be lowered because more persons acquiring syphilis will have negative serologies as the result of treatment than in areas where treatment facilities are not readily available to the whole population.

Selective Service physical examination of upwards of 15 million men of military ages has provided the first comprehensive statement of the relative prevalence of syphilis in the male population. Analysis of the results of the first 2 million physical examinations indicates that the prevalence rate among males between the ages of 21 to 35 is 47.7 per thousand. The highest rates occurred in the fifteen Southern States and the District of Columbia; the lowest rates in the New England States. The prevalence rate in the fifteen Southern States and the District of Columbia is more than four times that occurring among males in the twenty-nine Northern States. The rate among negro population is 272 per thousand; among white males, it is 23.5 per thousand. Contrary to previous conceptions, there is no significant difference in the prevalence of syphilis in male population in the urban and rural areas. In rural areas, it is 49.4 per thousand; in urban areas, 46.5 per thousand.

Syphilis is known to be less prevalent among persons under 21 years of age, and more prevalent in the group older than 35. The rate of 47.7 per thousand among males between the ages of 21 through 35 cannot be applied to the entire population. There is no body of data comparable to Selective Service statistics to estimate the prevalence of syphilis among other age groups or among the female population. The rate among males between the ages of 21 through 35 indicates the magnitude of the public health problem created by syphilis.

2. Incidence. Incidence is the number of new cases occurring within a given period of time. It is estimated that approximately 220,000 new cases occur in the United States each year, principally in the age group between 18 and 27. Selective Service physical examinations indicate that contrary to expectation, the incidence rate has not increased in the male population during the war years of 1942 and 1943.

As indicated by mortality statistics, the in-

cidence of congenital syphilis throughout the nation has declined steadily during the last ten years and precipitously during the past five years. Infant death rate per 1,000 live births attributed to syphilis declined from .79 in 1933 to .25 in 1943. The decline in congenital syphilis may be attributed to the effectiveness of the Venereal Disease Control programs of the various States.

The effectiveness of the Public Health Program is also reflected in the decline of mortality rates for general paralysis of the insane or paresis which is caused directly by syphilis. The reported death rate per 100,000 for general paralysis has declined steadily since 1922. In 1926, it reached 6.2, its lowest point since 1910, and fell continuously thereafter until 1942 when it reached a low of 3.2.

The declines in congenital syphilis and the incidence of paresis are not necessarily associated with a decline in the total incidence of syphilis in adult population. Congenital syphilis can be prevented by the treatment of syphilitic mothers during pregnancy, and the occurrence of late manifestations of syphilis, such as paresis, may be prevented through the treatment of the disease in the early stages and through improved therapy after symptoms of paresis have developed.

3. Treatment. Important advances in the treatment of syphilis have been made since 1938. Penicillin has been found to be effective in the treatment of some cases of syphilis. Present indications are that the administration of penicillin in amounts sufficient to maintain the penicillin content of the blood at the therapeutic levels for a period approximately fourteen days with limited amount of arsenoxide and interim bismuth may be as effective a treatment for syphilis in its early stages, as weekly injections of arsenoxides and bismuth taken over a period of eighteen months. Much work remains to be done before the final evaluations of penicillin in the treatment of syphilis is complete.

Present schedules of penicillin therapy require injections of the drug at not more than three-hour intervals. This necessitates hospitalization of the patients. Public health authorities have generally adapted their public treatment facilities to meet this advance in treatment. There are now forty-six hospitals in twenty-nine states which are maintained for the treatment of patients with venereal disease; five additional states provide state-wide facilities for the in-patient care of syphilis patients through bed contracts with general hospitals. From the beginning of hospital operations through October 1945, 211,542 patients were treated in these facilities, approximately half of whom were treated for syphilis and the remaining for gonorrhea or other venereal diseases. During October 1945, 9160 syphilis patients were admitted to these facilities, a rate equal to 110,000 admissions per annum.

The in-patient treatment of syphilis patients has also had epidemiologic significance. It has been the experience that when treatment is administered by clinics on an out-patient basis, only approximately 25%

of the cases receive protective treatment. Many of these cases are infectious at the time they discontinue treatment. By hospitalizing infectious cases, the percentage receiving complete treatment rises from 25% to almost 100%.

Gonorrhea

1. **Incidence.** No reliable data comparable to Selective Service system of records exist for estimating the prevalence of gonorrhea. Gonorrhea moreover is a self-limited disease of relatively short duration, consequently, the prevalence rate more nearly approaches the incidence rate than is the case of syphilis. Morbidity reporting of gonorrhea to health departments is not considered to be as complete as the reporting of syphilis. During the 12-month period ending June 30, 1945, 301,828 cases of gonorrhea were reported to health departments in the United States, territories and possessions. It is questionable whether this number is representative of the cases of gonorrhea actually occurring during this period. It is known that the incidence of gonorrhea was more than ten times as great in the Army

and Navy as the incidence of syphilis; however, the cooperative control program of the armed forces and civilian authorities kept the infection rate well below that experienced during World War I.

2. **Treatment.** The advances made in the treatment of syphilis have also been paralleled in the treatment of gonorrhea. In 1938 and 1942, the sulfonamide drugs were successful in the treatment of 70 to 80% of the cases of gonorrhea, but since that time the predominance of sulfa-resistant strains of the gonococcus has greatly decreased the proportion of successful results. Present indications are that penicillin is more effective than are sulfonamides in controlling gonorrheal infections since no resistance to this drug has as yet appeared. Penicillin treatment for gonorrhea does not necessitate hospitalization. It can be administered in out-patient clinics or in doctors' offices over a period of three hours in sufficient quantities to effect a cure in approximately 90% of the cases. This again has epidemiologic significance in that the period of infectiousness is greatly reduced by penicillin therapy as compared with older methods of treatment.

Tentative goal toward which to aim in planning practical diets; can be met by a good diet with a variety of natural foods. Such a diet will also provide other minerals and vitamins, the requirements for which are less well known. This revision at press, August 1945, to be published as National Research Council Reprint and Circular Series No. 122 "Recommended Dietary Allowances, Revised, 1945".

The allowance depends on the relative amounts of vitamin A and carotene. The allowances of the table are based on the premise that approximately two thirds of the vitamin A value of the average diet in this country is contributed by carotene and that carotene has half or less than half the value of vitamin A.

For adults (except pregnant and lactating women) on diets supplying 2,000 calories or less, such as reducing diets, the allowances of thiamine, riboflavin, and niacin may be 1 mg., 1.5 mg., and 10 mg. respectively. The fact that figures are given for different calorie levels for thiamine, riboflavin, and niacin, does not imply that we can estimate the requirement of these factors within 500 calories, but they are added merely for simplicity of calculation. Other members of the B complex also are required, though no values can be given. Foods supplying adequate thiamine, riboflavin, and niacin will tend to supply sufficient of the remaining B vitamins.

There is evidence that the male adult needs little or no iron. The requirement will be provided if the diet is satisfactory in other respects.

For persons who have no opportunity for exposure to clear sunshine and for elderly persons, the ingestion of small amounts of vitamin D may be desirable. Other adults probably have little need for vitamin D.

During the latter part of pregnancy the allowance should increase approximately 20 percent over the preceding level. The value of 2500 calories represents the allowance for pregnant, sedentary women.

Allowances for children are based on the needs for the middle year in each group (as 2, 5, 8, etc.) and are for moderate activity and for average weight at the middle year of the age group.

Needs of infants increase from month to month with size and activity. The amounts given are for approximately 6 to 8 months. The dietary requirements for some of the nutrients such as protein and calcium are less if derived largely from human milk.

RECOMMENDATIONS

In using these dietary recommendations, the National Research Council warns that it is important that the purpose and general policies in formulating them should be understood:

What the Allowances Provide

The allowances for specific nutrients are intended to serve as a guide for planning adequate nutrition for the civilian popula-

tion of the United States. The quantities given were planned to provide not merely the minima sufficient to protect against actual deficiency disease but a fair margin above this to insure good nutrition and protection of all body tissues. Since the actual requirements for these purposes are not known it is recognized that the margins of safety may vary considerably for the different factors. The Board realizes that the values proposed

will need to be revised from time to time as more knowledge of nutritive requirements becomes available.

No Allowances for Losses in Cooking

It should be pointed out that the vitamin figures are calculated requirements for food as eaten and do not allow for losses in cooking. Since such losses may be extensive, especially of the water-soluble vitamins, provision should be made for them in planning practical diets.

Other Factors for which Allowances are not Given

In addition to the three factors of the B complex, included, other members of the group, such as vitamin B₆ and pantothenic acid, should be given consideration. But at the present time no specific values can be given for the amount required in the human dietary. It should be added, however, that foods supplying an adequate amount of thiamin, riboflavin, and niacin (nicotinic acid) will tend to supply an adequate amount of the remaining B vitamins. Similarly, diets providing adequate amounts of protein, calcium, and iron will tend to supply other needed minerals, though these are not listed. There is urgent need for continued research on the requirements for all dietary essentials, especially for children.

Allowances Based on Average Size, Sex, and Activity for Normal Individuals

The allowances for adults are given for the 70 Kg. man and the 56 Kg. woman at three levels of activity. They will need to be proportionately increased or decreased for larger or smaller individuals. It will be noted that the allowances for thiamin, riboflavin, and niacin (nicotinic acid) are proportional to the caloric intake. This relationship has been established for thiamin, and it has been assumed to hold also for riboflavin and nicotinic acid since, like thiamin, they are part of the enzymic system involved in the metabolism of carbohydrate.

The allowances for children are given by age groups, and for boys and girls separately after 12 years, since from that age the growth curves and levels of activity for the two sexes differ. The values presented are in each case for the middle year in the group, and represent amounts needed for children of average size and activity. The needs for individual children may be proportionately larger or smaller depending upon size and activity.

It is to be understood that these allowances are for persons in health, and that needs may vary markedly in disease. For example, in febrile conditions there is usually an increased need for calories, thiamin and ascorbic acid. The need for these or other constituents may also be greatly altered in other diseases, especially those of the alimentary tract, which interfere with normal absorption.

Diet Plans that Meet the Dietary Allowances

In using the recommended allowances it should be emphasized that the amounts of the various nutrients provided for in these recommended allowances, with the exception of vitamin D, can be obtained through a good diet of natural foods including foods like enriched white flour and bread which have been improved according to recommendations of the Board.

The safest way to insure that the dietary allowances are met is to include certain foods in the diet daily in specified amounts.

One dietary pattern which contains a variety of foods commonly available is given below:

List 1.

Milk, 1 pint
Egg, 1 daily, if possible. (On days not used, beans, peanuts, cheese, or more milk or meat to be used instead)
Meat, fish or fowl, 1 or more servings
Potato, 1 or more
Vegetables, 2 or more servings. One green or yellow
Fruits, 2 or more. One citrus fruit or tomato or other good source of vitamin C
Cereals and bread, whole grain or enriched
Other foods as needed to complete the meals.

This list is based on the needs of the average adult. For children the milk needs to be increased but the kinds of foods to include remain the same.

Another list using less milk and lean meat is given as illustrative of the varied ways in which the allowances may be met.

List 2.

Turnip greens, 1 cup
Sweet potatoes, 3
Peanuts, 20 nuts or 2 tablespoons of peanut butter
Beans or cowpeas, 1½ oz.
Tomatoes, 1 cup
Corn meal, 3 oz.
Enriched flour, 3 to 4 oz.
Milk (fresh, evaporated or dried) ½ quart
Lean pork, small serving 3 to 4 times a week
Molasses, fat, etc., to complete the meals

Calculations show that both these lists meet the dietary allowances. It should be pointed out, however, that every food is needed in the amounts specified. If any food is omitted, therefore, it should be replaced by another of equal value.

There are many other combinations of foods that will also cover these allowances. It is expected that nutrition workers in various parts of the country will translate these allowances into appropriate quantities of foodstuffs available in their localities and suited to the income level of the group concerned. Such allowances, expressed in terms of everyday foods, can then be widely used in practical nutrition work.

Further Recommendations

Fat. There is available little information concerning the human requirement for fat. Fat allowances must be based at present more on food habits than on physiological requirements. While a requirement for certain unsaturated fatty acids (the linoleic and arachidonic acids of natural fats) has been amply demonstrated with experimental animals, the human need for these fatty acids is not known. In spite of the paucity of information on this subject there are several factors which make it desirable that fat be included in the diet to the extent of at least 20 to 25 percent of the total calories and that the fat intake include "essential" unsaturated fatty acids to the extent of at least 1 per cent of the total calories. At higher levels of caloric expenditure, e.g., for a very active person consuming 4500 calories and for children and adolescent persons, it is desirable that 30 to 35 percent of the total calories be derived from fat. Since foodstuffs such as meat, milk, cheese and nuts may be expected to contribute "invisible" fat to the extent of from one-half to two-thirds of the total amounts of fat implied by the above proportions of the total calories, it is satisfactory to use separated or "visible" fats such as butter, margarine, lard, and shorten-

ings only to the extent of one-third to one-half of the amounts indicated.

Copper. The requirement for copper for adults is about 1 to 2 mg. daily. Infants and children require approximately 0.05 mg. for each kilogram of body weight. The requirement for copper is approximately one-tenth that for iron. A good diet normally will supply sufficient copper.

Iodine. The requirement for iodine is small, probably about 0.002 to 0.004 mg. daily for each kilogram of body weight, or a total of 0.15 to 0.30 mg. daily for the adult. This need is met by the regular use of iodized salt; its use is especially important in adolescence and pregnancy.

Phosphorus. Available evidence indicates that the phosphorus allowances should be at least equal to those for calcium in the diets of children and of women during the latter part of pregnancy and during lactation. In the case of other adults the phosphorus allowances should be approximately 1.5 times those for calcium. In general it is safe to assume that if the calcium and protein needs are met through common foods, the phosphorus requirement also will be covered, because the common foods richest in calcium and protein are also the best sources of phosphorus.

Vitamin K. The requirement for vitamin K usually is satisfied by any good diet. Special consideration needs to be given to newborn infants. Physicians commonly give vitamin K either to the mother before de-

livery or to the infant immediately after birth.

Salt. The needs for salt and for water are closely interrelated. A liberal allowance of sodium chloride for the adult is 5 grams daily, except for some persons who sweat profusely. The average normal intake of salt is 10 to 15 grams daily, an amount which meets the salt requirements for a water intake up to 4 liters daily. When sweating is excessive, one additional gram of salt should be consumed for each liter of water in excess of 4 liters daily. With heavy work or in hot climates 20 to 30 grams daily may be consumed with meals and in drinking water. Even then, most persons do not need more salt than usually occurs in prepared foods. It has been shown that after acclimatization persons produce sweat that contains only about 0.5 gram to the liter in contrast with a content of 2 to 3 grams for sweat of the unacclimatized person. Consequently after acclimatization, need for increase of salt beyond that of ordinary food disappears.

Water. A suitable allowance of water for adults is 2.5 liters daily in most instances. An ordinary standard for diverse persons is one milliliter for each calorie of food. Most of this quantity is contained in prepared foods. At work or in hot weather, requirements may reach 5 to 13 liters daily. Water should be allowed *ad libitum*, since sensations of thirst usually serve as adequate guides to intake except for infants and sick persons.

HEALTHIEST BOYS AND GIRLS

Source: National Committee on Boys and Girls Club Work

The National Committee on Boys and Girls Club Work annually conducts contests to determine the healthiest boys and girls among 4-H club members. The insignia of the 4-H clubs is the four-leaf clover and the 4-Hs are the head, heart, hands and health. National winners in the annual contests to date have been:

1929—Boy	Harold Deatline, Indiana.
Girl	Florence Smock, Florida.
1930—Boy	William Bodenhamer, Missouri.
Girl	Marian E. Syndergaard, Iowa.
1931—Boy	William Sanders, Indiana.
Girl	Gertrude Heikes, Nebraska.
1932—Boy	Ross Allen, West Virginia.
Girl	Dorothy Eiker, Minnesota.
1933—Boy	Glen L. Sherwood, Kansas.
Girl	(Shirley Caroline Drew, Missouri.
(tie)	Clista Millsapugh, Iowa.
1934—Boy	Leland Monasmith, South Dakota.
Girl	Doris Louise Paul, Iowa.
1935—Boys	Frederick Abel, Alabama.
	Howard Cobb, New York.
	Charles Jordan, Kansas.
	J. Alton Riffle, Missouri.
Girls	June Castine, South Carolina.
	Eloise Garrett, Alabama.
	Marion McLaughlin, Michigan.
1936—Boys	C. A. Abbott, Jr., Virginia.
	Jerry Cowan, Missouri.
	Roy Graves, Oklahoma.
Girls	Mary Flynn Sellers, Alabama.
	Martha Ekberg, Wisconsin.
	Margaret Topovski, Ohio.
1937—Boys	Junior Clayton, Iowa.
	Albert W. Olson, Kansas.
	Donald R. Wielage, Nebraska.
	Louis W. Sharpe, New York.
	Junior Joyner Marlow, Oklahoma.
	Ned Crawley, Virginia.
Girls	Georgia C. Poynter, Kentucky.
	June Modlin, Nebraska.

LIFE AFTER FORTY

Benjamin Franklin at 81 was the leader in the constitutional convention.

Commodore Vanderbilt, between the ages of 70 and 83, added about \$100,000,000 to his fortune.

Kant at 74 wrote his **Anthropology, Metaphysic of Ethics and Strife of the Faculties**.

Tintoretto at 74 painted the vast "Paradise," a canvas 74 feet by 30 feet.

Verdi at 74 produced his masterpiece, **Othello**; at 80 he wrote **Falstaff**, and at 85, the famous **Ave Maria, Stabat Mater and Te Deum**.

Lamarck at 78 completed his great zoological work, **The Natural History of the Invertebrates**.

Tennyson at 83 wrote **Crossing The Bar**.

Titian at 98 painted his historic picture, "Battle of Lepanto."

Henry Wadsworth Longfellow at 70 wrote **Moriturus Salutamus**, in which he said:

Cato learned Greek at eighty; Sophocles wrote his grand **Oedipus**, and Simonides bore off the prize of verse from his compeers, When each had numbered more than fourscore years,

And Theophrastus, at fourscore and ten, Had but begun his Characters of Men.

Chaucer, at Woodstock with the nightingales,

At sixty wrote the **Canterbury Tales**; Goethe at Weimar, toiling to the last, Completed Faust when eighty years were past.

These are indeed exceptions; but they show How far the gulf-stream of our youth may flow

Into the arctic regions of our lives.

CARE OF THE FEET

Source: National Foot Health council

1. Watch growing feet. Replace shoes with a larger size as soon as needed. Some children's feet, at certain ages, outgrow shoes within four to eight weeks.

2. Teach children to toe straight ahead when walking. Toeing out weakens the ankles and arches and ruins a graceful stride.

3. Discard stockings which are crowding the toes. Pointed toe stockings cause in-grown nails and large joints.

4. Bathe feet daily in warm water with a good grade of soap, brushing the toe nails.

5. Cut the toe nails straight across, not shorter than the flesh at the end of the toes.

6. Never cut corns or callouses unless certain that the cutting instrument has been thoroughly sterilized.

7. Keep the heels of the shoes straight.

Worn over heels cause weak ankles and foot strain.

8. Buy shoes for comfort as well as style. Never permit tight shoes to be worn. Select shoes with flexible leather soles and flexible upper parts. Stiff leathers, and leathers with impervious surfaces retard evaporation of moisture from the feet and make children's feet weak. Kid leather is desirable in children's footwear, it gives and shapes readily, and conforms to growing feet.

9. Have feet examined at regular intervals by a physician, chiropodist or podiatrist specializing in the care and treatment of feet.

10. Do not overtax the feet during physical exercise or during convalescence from an illness.

Exercise by Walking

The average person walks 18,098 steps, or 7½ miles a day according to Dr. Joseph Lelyveld, Rockland, Mass., at the 1936 convention of the National Association of Chiropodists in New York. A school girl averages 11½ miles a day, a boy 15 miles, a farmer plowing 25½ miles, a woman shopper on an ordinary day 8½ miles through stores, a golfer 8½ miles doing 18 holes, a theater

dancer 1 mile an act, a chorous girl 4½ miles a day, a doctor in a hospital 18 miles a day, a letter carrier 22 miles a day, a policeman 14 miles a day, a railroad conductor on a run from Boston to Cleveland 7 miles, a railroad conductor between Chicago and Boston, 5 miles because of fewer stops. A housewife walks more than 3,000 miles in her home a year.

CARE OF THE TEETH

Source: U. S. Public Health service

HOW TO BRUSH THE TEETH

Smearing the nails with clay or vaseline and endeavoring to cleanse them with an old toothbrush will enable one to form an opinion as to the most effective method of brushing the teeth. Brushing across the nails will leave material along the sides of each nail; brushing up and down the nail will leave the area about the root of the nail uncleansed; but if the brush be used in a rotary manner, the bristles describing a small circle upon the nail, it will be found that all the material will be removed. This motion is to be recommended in brushing one's teeth upon the surface next to the lips and cheek.

For the inner or tongue side, the brush is used as one would use a hoe, the rotary motion being impracticable, but in using this

motion the brush should not be pushed back, as this will tend to carry food debris and germs beneath the gum margins, which is the thing most to be avoided. The stroke begins up on the gum and moves in the direction of the main axis of the tooth toward the tip or masticating surface.

For the masticating surface a pulling and pushing motion backward and forward is recommended.

If the gums bleed when the teeth are brushed some abnormal condition exists, and a competent dentist should at once be consulted. A healthy gum is not easily injured.

A thorough rinsing of the mouth should follow to remove such material as has been dislodged by the previous processes.

CLEANING BETWEEN THE TEETH

The use of a toothpick is generally to be condemned, as in its use many persons injure the delicate gum tissue which extends in a crescent-shaped mass between the teeth. The preservation of this tissue is very desirable. Dental floss is very valuable in cleansing the surfaces between the teeth, but care should be taken in its use. It should not be held tight between the fingers and forced through between the teeth. Such

method allows the floss to snap through with much force, much like the action of a bow-string when released. Thus used dental floss will cause injury to the gums. To use floss with benefit draw it carefully through between the teeth with a pulling motion and when it is freely movable draw it carefully back and forth all over the surfaces between the teeth, but do not force it beneath the gum margin.

CARE OF THE TEETH

DECAY

Decay of the teeth, spoken of as "dental caries," is caused by the action of germs (bacteria) which lodge upon the less exposed parts of a tooth. As a result of their growth the tooth structure is softened, allowing the succeeding generations of bacteria to penetrate farther into the tissues of the tooth.

It will be noticed that decay usually begins either in the little grooves upon the surface used in chewing, but which because of their depth are not well scoured by the food in chewing, or else at the point where one tooth adjoins another. This point also fails to receive the scouring which the more

exposed parts of a tooth receives.

In some of the ancient skulls examined it was found that the surfaces which made contact with other teeth in the same jaw were highly polished by the slight individual motion of each tooth in its socket as hard pressure was brought to bear upon it and it was thus rubbed against its neighbor. Therefore, to reduce or prevent decay of the teeth we must work along two lines, (1) to polish all surfaces of the teeth as far as possible, and (2) to reduce the number of bacteria to a minimum.

FREQUENCY OF BRUSHING THE TEETH

The teeth should be carefully brushed after each meal. When this is impracticable, the teeth should at least be brushed on arising in the morning and before retiring at night.

and a thorough rinsing of the mouth and gargling of the throat should be practiced after each meal.

CLEANING THE GUMS

The gums also may be cleansed with the brush, but not with as hard usage as when polishing the teeth. Regular brushing of

the gums when properly performed will not injure them unless they are diseased.

CARE OF THE TEETH

PYORRHEA

An accumulation of tartar where the teeth join the gums is a contributing cause, but not the only cause, of pyorrhea, or Riggs's disease. The gums become irritated and infected by disease-producing germs, the tissues are broken down, and pus forms. Unless the pyorrhea sufferer is prompt in putting his case in the hands of a dentist, the infection continues, rapidly dissolving the soft bone surrounding the teeth, which is called the alveolar process, and destroying the attachment of the soft tissues of the gum to the teeth. In severe cases the teeth become loose and eventually are lost.

There is no dental disease in the treatment of which it is so important for the dentist

to have the hearty cooperation and support of the patient as in the treatment of pyorrhea. No medicine ever has been suggested which will cure pyorrhea, and the sooner this fact is recognized by both dentist and patient the better for all concerned. The only known remedy is the thorough removal of all irritating substances of whatever nature and the polishing of all exposed tooth surface, by the dentist, and the subsequent proper use of tooth brush, powder, or paste to keep the teeth and gums in a healthy condition.

Patients who have a tendency to pyorrhea should return to their dentist for examination three or four times a year.

TOOTH POWDERS, PASTES AND OTHER DENTRIFICES

The use of a tooth powder, tooth paste or other dentifrice is desirable and there is no particular choice in the selection of one except that it should not be gritty; in this case it would be too hard for continuous use.

There are very few, if any, which can be said to be harmful. Ordinary lime water is excellent for cleaning the teeth, for it dissolves the mucous film which often covers the teeth.

CARE OF THE TEETH

REMOVING GREEN STAINS FROM TEETH

Many persons become discouraged because they are unable by such measures as are here recommended to remove the green stain that sometimes appears about the necks of the teeth. This is especially noticed in the mouths of children and requires professional skill to remove. Once the stain has been

carefully removed and the teeth kept well polished, it becomes possible to keep the stain from reappearing. It is purely a vegetable growth and harmless unless allowed to remain too long, in which case the enamel will be found to be softened or "decalcified" beneath it.

TARTAR DEPOSIT

The first sign of tartar is a slight roughness, felt usually on the inside of the lower front teeth. This is caused by deposits from the saliva of a hard chalky substance. If you find that your teeth have tartar deposits, go

immediately to your dentist and have him remove the deposits and give the teeth a thorough cleaning and polishing. The unclean condition of the mouth resulting from tartar deposits is a common cause of "bad breath."

PREREQUISITES TO GOOD EYESIGHT

Source: Hygeia

1. Drops administered at birth of every child.
2. The eyes of all children regularly and periodically examined and tested.
3. Corrective glasses scientifically prescribed and treatments given as needed.
4. Sightsaving classes organized for children with defective vision.
5. Children's sight safeguarded from accidents, especially from fireworks.

6. Campaigns for safety in industry and explicit observance of rules by all workers.
7. Avoidance of marriage or at least of parenthood by persons with transmissible causes of blindness.
8. A blood test before marriage.
9. Blood tests as a routine part of prenatal care with treatment when necessary.
10. The support of every movement aiming to conserve sight as an inalienable right.

MENTAL HYGIENE

In olden times mental illness superstitiously was thought to result from demoniacal possession or from lunar (moon) influence (hence the term lunacy). Incantation, exorcism and punishment were common practices to drive "devils" from a victim's body. Theories relating parts of the body to mental traits also appeared centuries ago as indicated by the adjectives bilious, splenetic, phlegmatic, sanguineous and choleric to describe temperament.

Although much confusion still exists as to terminology and classification of mental diseases, there is virtual agreement among psychiatrists (doctors who have specialized in mental diseases) on a number of basic points: (1) "**Insanity**" is merely a legal term covering so many different kinds of mental illness and so restricted by definition (knowledge of right and wrong) as to be worthless

scientifically (2) feeble-mindedness is not a mental disease but merely weakness of intellect; (3) the Mendelian law of inheritance of specific characteristics does not apply to either feeble-mindedness or mental disease; (4) some mental diseases are physical or **organic** in origin but a large or larger proportion are **functional** or the result of mental complexes without physical counterpart; (5) there is no such thing as a "**nervous breakdown**." A person said to have one has suffered from some mental disease, usually one without organic basis; (6) there are two major types of mental diseases—**neuroses**, in which the patient is "off" on some subjects but aware of the world in general, and **psychoses**, in which he completely loses touch with reality, lives in a dream or mental world of his own, is what might be called "just plain crazy."

FEEBLEMINDEDNESS

Not a mental disease but lack of intellect, feeble-mindedness may be a condition present at birth (**amentia**) or the result of loss of intellect later in life (**dementia**).

Amentia. Most feeble-mindedness is not hereditary, but may result from pre-natal or birth injuries; only about 15 per cent of feeble-minded persons had a feeble-minded parent. The feeble-minded are classified by means of tests, most popular of which is the Stanford-Binet, to establish their intelligence quotient. (I. Q.). The tests are in groups of six for each chronological age from 3 to 18 inclusive to enable the mental age to be determined by months as well as years. The I. Q. is arrived at by dividing the mental age (M. A.) as determined by the test by the chronological age (C. A.) and multiplying by 100. For persons over 16 that age always is used as the C. A. Classification and characteristics of aments follow:

Class	I. Q.	M. A.	Characteristics
Moron	50—69	8—12	Capable of menial labor; needs supervision part of time; not more inclined to crime than normal persons; not sexual pervers; slow to learn but capable of self support; comprise about 80 per cent of all feeble-minded.

Imbecile	25—49	4—8	Need constant supervision but can care for self; can protect self against physical danger but not support self; about 15 per cent of all feeble-minded.
----------	-------	-----	---

Idiot	0—24	1—4	Incapable of any self help; about 5 per cent of all feeble-minded.
-------	------	-----	--

General Intelligence. Although standard intelligence tests have been criticized as measuring learning rather than intellect, they are used extensively. During World War I Army Alpha tests were given to 1,700,000 American soldiers whose mental age averaged 12 years 8 months. The entire population is said to divide itself as follows:

Class A	3 per cent	capable of professional training
Class B	20 per cent	capable of college training (white collared)
Class C	54 per cent	capable of high school training
Class D	20 per cent	high and low grade morons
Class E	3 per cent	hopelessly feeble-minded and lower morons

Class A includes about 3,300,000 potential leaders. **Who's Who in America** contains about 30,000 names comprising about 9 per cent of those in Class A, or 27 persons per 100,000, indicating that Class A rating doesn't necessarily mean success as success may be judged by being selected for mention in **Who's Who**.

Dementia. Loss of intellect in later life always results from some organic brain injury or disease: (a) **trauma**, injury from accident, being knocked unconscious, etc.; (b) **tumor**; (c) **intoxicant**, principally alcohol; (d) **Huntington's chorea**, degeneration of the brain cells; (e) **encephalitis**, sleeping sickness; (f) **senile**, atrophy of brain tissues from old age; (g) **arteriosclerosis**, hardening of the arteries of the brain; (h) **post-thrombotic** and **post-hemorrhagic**, brain lesions, often from syphilis; (i) **luetic**, softening of the brain from syphilis (**pareisis**).

FACT AND FANCY ABOUT FEEBLEMINDEDNESS

Source: National Committee for Mental Hygiene

What Some People Still Believe

1. That feeble-mindedness is a mental disease.
2. That feeble-mindedness can be cured like many mental diseases.
3. That feeble-mindedness is always inherited.
4. That sterilization of the feeble-minded is the best solution of the problem.
5. That the feeble-minded are a menace and should all be kept in institutions.
6. That the feeble-minded are unteachable,

- and a total loss to society.
7. That the feeble-minded are all equally defective.
8. That the feeble-minded are readily recognizable as such.
9. That the feeble-minded have no "feelings" and do not realize their condition.

What Science Teaches

1. That feeble-mindedness is arrested intellectual growth in early years:

2. That true feeble-mindedness is a lack of organic brain development which cannot be cured in a medical sense.
3. That accidental causes, such as some birth injuries, early childhood diseases, or other unknown factors, are responsible for intellectual defect in at least half of the cases.
4. That sterilization is only a partial solution—first, because there are nonhereditary causes; secondly, because we cannot say how much, or when, feeble-mindedness is transmissible in the present state of our knowledge of laws of heredity.
5. That there are good feeble-minded and bad feeble-minded persons. Segregation is necessary only for the low grades of defectives and for the incorrigible ones.
6. That most of them, if taken early, can be trained in special classes in the public

- schools or in state schools for the feeble-minded, to do manual work and to lead happy, useful and social lives.
7. That there is a gradual curve from the extreme condition of the idiot, whose "mental age" is one or two years, to the moron and borderline case, whose "mental age" ranges from eight years to normal.
8. That the diagnosis of feeble-mindedness is difficult and should always be made by a competent psychiatrist and based upon a complete study of the individual, which should include, among other fields of inquiry, standard intelligence tests administered by an expert psychologist.
9. That all but the lower grades of the feeble-minded are often sensitive about their mental handicap and need sympathetic understanding and guidance.

WHAT PSYCHOSES ARE

The victim of a psychosis, major mental disorder, may be a person of high intelligence. In his psychotic condition he is entirely out of touch with reality, misinterpreting what he sees and hears. Organic brain disease causes only about 25 per cent of psychotic cases. Most psychoses are **functional**, that is, purely mental in origin, resulting from conflict and inability to adjust to the normal environment. The alternative to accepting mentally a real situation which is painful is to create a private mental world which is what psychotics do. Major types of psychoses include: (1) **dementia praecox** (now called **schizophrenia**, which means "split personality"), accountable for about 50 per cent of all psychotic patients; (2) **manic depressive**, about 10 per cent; (3) **toxic**; (4) **ideopathic epilepsy** and (5) **paranoia**.

Dementia Praecox. Noticeable at times of great stress early in life, at puberty, about 30 when financial adjustments are important, and about 40 when mental and physical decline begins. The three chief characteristics of a split personality are lack of insight, general indifference and auditory hallucinations. Chief types are: (1) **simplex**—the patient flees from reality into day dreams, his mental horizon contracts, he neglects friends, has few interests except eating and sleeping; (2) **hebephrenic**—begins more suddenly and inclines to auditory hallucinations and compulsions and automatic actions such as stepping on sidewalk cracks, repeating phrases, etc.; (3) **paranoid**—slow deterioration as patient develops delusions of either persecution or grandeur terminating in a vegetative or dream world; (4) **catatonic**—characterized by negativism. If **stuporous** patient refuses to eat, move, care for self and may maintain wax-like flexibility; if **excited** the patient screams, repeats words or phrases, has auditory hallucinations. Good chance of recovery.

Manic-Depressive. Instead of a flight from this is a flight into reality. The patient is alternately extremely elated (manic stage)

and extremely depressed (depressive stage). In the manic stage, which may be followed by a return to a normal condition or immediately by depression after weeks or months, the patient is restless, lacks judgment, is talkative. In the depressed stage he cries, is quiet, possibly immobile, mean and surly and may attempt suicide.

Toxic. Results from overindulgence in alcohol, from mental or gas poisoning, gland disturbances or bacterial disease. May be acute as acute alcoholism, delirium tremens, alcoholic hallucinations, or chronic in which case symptoms may resemble those of other psychoses, the origin, however, being largely organic.

Ideopathic Epilepsy. May be acute or chronic. Afflicted with **petit mal** a patient pauses in his speech, may stare into space or close his eyes as he momentarily loses consciousness, perhaps 40 or 50 times daily. **Grand mal** is characterized by recurrent fits and convulsions. In the **twilight condition** the patient suffers lapse of memory though performing his normal actions. A **fugue** is amnesia during which the patient may go to another town and wake up not knowing how he got there; on the journey he seems normal to others. This is a flight from reality, the patient wishing to escape from some unbearable mental situation. In a state of **furor**, a patient is violent and may commit murder and then fall asleep beside his victim; awakening he has no remembrance of what happened.

Paranoia. True paranoia is rare, but schizophrenic patients may have paranoid tendencies. A true paranoid is a monomaniac, normal on all but one subject. He has a systematic delusion of persecution or grandeur in terms of which he interprets every experience: people conversing are talking about him, etc. The condition may arise entirely out of the patient's own personality problems or may develop after he has actually suffered from persecution and has brooded over his disappointment.

NEUROSES

The psychotic patient loses touch with reality, but the victim of a neurosis is well aware of his environment. He generally is a person of high intellect whose condition is diagnosed as functional after all possible organic causes have been excluded through physical examination. Common types include: (1) **hysteria**; (2) **neurasthenia**; (3) **psychasthenia** and (4) **anxiety**. In all of these

the visible symptoms are physical but the causes are mental rather than organic. All neurotics are **hypochondriacal**—that is, they enjoy their ills, which they themselves create as release from worse mental sufferings.

Hysteria. Originally thought to be a female disease of the womb. Characterized by fits, temper and vomiting, aches and pains,

regions of anesthesia (parts of the body in which victim has no feeling). The hysterical person usually gets his way with others which is the unconscious mental explanation of the condition.

Neurasthenia. The patient complains of his health, is exhausted, unable to sleep, has unlocalized pains which can't help but bring him the human sympathy he craves.

Psychasthenia. The patient is a victim of obsessions or compulsions which he rationally knows are wrong but which he can't overcome, as humming a certain tune, touching every fence post, etc.

Anxiety. Continuous nervous tension wears down the victim as he has a feeling of impending disaster and wishes the worst would happen so as to be over with.

PHOBIAS

Victims of neuroses and persons with psychopathic personalities frequently have phobias, which are specific fears as distinguished from anxiety which represents a vague gen-

eral fear. Phobias are anxiety hysterical phenomena and are disguised unconscious wishes as a result of unpleasant experiences in early life.

PHOBIAS: SCIENTIFIC NAMES TRANSLATED

Acrophobia	Fear of height	Neophobia	Fear of novelty
Agoraphobia	Fear of open spaces	Nyctophobia	Fear of darkness
Ailurophobia	Fear of cats	Ochlophobia	Fear of crowds
Anthropophobia	Fear of people	Ophidiophobia	Fear of snakes
Astraphobia	Fear of lightning	Pharmacophobia	Fear of drugs
Autophobia	Fear of being alone	Phobophobia	Fear of one's own fears
Bacteriophobia	Fear of germs	Photophobia	Fear of lights
Claustrophobia	Fear of enclosed spaces	Pryophobia	Fear of fire
Cynophobia	Fear of dogs	Siderodromophobia	Fear of railways
Doraphobia	Fear of fur animals and objects	Sitophobia	Fear of food
Ergasiophobia	Fear of work	Taphophobia	Fear of being buried alive
Erythrophobia	Fear of blushing	Thanatophobia	Fear of death
Gephyrophobia	Fear of crossing bridges	Toxiphobia	Fear of poisoning
Keraunophobia	Fear of thunder	Triskaidephobia	Fear of being 13th at table
Lyssophobia	Fear of rabies	Zoophobia	Fear of animals
Mysophobia	Fear of dirt

DEFENSE MECHANISMS

Dr. Beverley Randolph Tucker, director of the Tucker sanatorium, Richmond, Va., has reported an extraordinary case of what is known as **regression**. Following the death of her husband when she was nearly 60 a woman who had been pampered as a child first dressed herself as a younger woman, then became an adolescent, later a child, and finally acted like a small baby.

Other "defense mechanisms" against intolerable situations, according to Dr. Tucker, are: (1) **rationalization**, giving false reasons for real ones; (2) **compensation**, the abandonment of an action or endeavor which is too difficult or too uncomfortable so that they may throw their activities in

another line of endeavor; (3) **regression**, the reverting back to younger and more simple periods of life, even unto childhood and occasionally to foetalhood; (4) **reversion** or **displacement**, giving up of one form of energy or urge, usually of sexual origin, to activities that are more socially approved; (5) **projection**, throwing into someone else the individual's own ideas and faults and accusing them or trying to reform them; (6) **sublimation**, shunting undue sexual ideas, actions, or energies, or various deficiencies into other conduction paths which are frequently esthetic, poetic, or so-called uplifting in expression.

WHEN TEETH APPEAR

Source: U. S. Public Health Service

Temporary or "Milk" Teeth

Two lower front teeth, at 5 to 7 months.	Four first molars, one on each side of each jaw, 5 to 7 years.
Two upper front teeth, at 6 to 8 months.	Two lower front teeth, 5 to 7 years.
Two more lower front teeth, at 7 to 9 months.	Two upper front teeth, 6 to 8 years.
Two more upper front teeth, at 8 to 10 months.	Two more upper front teeth and two more lower front teeth, 6 to 8 years.
Four back (molar) teeth, one on each side of each jaw, at 10 to 14 months.	Four bi-cuspsids, two upper and two lower, 8 to 10 years.
Four more molar teeth, back of the others, at about 2 years.	Two "eye" and two "stomach," 9 to 12 years.
Four cuspsids ("eye" and "stomach" teeth) at 2 to 2½ years.	Two upper and two lower second molars, 12 to 14 years.
Permanent Teeth	Two upper and two lower third molars, 17 to 25 years.

PREVENTING SELF DESTRUCTION

"Sane or insane the suicide is always a social failure entitled to the pity and the compassion of the more fortunate members of the community," declares Dr. Frederick L. Hoffman, noted statistician, in his latest annual report on suicides. "Society has failed to discharge its obligation toward this vast army of unfortunates, many of whom are the victims of a confused social and economic order hindering individual security and offering little hope for successful readjustment. The would-be suicide meets with little sympathy on the part of those whose aid and comfort is needed to avoid the impending tragedy. It certainly is disconcerting to realize that during a period of 16 years a quarter of a million men and women, some mere boys and girls, should have found the problems of life impossible of solution and sought relief in self destruction which, nevertheless, leaves heavy burdens upon dependents who must carry on."

Virtually every person who has taken his life could have been persuaded not to, according to Dr. Harry Marsh Warren, founder and president of the National Save-a-Life league, New York City, if he had an opportunity to discuss his intention with some sympathetic person. The league is intended to offer that opportunity and since 1907 believes it has prevented about 40,000 suicides.

To study the history, causes, motives, treatment and prevention of suicide the Committee for the Study of Suicide was incorporated in 1936 in New York. Its prime mover is Dr. Gregory Zillboorg, psychiatrist. The committee at present is sponsoring research in mental hospitals.

The British Anti-Suicide bureau, founded in 1906 in London; the Vienna Advisory Center for Those Weary of Life; the Suicides Aid society of Berlin; the Wait-a-Bit society and the Suicide Prevention clinic of Tokio are among the foreign agencies which attempt to prevent suicides. At Odessa, Rus-

sia, is a museum containing implements taken from would-be suicides.

Study shows that most suicides occur about 11 a.m., that Tuesday is the day of the week on which most suicides take their lives and that June 11 is the most popular day for suicides. The U. S. army reports that suicides among enlisted men and officers increased just before the Spanish-American war, just before the World War and before World War II.

The "patient" at Dr. Warren's clinic usually is given 14 reasons to answer the query, "Why should I not destroy my life if I wish?" These are:

1. Because you would be doing the most sinful thing possible.
2. Because how do you know you won't have to begin life in the next world where you leave it here?
3. Because you would be a murderer.
4. Because you would be like a soldier who deserted his post of duty.
5. Because you would cruelly cause sorrow and humiliation to your family and friends.
6. Because your life in this world is regarded as a sacred trust.
7. Because you should not set such a terrible example before the world.
8. Because you would be considered a coward and quitter.
9. Because many have overcome greater obstacles than you have.
10. Because you might be unsuccessful and become an invalid for life.
11. Because if you overcome this temptation you may be able to help others similarly tempted.
12. Because tomorrow may bring you what you most desire.
13. Because life is short—you may die any day.
14. Because as you seriously look at this question from any viewpoint you or anyone can see how wrong it would be to take such a fearful risk.

PHYSICAL AND NERVOUS SHOCK

Anyone who is injured may suffer from physical or nervous shock.

Here are several signs of shock:

Skin is cold and clammy.

Face is pale and covered with beads of sweat.

Eyes are wide open and staring.

Pulse is weak.

What to do

Examine for bleeding.

Lay patient on his back.

Cover patient and keep him warm.

Keep his head low.

Loosen his clothing.

Rub his arms and legs toward the body.

Don't ask him any questions.

Turn the head to one side if he starts to vomit.

Have him breathe aromatic spirits of ammonia.

Don't move him unless absolutely necessary.

Poor Hearing

In the United States alone, about 14 per cent of the population is hard of hearing in one or both ears, according to estimates.

It is also estimated that from five to eight million of these people are seriously handicapped by their poor hearing.

APPROVED BLUE CROSS PLANS

UNITED STATES

UNITED STATES PUBLIC HEALTH SERVICE

REORGANIZATION

Administrative reorganization of the United States Public Health Service became effective with the issuance of Public Health Service Reorganization Order No. 1, promulgated under authority of Section 1, Public Health Service Act of 1943, Public Law 184, approved November 11, 1943.

The order places functions of the Public Health Service in four administrative units: Office of the Surgeon General, National Institute of Health, Bureau of Medical Services, and Bureau of State Services.

The Surgeon General, assisted by the Deputy Surgeon General, maintains general

supervision over the administration and operations of the Service. In addition, he is responsible for professional supervision over Public Health Service officers detailed for duty with other governmental agencies, and for conducting relations of the Public Health Service with international organizations having public health functions. The 11 district officers of the Public Health Service have immediate responsibility for administration of all Service activities within their several jurisdictions. The district officers in charge are responsible directly to the Surgeon General.

ADMINISTRATION OF PUBLIC HEALTH SERVICE

Surgeon General: Thomas Parran
Deputy Surgeon General: Warren F. Draper*

Office of the Surgeon General: Asst. Surg. Gen. J. K. Hoskins, Sanitary Engineering; Asst. Surg. Gen. W. T. Wright, Jr., Dental Division; Asst. Surg. Gen. Carl Michel, Chief Medical Officer, U. S. Coast Guard; Medical Director W. F. Ossenfort, Commissioned Officers; Nurse Director (R) Lucile Petry, Nurse Education; Mr. George St. J. Perrott, Public Health Methods; Mr. Charles E. Felton, Executive Assistant; Mr. Roy L. Harlow, Budget and Fiscal Officer.

National Institute of Health: Asst. Surg. Gen. Rolla E. Dyer; Medical Director R. R. Spencer, National Cancer Institute; Medical Director Charles A. Armstrong, Infectious Diseases; Medical Director William H. Sebrell, Jr., Physiology; Sr. Surg. Milton V. Veldee, Biologics Control; Prof. Claude S. Hudson, Chemistry; Sr. Surg. Paul A. Neal, Industrial Hygiene Research, Sr. Surg. R. D. Lillie, Pathology; Prof. Willard H. Wright, Zoology.

Bureau of Medical Services: Asst. Surg.

Gen. R. C. Williams; Medical Director William S. Bean,†† Hospital Division; Medical Director Gilbert L. Dunnahoo, Foreign Quarantine; Medical Director Lawrence Kolb,§ Mental Hygiene Division; Sr. Nurse (R) Jessie Macfarlane, Nursing Service.

Bureau of State Services: Asst. Surg. Gen. L. R. Thompson, Asst. Surg. Gen. C. L. Williams; Medical Director J. W. Mountain, States Relations Division; Medical Director J. R. Heller, Venereal Disease Division; Medical Director J. G. Townsend, Industrial Hygiene Division; Medical Director Herman E. Hilleboe,* Tuberculosis Control Division; Sr. Nurse (R) Pearl McIver, Public Health Nursing; Mr. Glen E. Hunter, Administrative Officer.

*Detailed to War Department for duration.

†Tuberculosis Control Division established July 1944.

†† Died Nov. 26, 1944. Medical Director Otis Anderson named to post Dec. 11, 1944.

§Retired Oct. 31, 1944. Succeeded on Nov. 1, 1944 by Dr. Robert H. Felix.

PUBLIC HEALTH NURSES IN UNITED STATES, HAWAII, AND ALASKA, JANUARY 1, 1940-1944¹

	1940	1941	1942	1943	1944
Grand total ²	20,434	20,441	20,767	20,434	20,625

¹ First year data not available for Puerto Rico and Virgin Islands.

² Exclusive of industrial nurses.

³ A considerable number of nurses employed by the American Red Cross are engaged in activities which are not strictly public health nursing.

T. B. Examination

Popular Photography magazine declares that the chests of 1,000 people may be examined for tuberculosis in one day by

one crew of X-ray technicians through use of an electric-eye exposure meter.

NUMBER OF PATIENTS TREATED ANNUALLY BY THE UNITED STATES PUBLIC HEALTH SERVICE, 1868 TO 1944¹

Fiscal Year	Patients	Fiscal Year	Patients
Prior to reorganization:			
1868	11,535	1906	54,263
1869	11,356	1907	55,129
1870	10,560	1908	54,301
After reorganization:			
1871	14,256	1909	53,704
1872	13,156	1910	51,443
1873	13,529	1911	52,209
1874	14,356	1912	51,078

1891	52,992	1929	260,552
1892	53,610	1930	279,350
1893	53,317	1931	259,364
1894	52,803	1932	257,208
1895	52,643	1933	294,101
1896	53,804	1934	304,439
1897	54,477	1935	329,586
1898	52,709	1936	327,245
1899	55,489	1937	350,386
1900	56,355	1938	560,973
1901	58,381	1939	398,133
1902	56,310	1940	415,922
1903	58,573	1941	537,594
1904	58,556	1942	743,109
1905	57,013	1943	1,292,082
		1944	1,002,923

¹ These figures do not include patients treated in connection with veterans' relief activities of the service, as follows: 1918, 192; 1919, 13,856; 1920, 279,036; 1921, 667,832; 1922, 242,379; 1923, 9,704; 1924, 3,414; 1925, 4,360; 1926, 3,749; 1927, 2,830; 1928, 3,448; 1929, 4,907; 1930, 6,817; 1931, 9,278; 1932, 9,667; 1933, 8,377; 1934, 716; 1935, 2,448; 1936, 3,970; 1937, 5,424; 1938, 5,958; 1939, 7,291; 1940, 7,739; 1941, 9,584; 1942, 9,885; 1943, 9,045; 1944, 9,810.

² In this year, and subsequently, the practice of recounting out-patients applying for treatment in more than 1 calendar month was discontinued.

³ This figure not comparable to that for 1943, since it omits an unknown number of patients treated at many Coast Guard shore stations and facilities and on Coast Guard vessels, and includes Coast Guard in-patients treated in naval hospitals during first 6 months only.

WARTIME HEALTH

A report of the Senate subcommittee on War-time Health and Education in January, 1945, revealed that only 2,000,000 of the 14,000,000 men examined for the draft in World War II, were up to standard. Of the remainder, 6,500,000 were acceptable despite of defects; 2,250,000 were remediable 4-Fs (of these, 1,500,000 were made fit for duty); and 3,500,000 were hopelessly unfit. In addition, 1,000,000 have been discharged for defects discovered or developed after induction.

The subcommittee also made the following discoveries:

1. About 40% of United States counties lack fulltime public health service, and about the same proportion have no registered hospitals.
2. Distribution of doctors is uneven (poor communities have only $\frac{1}{4}$ as many as middle class ones.)
3. The United States has only 3,000 psychiatrists, not enough for treatment of

mature mental cases, let alone preventative work among children.

4. High-quality care on a charity or low-cost basis is available to the poor in relatively few places. Even in those places, low-income families are often reluctant to accept charity.

Ancient Hymn

For more than 1,500 years, people have been singing the well-known hymn, "Gloria in Excelsis."

Child Victims

Statistics for 1945 indicate that 110,000 children of school age were injured by motor vehicles in that year. Motor accidents claimed the lives of 2,050 school children in 1944, despite wartime driving restrictions.

GIANTS DIE YOUNG

A compilation made a number of years ago showed that abnormally tall men died young, the average of several outstanding cases being 34 years. Among the cases cited were the following:

	Height		Yrs. At Death
	Ft.	In.	
Peter Tuchan.....	8	7	29
Christopher Munster.....	8	6	45
O'Brien ("Byrne").....	8	4	22
Patrick Cotter.....	8	4	45
Antonius of Syria.....	7	7	25
Bank clerk of England.....	7	6	32
Robert Hale.....	7	6	43

On the other hand the Metropolitan Life Insurance company in 1937 reported that a study of more than 20,000 tall men, 6 feet 2 inches or over, insured by that company, revealed that they had a virtually normal mortality. The study showed that according to weight these men followed the normal pattern; namely the highest death rates, age considered, were among young underweights and older overweightes. Causes of death were the same as for the population as a whole.

Rat Population

Rats, man's natural enemies, cause \$200,-000,000 damage annually in the United States through consumption of foodstuffs alone. Estimates claim that it costs \$2 a year to maintain each rat, and the rat population in most cities outnumbers the civilian population. For this reason, most cities

carry on continuous campaigns to keep rats from multiplying too rapidly. During the first month of a campaign recently inaugurated by the United States Bureau of Biological Survey in a large western city, more than 20,000 rats were killed in the city dumps

New Cases of Pulmonary Tuberculosis Diagnosed Among College Students, 1943-44

Source: Fourteenth Annual Report of the Tuberculosis Committee, American Student Health Association

Institutions with SOME Organized Tuberculosis Program:

No. of cases diagnosed as unstable	156
No. of cases diagnosed as quiescent	151
No. of cases diagnosed as healed	315

Total new cases reported

No. of students who left college because of tuberculosis	622
No. of students returning to college having undergone treatment for tuberculosis	160
No. of institutions reporting	308
Approximate total enrollment	286
New cases per 100,000 students	217.4

Institutions with NO Organized Tuberculosis Program:

No. of cases diagnosed as unstable	4
No. of cases diagnosed as quiescent	3
No. of cases diagnosed as healed	7

Total new cases reported

No. of students who left college because of tuberculosis	14
No. of students returning to college having undergone treatment for tuberculosis	9
No. of institutions reporting	11
Approximate total enrollment	114
New cases per 100,00 students	121,133

Total Cases of Pulmonary Tuberculosis Diagnosed 1943-44:

Student cases newly diagnosed	636
Food-handlers	19
Faculty, administrative officers, employees, etc.	61

Total new cases

716

The Tuberculosis Committee of the American Student Health Association believes there is ample evidence to justify the following statements relative to case-finding procedures commonly employed among college students.

1. The incidence of tuberculosis infection among college students is steadily decreasing. The majority of reports from colleges in 1943-44 indicate infection rates varying between 15 and 30 per cent.

2. The two dose Mantoux method is recommended as the method of choice for tuberculin testing. If a single test dose is employed, an intermediate dose of at least 0.1 mg. O.T., or 0.0001 mg. P.P.D. should be used. The Vollmer patch test cannot be recommended for use in colleges.

3. The Mantoux test is highly dependable

in eliciting sensitivity due to significant tuberculosis infection or disease. It is sound practice, and in the interests of economy, to provide chest roentgenograms for only those students who react to an adequate dose of tuberculin.

4. Complete protection against tuberculosis for college students cannot be attained through a program limited to the student body. Faculty members and employees, including food-handlers, should participate in the tuberculosis control program on the same basis as students.

5. The lesions of pulmonary tuberculosis encountered in college students are, in a majority of instances, unstable and potentially dangerous. The absence of symptoms does not preclude the necessity for early treatment.

TUBERCULOSIS AMONG COLLEGE STUDENTS

A significant increase in the number of students found to have tuberculosis in 1943-44 as compared with the previous year is reported by the Tuberculosis Committee of the American Student Health Association in its fourteenth annual report.

The enrollment at 286 colleges conducting case-finding programs in 1942-43 was 406,626. They reported 522 newly discovered cases of tuberculosis, a rate of 128.3 cases

per 100,000 enrolled students. During the school year 1943-44, student enrollment at those institutions having survey programs was 286,018. Yet 622 new cases of tuberculosis were diagnosed, a rate of 217.4 per 100,000. This represents an increase of 16 per cent in the number of new cases of tuberculosis found in a student population which has 29 per cent below that of the previous year.

Results of Tuberculin Tests in College Students, 1943-44

NATIONAL TUBERCULOSIS ASSOCIATION

The National Tuberculosis Association was founded in Atlantic City, New Jersey in 1904 by a group of prominent physicians from the United States and Canada headed by the late Sir William Osler.

The purpose of the Association is to educate the public in combating tuberculosis by stressing that tuberculosis is infectious, preventable and curable, if found in the earliest stages.

In 1910 the American Red Cross and the National Tuberculosis Association joined forces. Annual sales of Christmas seals were conducted for the next ten-year period by the Red Cross and funds were turned over to

the National Association. During that ten years the penny Christmas seals bore the emblem of the Red Cross.

In 1920 the National Tuberculosis Association became the sole sponsor of the sales. Since then the Christmas seals have carried the double-barred cross.

Every state in the union now has its own tuberculosis association as well as many local and affiliated agencies. Services made possible through annual Christmas seal sales include free clinics, nursing service, prevention, tuberculin testing, X-rays, rehabilitation, medical and social research.

FACT AND FANCY ABOUT "INSANITY"

Source: National Committee for Mental Hygiene

There Is No Truth in the Belief:

1. That "insanity" is either a disgrace or a mysterious affliction that cannot be prevented or cured.
2. That "insanity" is a single disease of only the most serious kind.
3. That "insanity" comes suddenly and without warning.
4. That people are helpless to prevent "insanity."
5. That emotional shock, loss of dear ones, disappointment in love, loss of money, or other misfortunes, cause "insanity."
6. That "insane asylums" are dreadful places, and that to go to one means never to come out.
7. That "insanity" is inherited.

The Facts Are:

1. That "insanity" includes a group of the more severe types of mental disease. They need early medical treatment just as heart disease and no one need be ashamed of this sickness.

2. That there are many different kinds of mental disease; some mild, some serious. The symptoms also are different.
3. That mental disease develops gradually and displays warning signs in advance.
4. That danger signals (symptoms) of an approaching breakdown usually can be recognized and if these are given medical attention the threatened mental disease often can be prevented.
5. That shocks or losses may precipitate a mental disorder, but in such cases the real possibilities of the illness have been present for some time but unrecognized.
6. That our "asylums" now are hospitals from which 25 to 50 per cent of all patients are discharged as recovered or improved.
7. That some kinds of mental disease probably have an inherited background, but a greater number seem to arise from inability to adjust to a different environment.

NATION'S WHISKEY SUPPLY AT END OF WAR

Fifty-four per cent of the whiskey supply controlled by the Allied Liquor Industries in 1942, when its facilities were converted to full time war alcohol production, had been consumed by June 30, 1945. The end of the war thus averted a severe whiskey shortage in the United States, since estimates showed that the 194,013,000 gallons of aged liquor on hand at the end of June,

1945, would last little more than two years if released at the 1942 peak consumption rate.

In September, 1942, according to ALI figures, there were 420,121,000 gallons of whiskey in storage. In August, 1944 and January, 1945, distillers were given grain to produce 41,562,303 gallons more, but this will not be properly aged until 1948.

Source: Calculated from U. S. Census Bureau data by the National Safety Council, except for 1944 figures which are Council estimates based on state reports. All figures have been adjusted to the classification given in the Fourth Revision of the International List of Causes of Death, and are thus comparable throughout the period covered. See note in table on opposite page. The table shows the eight types of accidental deaths which have occurred most frequently in recent years. Occasionally there is a large number of excessive heat fatalities (in 1936 there were 4,678), but usually these deaths number fewer than 1,000 per year.

*Deaths from collisions of railroad trains and motor vehicles are included under both headings in order that each one may appear in proper perspective. The table on the opposite page shows the number of railroad deaths excluding railroad-motor vehicle accidents.

**Including conflagrations.

TYPES AND LOCATIONS OF HOME ACCIDENTS*

1943 to 1944	-4%	+2%	-9%	-4%	-3%	-8%

Total deaths and motor vehicle deaths 1900 to 1928 are calculated from U. S. Census Bureau data; 1933 to 1943 are Census Bureau totals; 1944 figures are National Safety Council estimate. Other figures are National Safety Council approximations (rounded) based on data from the Census Bureau state and city health departments, and other sources.

*Duplications between motor vehicle, occupational, and military personnel are eliminated in the TOTAL column.

**Approximations for these types of accidental deaths cannot be made for these years.

†From 1900 to 1918 legal executions and those deaths from wounds of war which occurred in the United States are included.

‡These estimates are for civilians only. The figures for earlier years include the non-motor vehicle deaths of military personnel, but there were so few such deaths that comparability is not affected.

Source: Individual company reports to the National Safety Council.

*Includes miscellaneous industries and corrected for certain duplications.

**Frequency rate is the number of disabling injuries per 1,000,000 man-hours of exposure. Severity rate is the number of days lost per 1,000 man-hours of exposure, including charges for permanent disabilities and deaths.

†Includes all disabling injuries on shipboard, or off ships while on duty, but includes man-hours on the basis of an 8-hour day only.

††National data from Interstate Commerce Commission, including all accidents with disability beyond the day of injury. Information not available for computing severity rate covering all employees, so steam railroads are not included in the All-Industry average rates.

Source: U. S. Census Bureau for total deaths and deaths from collisions with railroad trains and electric cars, through 1943; National Safety Council for all other death figures; U. S. Public Roads Administration and state traffic authorities for motor vehicle registrations, and for gasoline consumption used for estimating vehicle mileage.

*The totals do not quite equal the sum of the various types because the estimates were generally made only to the nearest 10 deaths, and to the nearest 50 deaths for certain types.

**Insufficient data for approximations.

††Data on vehicle-mileage prior to 1925 inadequate for computing rates.

‡All years calculated on the present standard ratio of 35 injuries per death, since data are not available to determine whether this ratio has changed. Per cent changes are the same as for all deaths.

Longevity Among Animals

The Illinois Humane society calls "difficult to answer" a question regarding the life span of commonly known animals. "However," it reports, "the natural life of horses is from 18 to 20 years; the natural life of cows 14 to 15 years; the natural life of lions 20 years, but lions in captivity live longer; the natural life of elephants is 60 years; the natural life of leopards is from 10 to 15 years and more than that in the cases of leopards in captivity. It

is a known fact that animals in captivity live longer than in the wild state.

As regards dogs, the question becomes more complicated, depending upon the breed and type of dog. Some breeds live longer than others; also there seems to be considerable dispute regarding the natural span of all these animals. Life is just as uncertain in the animal world, perhaps more so, than it is in the human world."

BIRTHS GAIN IN SEVEN STATES

Although 140,060 fewer births were registered in the United States in 1944 than in 1943, seven States reported an increase in births, according to the Bureau of the Census Department of Commerce. In 1944, registered births totaled 2,794,800.

Florida had 3,514 more births, an increase of 7.3 percent, than in 1944. Six other States, all in the West or Southwest, that gained in births are Nevada, 142 or 4.5 percent; New

Mexico, 600 or 3.8 percent; California, 4,737 or 2.7 percent; North Dakota, 358 or 2.8 percent; Texas, 1,092 or 0.7 percent, and Washington, 94 or 0.2 percent.

Largest decrease in births registered in 1944 were in the East: Connecticut, 4,692 or 12.3 percent; Pennsylvania, 21,696 or 10.9 percent, and New Hampshire, 1,010 or 10.3 percent.

FIRST AID

MATERIALS FOR THE HOME MEDICINE CHEST

Source: Growing Superior Children, by I. Newton Kugelmass

Material	Purpose	Use
Alcohol, 70 per cent.....	Reduce fever.....	Sponge skin
	Cleanse wounds.....	Apply diluted one-half
	Refresh body.....	Massage
Antiseptics:	Disinfect wounds.....	Apply with sterile cotton
Tincture of iodine, 4 per cent		
Mercurochrome, 2 per cent		
Benzoin tincture.....	Relieve croup, cough, hoarseness.....	Steam inhalation (1 teaspoonful to a quart of water)
Bicarbonate of soda.....	Allay itching.....	Sponge, bath, compresses
	Cleanse mucous membranes.....	Irrigation, enema (1 teaspoonful to a glass of water)
Boric acid.....	Cleanse eyes.....	Irrigation, compresses (1 teaspoonful to a glass of water)
	Cleanse wounds.....	Dust with powder
	Allay itching.....	Irrigation
Hydrogen peroxide, 2 per cent.....	Cleanse wounds.....	Cleanse membranes with soaked cotton pledgets
	Remove mucous.....	
Ipecac syrup.....	Induce vomiting.....	One teaspoonful followed by warm water
Laxatives:	Effect elimination.....	One-half teaspoonful for infants; 1 teaspoonful for children
Aromatic cascara		
Milk of Magnesia		
Mineral Oil.....	Cleanse skin, scalp.....	Sponge
	Soften stools.....	By mouth or enema
Mustard powder.....	Emetic.....	One teaspoonful to a glass of warm water
	Counter-irritant.....	Paste, poultice, bath
Sodium perborate.....	Mouth hygiene.....	Moisten with peroxide and massage gums
Sterile dressings: gauze cotton bandage, adhesive.....	Protect wounds	
Thermometer.....	Measure body temperature	Rectal

HOW TO GIVE FIRST AID IN EMERGENCIES

Source: National Safety council

HEAT EXHAUSTION

How to tell it

- Skin cold and clammy.
- Face pale.
- Dull headache.
- Person may vomit.

What to do

- Call a doctor.
- Keep warm with blankets.
- Give hot coffee or aromatic spirits of ammonia in water.
- Lie flat on back with head low.
- Loosen clothing.

How to tell it

- Skin hot and dry.
- Face red.
- Shooting headache.
- Delirious.

What to do

- Get him cool.
- Dash cold water on face and chest.

SUNSTROKE

- Use water hose on chest if hose is available.
- Put ice on head.
- Have patient drink lots of cold water—not ice water.
- Place in semi-sitting position.
- Strip to his underclothes.
- Heat exhaustion is always more dangerous than sunstroke.

Persons may faint from—

- The sight of blood.
- Fright.
- Fatigue.
- Over-exertion.

What to do

- If you feel faint, lie down before you fall down.
- If some other person seems faint, put your hand on the pit of his stomach and the other hand at the back of his neck, then bend him forward and hold him that way for a short time. This usually revives him.

FAINTING

If someone has fainted—

- Lay him on his back.
- Keep his head low.
- Keep him warm.
- Sprinkle cool water on his face.
- Have him breathe the aromatic spirits of ammonia.
- Later have him drink one-half teaspoonful of aromatic spirits of ammonia in a little water.
- Have him sip cold water.

SPRAINS

Many persons suffer from sprains that may not be particularly serious, but they are usually painful and take a long time to heal. Sprains occur at joints only—usually at the ankles.

What to do

- Place the patient on his back and gently remove the shoe. Keep ice-cold packs on the injury until the doctor gives advice to change the treatment.

POISONS

If anyone has swallowed a poison, his life may depend upon two things; first, on knowing exactly what to do; and second, on doing it at once. Before deciding what to do, it is necessary to know what kind of poison has been swallowed.

There are three kinds of substances that may cause poisoning:

1. Acids such as hydrochloric, carboric, sulphuric and nitric.
 2. Caustics such as lye, caustic soda, and chloride of lime.
 3. Non-corrosive poisons such as benzol, lead, arsenic and methanol (wood alcohol).
- The first two kinds of poisons are corrosives that attack the delicate lining of the mouth, throat and stomach. The third type of poison is absorbed into the system and attacks the heart, or blood, or nerves, or some other part of the body.

What to do

If a person has swallowed an acid, have him drink a quart or more of soapy water, or lime water, or water with baking soda in it. When he can't drink any more, have him hold the solution in his mouth and then spit it out. Continue this treatment until the doctor arrives.

If he has swallowed a caustic poison, have him drink a quart or more of soapy water. Then let him hold lemon juice, or olive oil or castor oil, or melted butter or lard in his mouth.

If he has swallowed a non-corrosive poison, try to get him to vomit; put a heaping teaspoonful of salt in about a pint of lukewarm water and get him to drink it. Or have him drink milk or black tea.

ARTIFICIAL RESPIRATION

This method has been used to save the lives of thousands of persons whose breathing has been stopped by—

- Drowning
- Electric shock
- Inhalation of Carbon Monoxide gas, or Injury

What to do

1. Lay the patient on his belly, one arm extended directly overhead, the other arm bent at elbow and with the face turned outward and resting on hand or forearm so that the nose and mouth are free for breathing.
2. Kneel straddling the patient's thighs with your knees placed just below the patient's hip bones. Place the palms of the hands on the small of the back with fingers resting on the ribs, the little finger just touching the lowest rib, with the thumb and fingers in a natural position, and the tips of the fingers just out of sight.
3. With arms held straight, swing forward slowly so that the weight of your body is gradually brought to bear upon the patient. The shoulder should be directly over the heel of the hand at the end of the forward swing. Do not bend your elbows. This operation should take about two seconds.
4. Now immediately swing backward to remove the pressure completely.
5. After two seconds, swing forward again. Thus repeat deliberately 12 to 15 times a minute the double movement of compression and releases, a complete respiration in four or five seconds.
6. Continue artificial respiration without interruption until natural breathing is restored, if necessary, four hours or longer, or until a physician declares the patient is dead, or until definite rigor mortis (stiffening of the body) sets in.
7. As soon as this artificial respiration has been started and while it is being continued, an assistant should loosen any tight clothing about the patient's neck, chest or waist. Keep the patient warm.

Do not give any liquids whatever by mouth until the patient is fully conscious.

8. To avoid strain on the heart when the patient revives, he should be kept lying down and not allowed to stand or sit up. If the doctor has not arrived by the time the patient has revived, he should be given some stimulant, such as one teaspoonful of aromatic spirits of ammonia in a small glass of water or a hot drink of coffee or tea. The patient should be kept warm.
9. Resuscitation should be carried on at the nearest possible point to where the patient received his injuries. This means removing the patient from the dangerous position by breaking the contact with live electrical equipment (if a case of electric shock) or from the gaseous atmosphere (if asphyxiation). In breaking contacts with live electrical equipment protect yourself by shutting off power or in removing victim use a dry piece of wood or other non-conductor. He should not be moved from the point of resuscitation until he is breathing normally of his own volition and then moved only in a lying position. Should it be necessary, due to extreme weather conditions or some emergency, to move the patient before he is breathing normally, resuscitation should be carried on during the time he is being moved, if practicable.
10. A brief return of natural respiration is not a certain indication for stopping the resuscitation. Not infrequently the patient, after a temporary recovery of respiration, stops breathing again. The patient must be watched and if natural breathing stops, artificial respiration should be resumed at once.
11. In carrying out resuscitation it may be necessary to change the operator. This change must be made without losing the rhythm of respiration. By this procedure confusion will be avoided, and a regular rhythm maintained.

BRUISES

Most injuries cause bruises that sometimes swell up and soon become "black and blue". The discoloration is usually due to the breaking of a few tiny blood vessels beneath the skin.

What to do

The first thing to do for a bruise is to use

cold applications; this helps to keep down both the swelling and the discoloration.

Later, hot applications will improve the circulation and help nature to repair the damage that has been done.

BURNS

Most burns require the services of a doctor, but there are several things that anyone trained in first-aid can do immediately to relieve pain and shock and to prevent further damage to the body tissues of the burned victim.

In general, burns may be caused in one of four ways; by—

Chemicals such as acids and caustics

Hot liquids or solids

Fire

Friction

What to do

If burned with a chemical such as an acid or a caustic, wash gently with water

immediately. And use plenty of water. If possible, use running water from a faucet, hose or shower. Continue to apply water until the pain diminishes or until the doctor arrives.

For all other types of burns the first thing to do is to keep air away from the burned area—and the best thing to use is ordinary baking soda. Simply dust it on the burn through a thin clean cloth. Don't apply water. Certain salves and ointment may be used in an emergency, but usually oily or greasy substances interfere with later treatment that may be suggested by the doctor.

WOUNDS

"Any break in the skin is a wound. Most wounds heal quickly if they are cared for properly. But wounds can become extremely serious if infection develops or if the injured person loses too much blood.

The best thing, of course, is to have every wound cared for by a doctor, but if a doctor is not immediately available, some qualified person should render first aid at once.

FIRST—Stop the bleeding.

SECOND—Apply an antiseptic such as iodine or mercurochrome.

THIRD—Apply a sterile bandage or pad. Most infections result from the neglect of simple injuries such as cuts or scratches on the fingers or hands. Serious injuries seldom become infected because they usually get immediate attention.

Here are a few first-aid principles that everyone should know:

If iodine is used, apply a 3 per cent solution sparingly; let it dry before bandaging; usually only one application a day is necessary.

If mercurochrome is used, apply a 2 per cent or 5 per cent solution.

Dressings should be changed when soiled, loose, wet or uncomfortable.

If swelling or pain develops, see your doctor at once.

In some cases wounds must be cleaned or splinters removed; but such treatment should be left to a doctor or nurse.

Keep dirt, fingers and other unsterile substances away from wounds.

Do not use adhesive tape on a wound; to do so may cause festering. Use adhesive only to keep bandages in place.

Remember—get immediate first aid for all wounds, no matter how slight they may seem to be.

BLEEDING

It's a good thing that most wounds bleed, for the flow of blood helps to keep out germs, and that helps to prevent infection.

But bleeding should be stopped as soon as possible—and it should be remembered that no wound should be covered until the bleeding has been stopped. Otherwise, if a bandage is placed over a bleeding wound the injured person may bleed to death before anyone realizes how seriously he has been injured.

There are several ways to stop bleeding.

Bleeding from a vein. If a vein has been cut, dark blood will flow from the wound in a steady stream. Usually a pad held firmly in position directly over the wound will stop the bleeding. This general rule applies to cases of bleeding from all veins except veins of the neck. If a vein in the neck has been cut, press the thumb above the wound close to the windpipe and toward the backbone.

Bleeding from an artery. If an artery has been cut, bright red blood will come from the wound in spurts. Bleeding from an artery can be stopped either by pressing with the hand or finger at the proper point, or by using a tourniquet.

Pressure Points to Control Bleeding from Arteries.

If blood spurts from a neck or head wound, press the fingers below the wound close to the windpipe toward the backbone.

If bleeding from the shoulder, press the thumb deeply into the V-shaped hollow just above and behind the center of the collar bone.

If bleeding is from the arm or hand, press against the bone at about the middle of the upper arm and under the big arm muscle.

If bleeding is from the leg or foot, press against the bone of the thigh between the legs, about 3 inches below the inner margin of the hip bone.

If an artery has been cut in an arm or leg, it may be better to use a tourniquet rather than hand or finger pressure to stop the flow of blood. But it may take several minutes to prepare a tourniquet, so pressure should be applied until the tourniquet is ready.

A tourniquet may be made of almost any piece of cloth, such as a tie, sock or shirt. Just remember never to use wire, twine or any other article that may cut the skin.

Place a pad on the pressure point, then place the tourniquet over the pad. Tie the ends of the tourniquet to a stick and twist the stick, not too tightly, but just tightly enough to stop the bleeding. Then fasten the tourniquet in that position.

If bleeding is from an artery below the elbow or below the knee, it may be best to bend the limb back on itself and tie it in that position. A hard mat such as a rolled-up cap or newspaper should be placed in the joint.

It is extremely important to release the tourniquet for a few seconds every 15 minutes; if possible, lift the limb and stroke it gently toward the body. This will prevent strangulation.

BROKEN BONES

Setting a broken bone so that it will grow together and be "as good as new" calls for expert medical attention. Whenever any one has broken a bone, the doctor should be called. If he can't come, it may be necessary to take the patient to the doctor—BUT—he should not be moved until someone has applied a suitable splint or bandage. Otherwise, the pain is almost sure to be increased, and the raw edges of the broken bone may pierce or mangle the flesh, nerves, and other tissues, thus making a bad matter just that much worse.

What to do

- If a bone has been fractured in the arm, wrap some newspapers around it, then tie the paper in position with strips of cloth above and below the break, and support the arm in a sling.
- If the collar-bone has been broken, support the arm in a sling and fasten the sling securely to the body.
- If a leg-bone has been broken, try to get two boards, each about $3\frac{1}{2}$ inches wide. Put one board on the outside of the leg and the other on the inside. If the break is below the knee, both boards should extend above the knee. If the break is above the knee, the outside board

should extend up to the armpit, and the inside board up to the crotch between the legs. Place padding between the leg and the boards, then fasten the boards in position with pieces of cloth.

If a kneecap has been broken, place a board under the leg from foot to hip then use pieces of cloth to secure the board in position.

If the head has been injured, and if the person is unconscious, place him flat on his back with the head slightly raised. Loosen his clothing and cover him to keep him warm. If blood is flowing from an open wound in the head, stop the bleeding. If blood oozes from the mouth, ear, nose or eyes, turn the head so the bleeding side is down—and get a doctor quickly!

If breathing is difficult or painful, it is likely that the patient has one or more broken ribs that may have punctured the lungs or other internal organs. In such a case, it is best not to move him unless absolutely necessary.

A compound fracture is one in which a broken bone breaks through the skin. If the wound is bleeding, stop the flow of blood and then cover with a sterile dressing. Do not move the patient. He needs expert medical attention.

HOW TO SAVE DROWNING PERSONS

Source: U. S. Coast Guard

1. When you approach a person drowning in the water, assure him with a loud and firm voice that he is safe.
2. Before jumping in to save him, divest yourself as far and as quickly as possible of all clothes, tearing them off if necessary. If there are any objects lying about that can be thrown to the person in the water, such as a life buoy, wooden box, or other buoyant object that will help to keep the person afloat, throw it to him before jumping in to his relief.
3. On swimming to a person in the sea, if he is struggling do not seize him then, but keep off for a few seconds till he gets quiet, for it is sheer madness to take hold of a man when he is struggling in the water, and if you do you run a great risk. In making a rescue, always endeavor to approach the person in the water from behind. It is important to retain your presence of mind and a clear, cool head and to keep at a safe distance until the person is nearly exhausted.
4. Then get close to him and take fast hold of the hair of his head, turn him as quickly as possible onto his back, give him a sudden pull, which will cause him to float, then throw yourself on your back also and swim for the shore, both hands having hold of his hair, you on your back and he also on his, and of course his back to your stomach. In this way you will get sooner and safer ashore than by any other means, and you can easily thus swim with two or three persons; the writer has even, as an experiment, done it with four, and gone with them 40 or 50 yards in the sea. One great advantage of this method is that it enables you to keep your head up and also to hold the person's head up you are trying to save. It is of primary importance that you take fast hold of the hair and throw both the person and yourself on your backs. After many experiments, it is usually found

preferable to all other methods. You can in this manner float nearly as long as you please, or until a boat or other help can be obtained.

5. It is believed there is no such thing as a death grasp; at least it is very unusual to witness it. As soon as a drowning man begins to get feeble and lose his recollection, he gradually slackens his hold until he quits it altogether. No apprehension need, therefore, be felt on that account when attempting to rescue a drowning person.
6. After a person has sunk to the bottom if the water be smooth, the exact position where the body lies may be known by the air bubbles, which will occasionally rise to the surface, allowance being of course made for the motion of the water, if in a tideway or stream, which will have carried the bubbles out of a perpendicular course in rising to the surface. Oftentimes a body may be regained from the bottom, before too late for recovery by diving for it in the direction indicated by these bubbles.
7. On rescuing a person by diving to the bottom, the hair of the head should be seized by one hand only, and the other used in conjunction with the feet in raising yourself and the drowning person to the surface.
8. If in the sea, it may sometimes be a great error to try to get to land. If there be a strong "outsetting" tide, and you are swimming either by yourself or having hold of a person who cannot swim, then get on your back and float till help comes. Many a man exhausts himself by stemming the billows for the shore on a back-going tide, and sinks in the effort, when, if he had floated, a boat or other aid might have been obtained.
9. These instructions apply alike to all circumstances, whether as regards rough sea or smooth water.

EDUCATION

Elementary and High Schools

THE WAR AND THE PUBLIC SCHOOLS

According to information received annually since 1941 by the U. S. Office of Education from public schools throughout the country, enrollment changes during the war period varied greatly in cities of different sizes and in urban and rural areas. Largest loss was in number of boys in high school in cities of 100,000 population and more—(2.58 per cent); largest gain was in number of girls in elementary schools in cities of 2,500 to 9,999 population (2.07 per cent). There were also appreciable losses in county school systems.

Enrollment in summer schools showed a total of 48,087 for 1944 in elementary schools in 142 school systems, a gain of 10.1 per cent over the 1943 figure. On the high school level, in 220 systems, enrollment for summer sessions totalled 111,731 as compared with 95,459 in 1943, a gain of 17 per cent. More

boys than girls were enrolled in elementary schools while in high school enrollment of girls exceeded that of boys. Increases of 1944 over 1943 were noted in all schools except those of county systems, where a loss of five to six per cent was noted for 1944 over 1943.

Enrollments in preflight aeronautics decreased by almost one-fourth, about one-third fewer girls and one-fifth fewer boys. Enrollments in chemistry and mathematics increased but those in physics decreased, as did enrollments in first and second-year shorthand in 1944 as compared with 1943. Only a little more than half as many school systems reported enrollments in health instruction as in physical education and many systems reported the same enrollments for both subjects, or stated that health education was integrated with physical education.

NATIONAL SPELLING BEE

The National Spelling Bee was founded in 1925 by the Louisville **Courier-Journal**, and was held annually until the beginning of the war, when it was discontinued on the state and national basis because of travel

and other wartime restrictions. The spelling bees have been continued, however, on a county basis, with prizes awarded county winners.

DEATHS INCREASE IN FOUR STATES

More deaths occurred in California, Florida, Montana and Wyoming in 1944 than in 1943, despite the fact that throughout the United States deaths declined by 48,206, to 411,338, in 1944, according to the Bureau of the Census, Department of Commerce.

In California 1,936 more deaths, an increase of 2.2 percent, occurred in 1944. California deaths in 1944 numbered 91,428. Florida deaths increased by 194 or 0.8 percent; Wyoming deaths increased by 27 or 1.2 percent, and Montana deaths increased by

eight or 0.1 percent.

Largest decreases in deaths were in the District of Columbia, 763 or 8.0 percent; Arkansas, 1,095 or 7.2 percent; Vermont, 310 or 6.9 percent; Oklahoma, 1,244 or 6.3 percent, and Rhode Island, 546 or 6.1 percent.

These and other changes in the number of deaths occurring in any State, as shown in the attached table, are not indicative of mortality risk changes, because of extensive migration in recent years.

FEDERAL FUNDS AUTHORIZED OR EXPENDED FOR EDUCATIONAL PURPOSES, 1941-42

Nonemergency funds:

U. S. Office of Education, Federal Security Agency:

Administration, research, and service by the office in Washington, D. C.¹ \$1,006,416
Total apportionment to the States and territories for vocational education and rehabilitation 55,711,247

Land-grant colleges 30,913,125

Instruction in agriculture and mechanic arts² 5,030,000
Agricultural extension service³ 18,956,918
Agricultural experiment stations⁴ 6,926,207

Vocational education at secondary level² ⁵ 21,768,122

Training of teachers 2,168,756
Agricultural education 7,125,653
Trade and industrial education⁶ 7,170,888
Home economics education 4,048,825
Distributive occupations 1,254,000

Vocational rehabilitation² 3,030,000

Federal schools for Indians and natives of Alaska⁷ 10,274,440

Federal oil and mineral royalties⁸ 2,562,985

National forest funds⁹ 1,670,044

National grazing funds¹⁰ 449,290

United States Military Academy¹¹ 3,578,198

United States Naval Academy¹¹ 2,493,661

State marine schools¹² 190,000

Public schools in Panama Canal Zone 1,796,559

Howard University 760,756

National Training School for Boys 344,320

Columbia Institution for the Deaf 142,360

Public schools of the District of Columbia 1,463,453

Emergency funds:

U. S. Office of Education, Federal Security Agency:

Administration of defense training ¹³ 1,357,962

College and high-school student aid (National Youth Administration) 16,180,392

Education program (Work Projects Administration) 18,785,939

School building (Work Projects Administration) 25,846,520

Vocational defense training (secondary schools) 99,704,230

Defense training (college grade) 15,878,189

Assistance for war-affected localities (construction and maintenance and operation) 54,294,57

Education of Civilian Conservation Corps enrollees 1,803,000

¹ Funds available for regular activities; does not include administration of defense training.

² Administered by U. S. Office of Education.

³ Administered by U. S. Department of Agriculture.

⁴ Administered by U. S. Department of Agriculture. Includes cost of administration, research, and service of the staff in Washington, D. C., and of the printing of official experiment station documents.

⁵ The amount indicated is the maximum amount authorized for apportionment to the several States and Territories.

⁶ A certain part of this sum may be used for home economics education.

⁷ Expenditures compiled by Office of Indian Affairs.

⁸ This amount represents 37.5 percent of receipts from the Mineral Leasing Act, which is paid to the various States receiving such funds for roads or schools.

⁹ Twenty-five percent of the current national forest receipts, chiefly from timber and grazing rights, is paid to the States for public roads and schools of the counties in which the forests are situated.

¹⁰ Taylor Grazing Act of June 28, 1934.

¹¹ The pay of cadets at the Military Academy is included, but the pay of midshipmen at the Naval Academy is not included.

¹² To reimburse the States of California, Massachusetts, New York, and Pennsylvania for expenses incurred in maintenance and support of their marine schools, \$25,000 each; in addition, the use of \$90,000 was authorized for the maintenance and repair of ships loaned to the schools by the U. S. Navy.

¹³ Includes \$150,962 of transferred funds.

SIMPLIFIED SPELLING

Source: William Russell, M.S.
The trend toward simplification of spelling in the United States has resulted in the following general rules:

- (1) Substitute **e** for **ae** or **oe**. Examples: encyclopedia, ameba, esthetic, manuever.
- (2) Avoid the use of **gh**. Examples: nite, altho, enuf, furlo, thru.
- (3) Drop **ue** from words ending in **gue**. Examples: catalog, dialog, pedagog, prolog.
- (4) Change final **ise** to **ize** when so pronounced. Examples: surprize, advize.
- (5) Change **ph** to **f** when so pronounced. Examples: fantasy, fantom, fonetic, sulfur, telephone.
- (6) Omit silent letters.

The following is a list of representative reform words which follow these rules and which are in common use throughout America today: altho, ameba, ax, catalog, cigarret, controller, donut, draft, gipsy, hiccup, inclose, indorse, kwiz, mold, nabor (hood), nite, Porto Rico, plow, sirup, sulfur, tencich, theater, tho, thoro (ly) (fare), thru (out).

Four systems of simplified spelling have been developed, called the **New Spelling**, the **American Simplified**, **Systematized Spelling**, and **Fonetik Orthograph**. All four are intrinfabetic in that they employ only 26 letters of the standard alphabet. There are in existence, however, other groups which advocate use of new letters, either personally invented, taken from the

INFLATED PRICES IN PARIS IN 1945

Americans in Paris in 1945 found prices inflated to the point where \$300 a month plus ration cards was a minimum essential. Causes of the inflation were cited as the official exchange rate, and food, clothing, and living accommodation shortages.

Overseas correspondents sought through the Army and State departments to establish an American embassy commissary where basic foods could be purchased.

Basic food costs in legal and black markets showed great differences. Three and a half ounces of butter cost \$2.50 on the legal market, and \$13 on the black market. A pound of sugar cost \$164, or 557 times as much on the black market as it did at the legal price of 28 cents. A pound of flour ordinarily costing 19.6 cents was priced at 70 cents by illegal sellers.

Living accommodations ranged from a pre-war monthly rental rate of \$25 to several hundred dollars. Hotel accommodations and food were estimated to cost \$1,000 a month.

Increased and new taxes on gas, electricity and telephone put costs on such utilities up 200 per cent. Ninety dollars a month was the average total household bill for the three.

SUMMARY DATA FOR INSTITUTIONS OF HIGHER EDUCATION 1939-40 AND 1941-42—Continued

Item	1939-40	1941-42
Receipts:		
Number reporting receipts	1,609	1,628
Receipts specifically designated for additions to:		
Physical plant	\$66,208,774	\$30,096,440
Endowment funds	38,688,220	32,818,316
Annuity funds	2,305,870	1,670,196
Student loan funds	1,043,057	1,792,067
Other nonexpendable funds	2,480,537	2,229,872
Educational and general ⁴	571,288,116	626,295,821
Student fees	200,896,617	201,364,783
Endowment earnings	71,304,241	74,074,813
Federal Government	38,859,955	58,231,545
State governments	151,222,535	166,531,881
County, city, and district governments	24,392,256	27,057,483
Private gifts and grants	40,452,846	45,916,372
Sales and services of organized activities	32,776,630	40,308,019
Miscellaneous and unitemized sources	11,383,036	12,810,925
Auxiliary enterprises and activities	143,923,145	157,424,398
Expenditures:		
Number reporting expenditures	1,609	1,628
Educational and general:		
Administration and general expense	\$62,826,835	\$66,968,127
Resident instruction	280,247,703	298,557,519
Organized research	27,266,103	34,286,841
Libraries	19,487,079	19,762,502
Physical plant operation and maintenance	69,611,807	72,594,486
Organized activities related to instruction	27,224,769	37,770,717
Subtotal	486,664,296	529,940,192
Extension	35,325,461	42,525,245
Total educational and general expenditures	521,989,757	572,465,437
Auxiliary enterprises and activities	124,184,299	137,327,911
Other noneducational expenditures	28,514,329	28,375,432
Capital outlay	83,764,961	50,201,751
Property:		
Number reporting property	1,440	(⁵)
Total	\$4,518,383,918	(⁵)
Endowment funds ⁶	1,686,282,767	(⁵)
Annuity funds	49,536,799	(⁵)
Student loan funds	28,784,189	(⁵)
Grounds, buildings, and improvements ⁷	2,303,302,483	(⁵)
Equipment	450,477,675	(⁵)

⁴ Excluding receipts specially designated for physical plant and nonexpendable funds.

⁵ Data not tabulated.

⁶ Including funds temporarily functioning as endowments.

⁷ Including unexpended plant funds.

NUMBER SURVIVING THROUGH COLLEGE PER 1,000 ENROLLED AT SPECIFIED LEVELS

¹ Sex distribution for private elementary schools revised since originally published.

² Does not include 1,000 men and 502 women duplicate in universities, colleges, and professional schools.

³ Data for 1927-28.

⁴ Data for 1929-30 and subsequent years include teachers in junior high schools.

⁵ Includes duplicates between noncollegiate and collegiate departments and critic teachers in institutions of higher education.

⁶ Data for 1917-18.

⁷ Data for 1926-27.

⁸ Distribution by sex estimated.

⁹ Data for 1939-40.

¹⁰ Data for 1928-29.

¹¹ Estimated on the basis of a study made by the War Emergency Council of Private Business Schools. Does not include part-time teachers. 1939-40 data revised since originally published.

NUMBER OF PERSONS GRADUATED FROM COLLEGE PER 100 PERSONS 21 YEARS OF AGE, 1869-70 TO 1941-42

Year	Number graduated from college ¹	Number of persons 21 years of age ²	Number graduated per 100 persons 21 years of age

KEY TO ABBREVIATIONS

Accred.—Accreditation of the institution to one or more of the national or regional accrediting associations.

Con.—Control of the institution, whether public, private or denominational.

The Student Body:

Coed.—Coeducational—for both men and women.

Cord.—Coordinate—separate colleges for men and women.

Men—For men only.

Women—For women only.

A.—Accredited by the Association of American Universities.

Admin.—Administration, administrative, administrator.

Bapt.—Controlled by Baptist Church.

Breth.—Controlled by Brethren Church.

C.—Controlled by city or municipal government.

Ch. of Breth.—Controlled by Church of the Brethren.

Ch. of Christ—Controlled by Church of Christ.

Ch. of God—Controlled by Church of God.

Ch. of N. Jeru.—Controlled by Church of New Jerusalem.

Chris.—Controlled by Christian Church.

Chris. Ref.—Controlled by Christian Reformed Church.

Co.—Controlled by County Government.

Cong.—Controlled by Congregational Church.

Disc.—Controlled by Disciples Church.

Dist.—Controlled by District Government.

E.—Accredited by New England Association of Colleges.

Evan. Luth.—Controlled by Evangelical Lutheran Church.

Evan. Ref.—Controlled by Evangelical and Reformed Church.

F. Bapt.—Controlled by Free Baptist Church.

F. Meth.—Controlled by Free Methodist Church.

Fr.—Controlled by Society of Friends.

Jewish—Controlled by Jewish Congregations.

Jn.—Four year college accredited by regional association as junior college.

L. D. S.—Controlled by Latter-day Saints.

Luth.—Controlled by Lutheran Church.

M.—Accredited by Middle States Association of Colleges.

Menon.—Controlled by Mennonite Church.

Meth.—Controlled by Methodist Church.

Morav.—Controlled by Moravian Church.

N.—Accredited by North Central Association of Colleges.

Naz.—Controlled by Nazarene Church.

P.—Controlled by private corporation, independent of church.

P. E.—Controlled by Protestant Episcopal Church.

Presb.—Controlled by Presbyterian Church.

R. C.—Controlled by Roman Catholic Church.

Ref.—Controlled by Reformed Church.

S.—Accredited by Southern Association of Colleges.

S. D. A.—Controlled by Seventh-day Adventist Church.

S. D. Bapt.—Controlled by Seventy Day Baptist Church.

St.—Controlled by state government.

T.—Accredited by American Association of Teachers' Colleges.

Ter.—Controlled by territorial government.

U. Breth.—Controlled by United Brethren Church.

U. Luth.—Controlled by United Lutheran Church.

U. Presb.—Controlled by United Presbyterian Church.

Unit.—Controlled by Unitarian Church.

Wes. Meth.—Controlled by Wesleyan Methodist Church.

*****—Accredited by professional association.

******—Provisionally accredited, or accredited with some reservation, or admitted on probation.

COLLEGE COLORS AND ACADEMIC COSTUME

In 1896 an intercollegiate commission was established to draw up a uniform code for caps, gowns and hoods representative of the various academic degrees. It was later incorporated as the Intercollegiate Bureau of Academic Costume, at Albany, N. Y., and is the official clearing house for all information regarding costume and college colors.

Bachelors' gowns are of black material, open or closed in front, with long pointed sleeve. Masters' gowns are usually of black silk, open in front, with long closed sleeve slit in the upper part of the arm. The doctors' gowns are of black silk, with round bell

sleeve. The open front is faced down with black velvet, while the sleeves are trimmed with three bars of velvet either of black or of the color of the doctorate held.

The Oxford cap or mortarboard of stuff or broadcloth is worn for all degrees. The doctorate is entitled to a tassel of gold or part gold, and the cap may be of velvet.

Hoods are usually of black silk lined with the official school colors, and edged with velvet in colors representing the degree held, in widths varying from five inches for doctors, three inches for masters and two inches for bachelors.

COLORS OF ACADEMIC DEGREES

Agriculture.....	Maize	Medicine.....	Green
Arts and Letters.....	White	Music.....	Pink
Commerce and Accounting.....	Drab	Oratory.....	Silver gray
Dentistry.....	Lilac	Pedagogy.....	Light blue
Economics.....	Copper	Pharmacy.....	Olive
Engineering.....	Orange	Philosophy.....	Blue
Fine Arts.....	Brown	Physical Education.....	Sage green
Forestry.....	Russet	Public Health.....	Salmon
Humanities.....	Crimson	Science.....	Gold yellow
Laws.....	Purple	Theology.....	Scarlet
Library Science.....	Lemon	Veterinary Science.....	Gray

Abbreviations for Academic Degrees and Positions

(Source: Degrees and Hoods of the World's Universities and Colleges)

A.B.—Bachelor of Arts.	B.L.—Bachelor of Law.
A.B.C.M.—Associate of the British College of Music.	B.Litt.—Bachelor of Literature.
A.B.S.A.—Associate of the British Society of Aviculture.	B.Met.—Bachelor of Metallurgy.
A.C.P.—Associate of the College of Preceptors.	B.Mus.—Bachelor of Music.
A.I.G.C.M.—Associate of the Incorporated Guild of Church Musicians.	B.Paed.—Bachelor of Pedagogy.
A.L.C.M.—Associate of the London College of Music.	B.Ph.—Bachelor of Philosophy.
A.M.—Master of Arts.	B.Pharm.—Bachelor of Pharmacy.
A.Mus.V.C.M.—Associate in Music, Victoria College of Music.	B.S.—Bachelor of Surgery.
A.N.A.M.—Associate of the National Academy of Music.	B.San.Sc.—Bachelor of Sanitary Science.
Artrt.D.—Doctor of Arts (U.S.A.).	B.Sc.Ag.—Bachelor of Science in Agriculture.
A.R.C.A.—Associate of the Royal College of Art.	B.Sc.Arch.—Bachelor of Science in Architecture.
A.Sc.—Associate in Science.	B.Sc.For.—Bachelor of Science in Forestry.
A.Th.—Associate in Theology.	B.Sc.Hortic.—Bachelor of Science in Horticulture.
A.V.C.A.—Associate of the Victoria College of Art.	B.Sc.P.H.—Bachelor of Science in Public Health.
A.V.C.A.—Associate of the Victoria College of Art.	B.Sc.Tech.—Bachelor of Science in Technology.
A.V.C.M.—Associate of the Victoria College of Music.	B.T.—Bachelor of Teaching.
B.A.—Bachelor of Arts.	B.Th.—Bachelor of Theology.
B.A.I.—Bachelor of Engineering.	B.Vet.S.—Bachelor of Veterinary Surgery.
B.Ag.—Bachelor of Agriculture.	C.E.—Civil Engineer.
B.Arch.—Bachelor of Architecture.	Ch.B.—Bachelor of Surgery.
B.A.O.—Bachelor of Obstetrics.	Ch.E.—Chemical Engineer.
B.A.S.—Bachelor of Agricultural Science.	Ch.M.—Master of Surgery.
B.C.E.—Bachelor of Civil Engineering.	C.P.E.—Certificate of the Preliminary Examination.
B.Ch.—Bachelor of Surgery.	D.Ch.—Doctor of Surgery.
B.Ch.D.—Bachelor of Dental Surgery.	D.C.L.—Doctor of Civil Law.
B.C.L.—Bachelor of Civil Law.	D.Can.L.—Doctor Canon Law.
B.Com.—Bachelor of Commerce.	D.D.—Doctor of Divinity.
B.Com.Sc.—Bachelor of Commercial Science.	D.D.S.—Doctor of Dental Surgery.
B.D.—Bachelor of Divinity.	D.D.Sc.—Doctor of Dental Science.
B.D.S.—Bachelor of Dental Surgery.	D.Eng.—Doctor of Engineering.
B.Dent.Sc.—Bachelor of Dental Science.	D.Hy.—Doctor of Hygiene.
B.E.E.—Bachelor of Electrical Engineering.	D.L.—Doctor of Law.
B.Eng.—Bachelor of Engineering.	D.Litt.—Doctor of Literature.
B.F.A.—Bachelor of Fine Arts.	D.Litt.Celt.—Doctor of Celtic Studies.
B.Hy.—Bachelor of Hygiene.	D.M.D.—Doctor of Dental Medicine.
	D.Met.—Doctor of Metallurgy.
	D.Mus.—Doctor of Music.
	D.O.L.—Doctor of Oriental Languages.
	D.Paed.—Doctor of Pedagogy.
	D.P.H.—Doctor of Public Health (U.S.A.).
	D.Ph.—Doctor of Philosophy.

D.Phil.—Doctor of Philosophy.
 D.Pharm.—Doctor of Pharmacy.
 D.Sac.Litt.—Doctor of Sacred Literature.
 D.Sc.—Doctor of Science.
 D.Sc.P.H.—Doctor of Science in Public Health.
 D.V.M.—Doctor of Veterinary Medicine.
 D.Vet.Sc.—Doctor of Veterinary Science.
 E.E.—Electrical Engineer.
 Ed.B.—Bachelor of Education.
 E.M.—Mining Engineer (U.S.A.).
 F.B.C.M.—Fellow of the British College of Music.
 F.B.S.A.—Fellow of the British Society of Aviculture.
 F.C.P.—Fellow of the College of Preceptors.
 F.C.T.B.—Fellow of the College of Teachers of the Blind.
 F.Coll.H.—Fellow of the College of Handicraft.
 F.Elo.V.C.M.—Fellow in Elocution, Victoria College of Music.
 F.Gld.O.—Fellow of the Guild of Organists.
 F.I.G.C.M.—Fellow of the Incorporated Guild of Church Musicians.
 F.L.C.M.—Fellow of the London College of Music.
 F.N.A.M.—Fellow of the National Academy of Music.
 F.Ph.(Eng.)—Fellow of the Board of Philosophical Study, England.
 F.Ph.S.—Fellow of the Philosophical society.
 F.R.C.O.—Fellow of the Royal College of Organists.
 F.S.C.O.—Fellow of the Society of Church Organists.
 F.S.Sc.—Fellow of the Society of Letters, Arts and Sciences.
 F.V.C.M.—Fellow of the Victoria College of Music.
 F.N.C.M.—Fellow of the National College of Music.
 F.T.S.C.—Fellow of the Tonic Sol-fa college.
 F.V.C.A.—Fellow of the Victoria College of Art.
 G.N.C.M.—Graduate of the National College of Music.
 Grad.D.—Graduate in Divinity.
 J.D.—Doctor of Jurisprudence (U.S.A.).
 J.A.—Licentiate in Arts.
 J.Ag.—Licentiate in Agriculture.
 J.B.C.M.—Licentiate of the British College of Music.
 J.C.E.—Licentiate in Civil Engineering.
 J.C.P.—Licentiate of the College of Preceptors.
 J.Elo.V.C.M.—Licentiate in Elocution, Victoria College of Music.
 J.H.D.—Doctor of Literature.
 Jic.Div.—Licentiate in Divinity.
 J.I.G.C.M.—Licentiate of the Incorporated Guild of Church Musicians.
 Litt.D.—Doctor of Letters.
 L.L.A.—Lady Literate in Arts (St. Andrews university).
 L.L.C.M.—Licentiate of the London College of Music.
 L.L.B.—Bachelor of Laws.
 L.L.D.—Doctor of Laws.
 L.L.M.—Master of Laws.
 L.M.—Master of Law.
 L.M.&S.—Licentiate in Medicine and Surgery.
 L.M.E.—Licentiate in Mining Engineering.

L.Mus.—Licentiate in Music.
 L.Mus.V.C.M.—Licentiate in Music, Victoria College of Music.
 L.N.A.M.—Licentiate of the National Academy of Music.
 L.N.C.M.—Licentiate of the National College of Music.
 L.S.Sc.—Licentiate in Sanitary Science.
 L.T.—Licentiate in Teaching.
 L.Th.—Licentiate in Theology.
 L.V.C.A.—Licentiate of the Victoria College of Art.
 L.V.C.M.—Licentiate of the Victoria College of Music.
 M.A.—Master of Arts.
 M.A.I.—Master of Engineering.
 M.A.O.—Master of Obstetrics.
 M.Arch.—Master of Architecture.
 M.B.—Bachelor of Medicine.
 M.B.A.—Master of Business Administration (U.S.A.).
 M.C.E.—Master of Civil Engineering.
 M.Ch.—Master of Surgery.
 M.Ch.D.—Master of Dental Surgery.
 M.Ch.Orth.—Master of Orthopaedic Surgery.
 M.Coll.H.—Member of the College of Handicraft.
 M.Com.—Master of Commerce.
 M.Com.Sc.—Master of Commercial Science.
 M.D.—Doctor of Medicine.
 M.D.S.—Master of Dental Surgery.
 M.Dent.Sc.—Master of Dental Science.
 M.E.—Mining Engineer.
 Mech.E.—Mechanical Engineer.
 M.E.E.—Master of Electrical Engineering.
 M.Eng.—Master of Engineering.
 Met.E.—Metallurgical Engineer.
 M.F.—Master of Forestry.
 M.F.A.—Master of Fine Arts.
 M.H.—Master of Hygiene.
 M.I.C.—Musical International College.
 N.L.—Master of Law.
 N.L.A.—Master of Landscape Architecture.
 M.Litt.Celt.—Master of Celtic Studies.
 M.M.E.—Master of Mechanical Engineering.
 M.Met.—Master of Metallurgy.
 M.O.L.—Master of Oriental Languages.
 M.S.—Master of Surgery.
 M.S.Arch.—Master of Science in Architecture.
 M.Sc.—Master of Science.
 M.Sc.P.H.—Master of Science in Public Health.
 M.Sc.Tech.—Master of Science in Technology.
 M.T.—Master of Teaching.
 Mus.Bac.—Bachelor of Music.
 Mus.M.—Master of Music.
 Mus.Doc.—Doctor of Music.
 Ph.B.—Bachelor of Philosophy.
 Ph.D.—Doctor of Philosophy.
 Pharm.B.—Bachelor of Pharmacy.
 S.C.F., T.C.L.—Senior Choral Fellow, Trinity college, London.
 S.C.L.—Student in Civil Law.
 Sc.D.—Doctor of Science.
 S.M.—Student in Medicine.
 S.T.B.—Bachelor of Divinity.
 S.T.D.—Doctor of Sacred Theology.
 Th.A.—Theological Associate or Associate in Theology.
 Th.L.—Licentiate in Theology.
 Th.Schol.—Scholar in Theology (Australia).
 Th.Soc.—Fellow in Theology (Australia).

Indian on the Nickel

James Earle Frazer, who designed the Indian-head or "Buffalo" nickel, said that he used no specific Indian as model, but that the head is an idealized portrait. Sev-

eral Indians posed for him for preliminary portraits, including Chief Two Guns White Calf, of the Blackfeet tribe, and Iron Tail, a Sioux chief of the Pine Ridge reservation.

EDUCATION IN MEDICINE

MEDICAL STUDENTS IN THE UNITED STATES AND CANADA,
1936-1945, BY SEX

RELIGION

Religious Origins

THE ANCIENTS

A common characteristic of all primitive societies was belief in unseen, supernatural powers. The first stage in the attempt to explain the facts and processes of life and nature was belief in a nebulous and undifferentiated supernatural force (**animatism**). The second stage was **animism**, belief in individual spirits, both good and bad, which controlled men and nature in some ways and consequently had to be placated. It was assumed that all objects possess life: the sun, moon, stars, vegetable and animal life, winds, rainbows, etc.

At first the rites by which to incur the pleasure of these spirits were known to all and were practiced individually. Then, however, medicine men, magicians and others supposed to have special powers to obtain spiritual favors arose, and dealing with the gods became a definite business.

The first gods were tribal only. **Fetchism** was the belief in active spirits embodied in objects, and amulets were worn to avoid harm from them. Tribal fetiches became gods and sacrifices were made before idols of them, prayers were originated to appeal to them and churches were erected to shelter them. Largely because of the presence of dead persons in dreams, **ancestral worship** developed and appeals were made to the spirits of dead relatives to assist the living. Mourning originated as a device to frighten away unfriendly spirits of the recently deceased.

From early times agriculture was associated with religion; the seasonal festivals with rituals which often were lewd, were considered necessary to assure good planting and harvest conditions. Many myths developed as to the origin of fertility. One, that of Osiris which originated with the ancient Egyptians, was of death, theft of the body, dismemberment, discovery by the goddess Isis and re-birth. This symbolized the vegetative cycle as did also the Persian myth of Mithras who started fertility by killing a bull whose blood nourished the ground. The spring and fall festivals roughly corresponding to Easter and Christmas were representative of birth and death.

THE FAITHS OF INDIA

Brahmanism: Before about 1,000 B. C. religion in India followed the typical pattern of a primitive society. **The Veda**, the Hindu's holy writ, is a mass of poetic myth and legend revealing the roots of magic, ancestral worship and superstition. With the invasion of India by the Aryans about 3,000 years ago Brahmanism, or caste, developed to protect the white invaders socially from the brown natives. The caste system spread among the whites themselves with the Brahmins, or priests, at the top. With its growth came the idea of the transmigration of souls, the yearning of every Hindu being to be reborn a member of a higher caste so as gradually to approach Nirvana, or release from human form. Through sacrifice and asceticism the Hindu believes in time he can be raised to the rank of divinities and lose his individuality in the all-pervading Brahman.

Jainism: This heresy was a natural revolt against asceticism, led by Vardhamana Mahavira in the sixth century B.C. Mahavira denied the divine origin of the Vedic writings,

Art and sculpture are believed to have originated in religious painting and idol making; architecture to have begun with temple building; poetry with prayer writing; music with psalm singing; drama with legend telling and dancing with the seasonal festivities. The Egyptians introduced embalming in the belief that correct burial made for immortality; at first only the kings were embalmed because only they were believed to have souls. **Totemism** originated as each tribe was represented by an animal supposed to be friendly; animals also were used to symbolize gods as the Egyptian sphinxes.

Religion became national as tribes became expansive and imperialistic. Victories were accredited to the friendship of the tribal gods with the result that worship increased, temples were built, taboos became stronger, gifts and sacrifices increased, priestly power grew.

The Greeks had an entire hierarchy of gods representing human virtues as well as objects. The Olympian cult offered little comfort and the Greeks turned to philosophy to make life more reasonable. The Romans resembled the Greeks in religious belief, Jupiter being the principal deity. In 31 B. C. Augustus revived religions of the state and deified himself.

Universal religions developed through the breakdown of nationalism as when the Hebrews were in exile. In Confucianism and Taoism the emphasis was upon universality of order in the world. Men of ethical or philosophical insight, as the Hebrew prophets, Buddha, Hindu philosophers, Zoroaster and Mohammed, taught god has the same relation to all men, not just those of a single tribe or nation. Gradually monotheism replaced polytheism, with the growth of missionary zeal a natural consequence.

What is recognized as religion today, as distinct from primitive superstition, began when man ceased to coerce the elements and began to cajole them. Civilization is the history of man's increasing victory over fear and religion was the bootstrap by which he raised himself from savagery.

which the Brahmins and Hindus accepted, opposed castes, preached violence and forbade any except self-killing. He taught "Three Jewels": right faith, right knowledge and right living. Similar to other Indian religions, Jainism teaches release from material bonds through successive reincarnations, but it holds that the individual entity is retained instead of being lost in the world-soul as the Hindus believe. After his death Mahavira was deified by his disciples. Modern believers in Jainism are ascetic, practicing the four virtues of gentleness, piety, penance and liberality in order to achieve final emancipation from earthly existence.

Buddhism: This widespread faith also began as a heresy, its progenitor supposedly having been Siddhartha Gautama, a prince who revolted against a life of pleasure and deserted his wife and child. It is he who is called Buddha, meaning "enlightened" because he is supposed to have reached the stage of knowledge wherein his entire past history, through a long chain of incarnations

in animal and human form, was revealed to him. After six years of rigid asceticism as a hermit, he emerged to preach that the primary curse is birth and the cause of birth is ignorance; vanity of life is caused by indulgence of desire and can be ended only by ending all desire, which can be accomplished, not by excessive asceticism but by sane and intelligent decency. His ways of living were: right faith, right judgment, right language, right purpose, right practice, right effort, right thinking and right meditation. Until Buddhist writings were discovered in Sanskrit, many scholars believed Buddhism did not antedate Christianity because it has so many tenets in common.

The Buddhist believes that a person is born again immediately after death and that his new form is a reward or punishment for his previous life; there are 136 Buddhist hells for the most depraved. Personality does not continue after death and memory of former existences is lost; in fact, the Buddhists deny the existence of the soul and are virtually atheists because no supreme power is known. The reincarnated status is determined, not by a supernatural power, but by a sort of virtue inherent in the nature of things, natural causes and effects at work in the universe. Complete Nirvana is the extinction of desires and theoretically can be attained during life as was the case with Gautama. Individuality is a curse and the faults of a previous existence, many times removed, may rise to cause misfortune at any time.

Gautama wrote nothing himself but after his death he was deified, extra gods and idols were created and Buddhism became a religion.

Hinduism: The rise of heresies led to reform among the Brahmans and in the fourth century B. C. Hinduism, today the national religion of India, arose as a compromise between Brahmanism and the native non-Aryan faiths. Although there are as many widely different Hindu sects as there are Christian, fundamental to all are belief in the Veda, the doctrine of salvation and belief in the caste system. Transmigration of souls is accepted but salvation is believed to come through faith in divinity; thus, Hinduism is theistic rather than either pantheistic as was Vedantism, or atheistic, as is

Buddhism. There are three Hindu gods—Brahma, Vishnu and Shiva. Vishnu is supposed to incarnate himself and show man the way; Krishna is to Vishnu about the same as Jesus to Jahveh—one of his incarnations. Shiva was originally a demon. The only true Hindu reality is God, or absolute being, with whom the saved soul is identical. Cremation of the dead, respect for the cow and employment of Brahman ministrations are Hindu tenets. Hindus long to die by the Ganges so as to have a better chance of obtaining higher caste upon reincarnation. Hinduism is a nationalistic rather than universal religion.

Gandhism: Mohandas Karamchand Gandhi, until recently called Mahatma (wise), has not attempted to found a new religion but, in addition to his efforts to restore Indian nationalism, has been the foremost Hindu religious reformer in centuries. Gandhi accepts the Vedas, believes in caste but not in untouchables (the lowest), accepts cow reverence, does not disbelieve in idol worship, believes in God and Oneness, rebirth and salvation and that none knows the scriptures who hasn't attained perfection in Innocence, Truth and Self Control and has renounced the acquisition or possession of wealth. These beliefs he practices and is distinguished by his passivity, tolerance and sympathy with other faiths. This breadth of view probably is due partly to his English education and travels.

Definite Gandhi beliefs are these: (1) the Vow of Truth as the rule of life; (2) the Doctrine of Ahimsa, or non-violence, offending none even in thought; (3) Vow of Celibacy, condoning marriage but not lust; (4) Vow of Control of the Palate to help control animal passions; (5) Vow of Non-Thieving; (6) Vow of Non-Possession; (7) Vow of Swadeshi, support of home barter, doing without things not Indian-made; (8) Vow of Fearlessness; (9) Vow regarding Untouchables, considered a curse; (10) Education through vernaculars; (11) Vow of Khaddar, spinning with the hands and wearing only home spun to teach the dignity of labor; (12) the religious uses of politics, his idea being that the Hindu should understand politics and not leave it to students alone.

These newer "ways of life" already have had a tremendous influence upon Hindus.

NEAR EASTERN FAITHS

Zoroastrianism: Zoroaster is now accepted as an historical personage having lived about 1,000 B.C. in ancient Persia. Miracles attended his birth and childhood and his religious preparation took place between his 15th and 30th years when he emerged as a reformer of superstition and heresy. He resisted the temptation of the evil spirit Ahriman and had visions of heaven and of Ahura Mazda or Ormazd, the supreme deity. His teachings were of a dualistic supernatural universe inhabited by the contending forces of good and evil, supposed to last for 12,000 years of world history. During the first 3,000 years the universe was controlled by the spiritual forces; after Ormazd created the world began a second 3,000 year period of struggle, with man, an agent of free will, choosing between the two forces. The third 3,000 year period was dominated by Ahriman until driven away by Zoroaster. When right triumphs over might there will be a general resurrection, each millennium of the final 3,000 years presided over by a prophet or savior descend-

ed from Zoroaster. The last will preside over the general resurrection which will begin eternal life: good thought, works and deeds are essential to share in it. Chief of the lesser gods serving Ormazd was Mithra, personification of truth and light. Ormazd himself was the spirit of civilization, demanding order and stability, a god of justice but not of mercy. Ancient priests were called Magi and were necromancers. After Zoroaster's death the number of minor gods was multiplied and ceremonies increased in number. Modern believers are called Parsis.

Judaism: Before the deliverance from Egypt the Jews' religion was animism. Moses, who led them in breaking their bonds of slavery, taught them the worship of Yahveh, god of the Kenites, whose mountain was Sinai. In their wars to conquer the Promised Land (Palestine) the Jews' god was Yahveh, a god of justice but not of mercy. Amos taught a human god of justice and preached fear of him; Hosea taught repentance and ten tribes were lost because they did not obey; Jeremiah told the Jews

to surrender to Babylon because the god of all the earth was displeased with them. The idea of themselves as the Chosen People originated in exile which continued until 538 B.C. when they were set free by Cyrus of Persia. Sacrifice and prayer were advocated to incur God's favor. The Old Testament shows the gradual change in the conception of a harsh god of war and retribution to one of love and mercy. Under Roman rule and after the destruction of Jerusalem in 70 A.D., with the resultant dispersion of the Jews, hope existed for a Messiah to establish the earthly Kingdom. This hope has made for racial unity throughout the centuries since. Jewry today is broken into many sects and reformed Jews no longer obey strictly the ancient Jewish laws set down in the early books of the Old Testament as essential for health and right living. Faith is essential to salvation in Judaism, the world's first important monotheistic religion.

Christianity: Christians believe that Jesus was the Jewish Messiah, the last and greatest of the prophets. Although there are innumerable variations of Christianity, common to them all is acceptance of Jesus as the incarnation of God and revealer of a way of life essential to salvation. Jesus not only taught but lived his ideals which caused him to be condemned by the Jewish populace which wanted a warlike deliverer. Jesus taught a reformed Judaism and did not ask his disciples to renounce the Hebrew faith; however, his religion was universal rather than national. Christianity teaches that the ideal life is one in harmony with the rules of a loving, forgiving God. Man is essentially a sinner but can be saved through repentance. Jesus' life of purity, self sacrifice and brotherly love is the one to be emulated. Jesus wrote nothing himself but the first four books of the New Testament contain versions of his life and teachings. It was the apostle Paul who was responsible for the spread of Christianity as a world religion rather than a Jewish Messianic faith. He made missionary trips among the Gentiles

(non-Jews) where he revealed Jesus as being the Savior which many local cults taught would some day come. The stories of Christian miracles, ceremonies and holidays resemble those of the Zoroastrians, but Christianity differs from all ancient religions in being highly ethical. A split from Judaism, it retains the Jewish Old Testament stories and prophecies as proving the Messianic nature of Jesus.

Mohammedanism: Islam, the proper name for Mohammedanism, was founded by Ubu'l Kassim, or Mohammed, who was born in 570 A.D., probably in Mecca, sacred city of the Arabian tribal god Allah. Mohammedans share the Jewish and Christian doctrine of God as the almighty creator and ruler of the universe and believe that there were six apostles commissioned to proclaim new laws for human living: Adam, Noah, Abraham, Moses, Jesus and Mohammed. Standing between God and man are believed to be fiery angels, the four principal ones of which are: Gabriel, angel of revelation; Michael, protector and guardian of the Jews; Azrael, angel of death, and Israfil, who will sound the trumpet on resurrection day. The four sacred books recognized as divinely inspired are the Pentateuch, the Psalms, the Gospels and the Koran. Belief in the resurrection and final judgment are important tenets, and Mohammed taught an elaborate explanation of heaven and hell. During his lifetime Mohammed waged a holy war for Mecca and taught that death fighting for Allah meant paradise. A pilgrimage to Mecca is still a holy act called hajj. The hejira was Mohammed's flight from that city to avoid assassination. The Mohammedans look for a number of signs described in the Koran as presaging approaching judgment day; there is a strong belief in predestination. Emphasis is put upon prayer and alms giving. There are prohibitory laws and civil and criminal laws established by the teachings of Mohammed, the Koran and tradition. Today there are 72 Islamic sects.

FAR EASTERN FAITHS

Confucianism: Kung-fu-tze, or Confucius, who lived in the fifth century B. C., was not a religious leader but a philosopher, for a time governor of Chung-tu, the founder of Chinese literature through voluminous editing and a conservator of Chinese folkways. In fact, he had little use for the supernatural, but, as in the case of Buddha who felt similarly, after his death he was deified by his disciples. Confucius taught filial obedience and loyalty to the state. He saw no need for gods or prayer but believed in order as heaven's own law and was the maker of aphorisms and proverbs. He was revered by his countrymen whose early religion was an advanced animism, rooted in the worship of spirits, of nature and of ancestors. His filial devotion to his dead mother won him popularity; ancestral worship has continued strong in China. The five cardinal virtues, according to Confucius, are: humanity, uprightness, decorum, wisdom, truth.

Taoism: Lao-Tze, founder of Taoism, was a contemporary of Confucius, and they met at least once. Tao is the "why" of life and teh is the "how," but Taoism, as Confucianism, is more of a philosophy than a

religion. Whereas Confucius taught filial piety and service to family, ruler and state, Taoism lacks these tenets. It is extremely individualistic rather than communistic, condemning organized government as interference with the natural state of things. In its insistence on individual virtue it resembles Christianity.

Shintoism: Before the sixth century B.C. Japanese religion was nameless and typically mythological. Some gods were good, others bad and some took human brides. The emperor of Japan is said to be descended from one such. When Buddhists began to proselyte in Japan the local deities came to be accepted as incarnations of Buddha, the two religions merged and Shinto priests became magicians and soothsayers. About 200 years ago there began a renaissance of pure Shintoism divorced from Buddhist and other foreign influence. Partly as a result of the movement the Shoguns were overthrown and the emperor restored. Royal ceremonials in Japan today are Shintoist and its chief tenet is obedience to the emperor; Shintoism, therefore, is stronger as a patriotic or political movement than as a religious one.

FIRE FIGHTING IN 1686

In 1686 the fire hazard of New York City was met with buckets. Every citizen with

two chimneys on his house had to have at least one fire bucket near at hand.

ROMAN CATHOLICISM

HIERARCHY OF THE CATHOLIC CHURCH

Source: Official Catholic Directory

Pius XII

The two hundred and sixty-first successor of St. Peter was born Eugenio Pacelli on March 2, 1876. He was ordained a priest on April 2, 1899. On April 23, 1917, he was appointed Apostolic Nuncio to Bavaria and promoted to the Titular See of Sardes. He was consecrated Archbishop by Pope Bene-

dict XV on May 13, 1917. He became Apostolic Nuncio to Germany on June 22, 1940. He was created and proclaimed a Cardinal December 16, 1929, appointed Secretary of State for the Vatican on Feb. 7, 1930. He was elected Pope on March 2, 1939, and was crowned on March 12, 1939.

THE MEANING OF THE ROMAN CATHOLIC MASS

The Roman Catholic Mass is a Sacrifice which commemorates daily Christ's suffering, passion and death, by which He gave His life to redeem mankind from its sins. Climax of the Mass comes in the Consecration, in which, by virtue of the power vested in the apostles at the Last Supper and transmitted through them to the ordained priests of the church, the substance of the bread and wine of the Mass is transformed into the substance of the Body and Blood of Christ.

When the Priest	Christ
Goes to the altar.	Goes to Mount Olivet
Commences Mass.	Begins to pray
Says the Confiteor.	Falls down and sweats blood
Goes up and kisses the altar.	Is betrayed by Judas with a kiss
Goes up to the Epistle side.	Is captured, and taken to Annas
Reads the Introit.	Is falsely accused by Annas
Says the Krie Eleison.	Is three times denied by Peter
Says the Dominus Vobiscum.	Looks at Peter and converts him
Reads the Epistle.	Is brought to Pilate
Says the Munda cor meum.	Is taken to Herod and mocked
Reads the Gospel.	Is taken back to Pilate
Uncovers the chalice.	Is shamefully exposed
Offers bread and wine.	Is cruelly scourged
Covers the chalice.	Is crowned with thorns
Washes his hands.	Is declared innocent by Pilate
Says the Orate Fratres.	Is shown to the people by Pilate
Prays in a low voice.	Is mocked and spat upon
Says the Preface and Sanctus.	Is condemned to crucifixion
Makes the Memento for the living.	Carries the cross to Mount Calvary
Continues to pray in a low voice.	Meets His Mother, other pious women
Blesses the bread and wine.	Is nailed to the cross
Elevates the Sacred Host.	Is raised on the cross
Elevates the chalice.	Sheds blood from the five wounds
Prays in a low voice.	Prays on the cross for men
Says aloud the Pater Noster.	Says the seven words on the cross
Breaks and separates the Host.	Gives up His spirit and dies
Drops a portion into the chalice.	Descends into Limbo
Says the Agnus Dei.	Is acknowledged as the Son of God
Administers Holy Communion.	Is laid in the sepulchre
Cleanses the chalice.	Is anointed by pious women
Prepares the chalice again.	Arises from the dead
Says the Dominus Vobiscum.	Appears to Mary and the disciples
Says the last prayers.	Ascends into heaven
Gives the blessing to the people.	Sends down the Holy Ghost
Says the Ite missa est.	Sends the apostles into the world
Reads the last Gospel.	Tells apostles to preach the Gospel

EUCHARISTIC CONGRESSES

Source: Franciscan Almanac

Eucharistic congresses are gatherings of the clergy and laity for the purpose of glorifying the Holy Eucharist by public adoration and general communions and for discussion of means to increase devotion to Our Lord in the Blessed Sacrament throughout the world. They may be national or international. The first congress owed its inspiration to Bishop de Segur of Lille, France. Since then the international Eucharistic congresses have been as follows:

Lille, France	1881	Angers, France	1901
Avignon, France	1882	Namur, Belgium	1902
Liege, Belgium	1883	Angoulême, France	1904
Freiburg, Switzerland	1885	Rome, Italy	1905
Toulouse, France	1886	Tournai, Belgium	1906
Paris, France	1887	Metz, Lorraine	1907
Antwerp, Belgium	1890	London, England	1908
Jerusalem, Palestine	1893	Cologne, Germany	1909
Reims, France	1894	Montreal, Canada	1910
Paray-le-Monial, France	1897	Madrid, Spain	1911
Brussels, Belgium	1898	Vienna, Austria	1912
Lourdes, France	1899	Malta	1913
		Lourdes, France	1914
		Rome, Italy	1922
		Amsterdam, Holland	1924
		Chicago, United States	1926
		Sydney, Australia	1928
		Carthage, Tunis	1930
		Dublin, Ireland	1932
		Buenos Aires, Argentina	1934
		Manila, Philippine Islands	1937
		Budapest, Hungary	1938

LAETARE MEDAL AWARDS

On Laetare or Rose Sunday, Notre Dame university awards the Laetare medal to some leader of the Catholic laity in the United States. Given in recognition of merit and as an inspiration to greater achievement, the award first was suggested in 1882 by Prof. James F. Edwards, of Notre Dame, and was sponsored by the Rev. Edward F. Sorin, C.S.C., founder of the university, and the Rev. Thomas E. Walsh, C.S.C., president. Inspiration for the practice came from the custom of popes bestowing each year the Golden Rose on some member of Catholic royalty.

The medal, a gold disc suspended from a gold bar, bearing in black enamel the words "Laetare Medal" has been awarded to the following:

1883	John Gilmary Shea, historian	1908	James C. Mohaghan, economist
1884	Patrick J. Keeley, architect	1909	Mrs. Frances Tiernan (Christian Reid), novelist

		1944	Anne O'Hare McCormick, journalist
		1945	Gardiner H. Shaw, diplomat

400 VARIETIES OF CHEESE

There are 400 varieties of domestic and foreign cheese. Only exporters are familiar with all of them.

LEADING PROTESTANT DENOMINATIONS

Source: Yearbook of American Churches, 1943

Disciples of Christ:

In the revival period of the early 19th century, a movement under Thomas Campbell and his son, Alexander, resulted in the establishment of a fellowship called Christians, or Disciples. They believe that sects are unscriptural, and are biblicalists and immersionists.

Headquarters: Missions Building, Indianapolis, Ind.

Officers: Pres., C. E. Lemmon; Gen. Sec., Graham Frank; Treas., J. H. Nance; Rec. Sec., Elizabeth Jameson; Transportation Sec., H. B. Holloway.

Congregational and Christian:

Congregational churches date back to the Pilgrim Fathers and the early colonists of New England in 1620. The Christian churches date back to the Wesleyan and revival movements at the end of the 18th century. These two groups of churches were merged at Seattle, Wash., in 1931.

Headquarters: 287 4th Ave., New York, N.Y. Officers: Mod., Rev. Ferdinand Q. Blanchard; Ass't Mods., John V. Sees, Rev. Russell H. Stafford, Rev. Alfred Grant Walton, Prof. William J. Faulkner; Chaplain, Glenn J. Witherspoon; Sec., Rev. Douglas Horton; Assoc. Sec., Rev. Frederick L. Fagley; Treas., L. Nelson Nichols.

Colored Methodist Episcopal Church:

In 1870 the General Conference of the M.E. Church-South approved the request of its colored membership for the formation of their conferences into a separate ecclesiastical body.

Officer: Sec., Prof. W. A. Bell, 141½ Auburn Ave., N. E., Atlanta, Ga.

Evangelical Lutheran Synod of Missouri, Ohio and other states:

This body, the largest constituent part of the Synodical Conference, was organized in 1847, holds to an unwavering confessionalism, and is the leader in the conservative group among the Lutherans.

Officers: Pres., Rev. J. W. Behnken; Sec., Rev. M. F. Kretzman; Treas., W. H. Schlueter; Dir. Publ., Rev. L. Meyer; Sec., Miss., Rev. F. C. Streufert; Stat., Rev. S. Michael; Aud., A. W. Huges; Fin. Sec., Theo. W. Eckhart.

Churches of Christ:

A church founded by Mary Baker Eddy in 1879 to restore the healing power of original Christianity. As defined by Mrs. Eddy her religion is the scientific system of divine healing.

Headquarters: 107 Falmouth Street, Boston, Mass.

Officers: Bd. of Dir., W. Stuart Booth, Mrs. Nelia E. Ritchie, George Wendell Adams, Charles E. Heitman, Francis Lyster, Jandron; Pres., Mrs. Elisabeth F. Norwood; Treas., Roy Garrett Watson; Clk., Mary G. Ewing; First Reader, Gordon V. Comer; Sec. Reader, Margaret Crawford.

United Lutheran Church in America

This body dates back to the Ministerium of Pennsylvania, organized in 1748, and beyond that to early Colonial days. It represents the union of the General Synod, the General Council and the United Synod of the South in 1918.

Headquarters: 39 East 35th St., New York, N. Y.

Officers: Pres., Rev. F. H. Knubel; Sec., Rev. W. H. Greever; Treas., E. Clarence Miller.

Presbyterian Church in the United States:

This body is the branch of the Presbyterian Church which separated from the main body at the time of the Civil War. It is often called the "Southern" Presbyterian Church.

Officers: Mod., Dr. Donald W. Richardson; Stat. Clk.-Treas., Rev. E. C. Scott, 1120 Liberty Bank Bldg., Dallas, Tex.

Evangelical and Reformed Church:

This body was formed on June 26, 1934, by a union of the Evangelical Synod of North America and the Reformed Church in the United States, at Cleveland, Ohio. The union was unique in that it left all details to be adjusted after the union. The Constitution was declared in effect at the General Synod which met at Lancaster, Pa., in June, 1940. The merged boards were organized and on February 1, 1941, took over the work carried on by the two former denominations.

Officers: Pres., Rev. L. W. Goebel, 77 West Washington St., Chicago, Ill.; Vice-Pres., Rev. George W. Richards, Lancaster, Pa.; 2nd Vice-Pres., Hon. D. J. Snyder; Sec., Rev. William E. Lampe; Treas., F. A. Keck.

Assembles of God:

An evangelical, pentecostal body formed in Arkansas in 1914.

Headquarters: 336 West Pacific Street, Springfield, Mo.

Officers: Gen. Supt., Rev. E. S. Williams; Asst. Supt., Fred Vogler; Gen. Sec.-Treas., Rev. J. R. Flower; Miss. Sec., Rev. Noel Perkin; Edit. Publ., Rev. Stanley H. Frods-ham.

Baha'i Faith:

Followers of Baha'u'llah, a Persian prophet (1817-1892). The Faith has no clergy, nor churches for ritualistic worship but each community constructs its own Mashriqu'l-Adhkar, or House of Worship, for prayer, meditation and reading of the Sacred Scriptures.

Officer: Sec., Horace Holley, 536 Sheridan Rd., Wilmette, Ill.

Church of the United Brethren in Christ:

Under the leadership of Philip William Otterbein, a German Reformed minister, and Martin Boehm, a Mennonite, an evangelistic movement among the Germans in Pennsylvania, resulted in the establishment of this body in 1800.

Headquarters: United Brethren Building, Dayton, Ohio.

Board of Administration: Pres., Bishop A. R. Clippinger; Exec. Sec., Rev. D. T. Gregory; Gen. Mgr., Preach. Pension Bur., Prof. H. H. Baish.

National Baptist Convention, U.S.A., Inc.:

The older and parent convention of Negro Baptists. This body is to be distinguished from the National Baptist Convention of America, usually referred to as the "unincorporated" body. The "incorporated" convention is a constituent member of the Federal Council of the Churches of Christ in America.

Officers: Pres., Rev. D. V. Jemison, 1605 Lapsley St., Selma, Ala.; Vice-Pres.-at-Large, Rev. A. L. Boone; Reg. Vice-Pres., Rev. T. S. Harten, Rev. E. W. Perry, Rev. W. D. Carter; Sec., Rev. J. M. Nabrit; Treas., Rev. B. J. Perkins; Stat., Rev. Roland Smith; Hist., Rev. T. S. Boone.

The Methodist Church:

In April, 1939, the Uniting Conference forming the Methodist Church was held by representatives of the Methodist Episcopal Church, the Methodist Episcopal Church, South, and the Methodist Protestant Church. The Methodist Church in the United States originated with the efforts of John and Charles Wesley, leaders of the revival movement in England in the 18th century.

Methodist emigrants from Ireland planted Methodism in America about 1760. In 1771 Francis Asbury, one of Wesley's preachers, later a Bishop, landed in Philadelphia. The Methodist Episcopal Church was organized in 1784-85. The Methodist Episcopal Church, South, dates from 1846, the separation from the Methodist Episcopal Church having taken place over the slavery issue. The Methodist Protestant Church dated from 1830, and was organized over the issue of lay representation.

Officers: The Bishops preside in turn; Sec. of General Conference, Lud H. Estes, 1120 Faxon Ave., Memphis, Tenn.; Council of Bishops: Pres., Bishop W. W. Peele; Sec., Bishop G. Bromley Oxnam.

Southern Baptist Convention:

In 1845 Southern Baptists withdrew from the General Missionary Convention over the question of slavery and other matters and formed the Southern Baptist Convention. Officers: Pres., Hon. Pat M. Neff, Baylor Univ., Waco, Tex.; Secs., (Rev. Hight C. Moore, J. Henry Burnett; Exec. Sec., Dr. Austin Crouch; Sec. Prom., Dr. J. E. Dillard; Pub. Dir., Dr. Walter M. Gilmore.

Presbyterian Church in the United States of America.

This body, distinguished by its representative form of government and its Calvinistic theology, appeared among the earliest colonists of America. Its first church was established about 1640 and its presbytery in 1706.

General Assembly Headquarters: Witherspoon Bldg., Philadelphia, Pa.

Officers: Mod., Dr. Henry Sloane Coffin,

Union Theological Seminary, New York, N. Y.; Sta. Clk., Rev. William Barrow Pugh; Treas., Fidelity-Phila. Trust Co., Philadelphia, Pa.

The Protestant Episcopal Church:

This body entered the colonies with the earliest settlers (Jamestown, Va., 1607), as the Church of England. It became autonomous and adopted its present name in 1789. Headquarters: 281 4th Ave., New York City, N. Y.

Officers: Presiding Bishop, Rt. Rev. Henry St. George Tucker; Sec., Ho. of Bish., Rev. John H. Fitzgerald; Pres., Ho. of Deputies, Vacant; Sec., Ho. of Deputies, Dr. Franklin J. Clark; Treas. Conv., Dr. Raymond F. Barnes.

Northern Baptist Convention:

The early historic local independency of Baptist Churches in America tended to impede the formation of any general organization until in 1814 a General Missionary Convention was formed to permit Baptists to express themselves in terms of missionary activities. In 1845 the state conventions in the south withdrew to organize the Southern Baptist Convention. In 1907 the Northern Baptist Convention was organized, a delegated body, under whose direction the many agencies of the Baptists in the North and West now operate.

Headquarters: 152 Madison Ave., New York City, N. Y.

Officers: Pres., Rev. Joseph C. Robbins; Vice-Pres., Rev. R. C. Walker; Mrs. O. R. Judd; Cor. Sec., Rev. Joseph C. Hazen; Treas., Harold J. Manson.

Jewish Congregations:

Jews arrived in the colonies before 1650. The first congregation is recorded in 1656, in New York City, the Shearith Israel (Remnant of Israel).

Headquarters for Congregational and Rabbinical Organizations: Union of American Hebrew Congregations, Merchants Bldg., Cincinnati, Ohio. Pres., Robert P. Goldman; Sec., Nelson Glueck.

DESMET MEDAL AWARDS

The DeSmet Medal was awarded annually from 1930 until 1943 by Gonzaga University of Spokane, Washington, to a Catholic layman in recognition of an outstanding contribution to the Catholic Church. The award was announced each year on March 16, date of Gonzaga's founding. The medal commemorates Father Peter DeSmet, S.J., pioneer missionary priest among the Flat-head Indians.

Recipients have been:

- 1930 James A. Walsh, Helena, Mont.
- 1931 John P. Kavanaugh, Portland, Oregon
- 1932 Dr. Louis W. Allard, Billings, Montana
- 1933 James D. Farrell, Los Angeles, California

- 1934 Thomas A. Bradley, New York, N. Y.
- 1935 Hon. Francis A. Garrecht, San Francisco, California
- 1936 James F. McCarthy, Wallace, Idaho
- 1937 Alfred J. Talley, New York, N. Y.
- 1938 Mother Katherine Drexel, Cornwell Heights, Pennsylvania
- 1939 Hon. Anthony J. Diamond, delegate to Congress from Alaska
- 1940 Herbert Cory, Seattle, Wash.
- 1941 John H. Wourms, Wallace, Ida.
- 1942 Dr. E. S. Murphy, Missoula, Montana

Presentation of the medal has been halted temporarily due to war conditions.

EASTERN ORTHODOX CATHOLIC BODIES

Greek Orthodox Church (Hellenic)—

Pres., Most Rev. Archbishop Athenagoras; Asst. Bishop, Rt. Rev. Bishop Callistos; Vice Pres., Rev. Basil Efthimious; Sec., Rev. Basil Lokis; Treas., Michael Thierry; Trust-

ees, Rev. Germanos Polyzoides, Polyvios Koryllos, Paul Demos, John Plastropoulos, Anthony Anastasiades, Hdqts., 25-19 30th drive, Astoria, L. I., N. Y.

LOBSTER TAILS

In 1940 Americans ordered two million pounds of lobster tails, ice-packed for shipping 7,810 miles to New York City from

Africa. These rock or Cape spiny lobsters are really sea crawfish, lacking the big pincers of the lobster.

Rt. Rev. Frank H. Touret, D.D., Tryon, N. C., Retired Bishop.

Rt. Rev. Beverley D. Tucker, D.D., LL.D., 2241 Prospect Ave., Cleveland 15, Ohio, Bishop of Ohio.

Rt. Rev. H. St. George Tucker, D.D., LL.D., 281 Fourth Ave., New York 10, N. Y., Presiding Bishop.

Rt. Rev. Vedder Van Dyck, S.T.D., Bishop's House, Rock Point, Burlington, Vt., Bishop of Vermont.

Rt. Rev. C. Alfred Voegeli, Port-au-Prince, Haiti, Missionary Bishop of Haiti.

Rt. Rev. John M. Walker, D.D., 108 East 17th St., Atlanta, Ga., Bishop of Atlanta.

Rt. Rev. Sumner F. D. Walters, 1209 N. St., Fresno, Calif., Missionary Bishop of San Joaquin.

Rt. Rev. John C. Ward, D.D., 307 Linwood Ave., Buffalo 9, N. Y., Retired Bishop.

Rt. Rev. Benjamin M. Washburn, D.D., 24 Rector St., Newark 2, N. J., Bishop of Newark.

Rt. Rev. John C. White, D.D., 821 South 2nd St., Springfield, Ill., Bishop of Springfield.

Rt. Rev. Lewis B. Whittemore, D.D., 134 No. Division Ave., Grand Rapids 2, Mich., Bishop of Western Michigan.

Rt. Rev. Robert F. Wilner, 555 Calle Isaac Peral, Manila, P. I., Suffragan Bishop of the Philippine Islands.

Rt. Rev. John D. Wing, D.D., LL.D., 130 North Main St., Orlando, Fla., Bishop of South Florida.

Rt. Rev. Edward P. Wreth, 323 West 6th St., Erie, Pa., Bishop of Erie.

Rt. Rev. Hunter Wyatt-Brown, D.D., LL.D., Blue Ridge Summit, Pa., Retired Bishop.

Rt. Rev. Winfred H. Ziegler, D.D., P.O. Box 17, Laramie, Wyo., Missionary Bishop of Wyoming.

BRaille INSTITUTE OF AMERICA, INC.

The Braille Bible Society, Inc. was merged with the Braille Institute of America, Inc., in 1937, and the name of the latter group is now used. The organization carries on printing and distribution of the Bible in Braille on an even wider basis than previously.

The Institute publishes the King James version of the Bible. In Braille it forms 21 volumes, 11 inches by 11 inches, varying from two to four inches in thickness. Sixteen volumes are required for the Old Testament and five for the New Testament. Present

cost of producing the Bible in Braille is \$52.50 per set, an average of \$2.50 a volume.

Since 1923, when the work was started, nearly 18,000 volumes of the Scriptures in Braille have been distributed by the society to the English reading blind throughout the world. The blind who can pay are charged a nominal sum for the books, or, if they are unable to pay, the set is given to them free.

Headquarters of the organization is at 741 North Vermone avenue, Los Angeles 27, California.

CORN NUTRIENTS

It takes about 150 pounds of nitrogen, 25 pounds of phosphorus and 75 pounds of

potassium delivered into the corn plants to produce 100 bushels of corn.

YOUNG PEOPLE'S SOCIETY OF CHRISTIAN ENDEAVOR

Headquarters of the Christian Endeavor movement is in the World's Christian Endeavor Building, Mount Vernon and Joy Streets, Boston 8, Mass. The building was erected in 1918 by the contributions of one hundred thousand young people throughout the world.

Present officers are: President, Rev. Daniel A. Poling, D.D.; Honorary Vice-president, Rev. William Hiram Foulkes, D.D.; Vice-presidents, Mrs. Helen Lyon Jones; Rev. J. Gordon Howard, D.D.; Rev. Lawrence W. Bash; Rev. Clifford Earle; Mr. Arch J. McQuilkin; Executive Secretary and Treasurer, Carroll M. Wright; Associate Secretary, Rev. Stanley B. Vandersall, D.D.; Educational Secretary, Rev. P. M. Simms; Field Secretary, Ernest S. Marks.

Christian Endeavor was formed February 2, 1881, in the Williston Congregational Church, Portland, Maine, by the Rev. Francis E. Clark, pastor, for the purpose of training a large number of young people in the duties of church membership and the activities of the Christian life. Earliest societies

were for the young approaching maturity, but on March 29, 1883, the first Junior Christian Endeavor Society was organized, and in 1891 the first Intermediate society was established. Now, under graded Christian Endeavor, there are societies adapted to all ages, beginning with Juniors and including adults and graduate members, called Alumni.

Christian Endeavor Societies total about 80,000, with a total of more than 4,000,000 members. Groups are found in eighty or more religious denominations, and in practically every country in the world.

Purpose of the society, as expressed in its constitution is "to promote an earnest Christian life among its members, to increase their mutual acquaintance, to train them for work in the church, and in every way to make them useful in the service of God and their fellow men."

The International Society of Christian Endeavor serves as clearing-house, for all forms of Christian Endeavor activity.

WHERE TO LOOK IN THE BIBLE

Source: American Bible Society

When "things look blue," read Isaiah, chapter 40.

When tempted to do wrong, read the 139th Psalm.

If you are facing a crisis, read the 46th Psalm.

When you are discouraged, think over Psalm 23.

If you are "bored," read Psalms 103 and 104, or Job, chapters 38-40.

When business is poor, read Psalm 37.

When you are lonely, or fearful, read over Psalm 27.

When you are anxious for dear ones, read the 107th Psalm.

When you plan your budget, read St. Luke's Gospel, chapter 19.

To live successfully with your fellowmen, follow Romans, chapter 12.

If you are sick or in pain, read Psalm 91.

When you leave home for labor or travel, carry Psalm 121 with you.

When you are very weary, seek St. Matthew 11:28-30, Romans 8:31-39.

When everything seems to be going from bad to worse, try II Timothy 3.

The best investment is described in St. Matthew's Gospel, chapter 6.

Does God figure in our national life? Read Deuteronomy 8.

When your friends seem to go back on you, hold fast to I Corinthians 13.

For an inward peace, consider the 14th chapter of St. John's Gospel.

Have you been placed in a position of great responsibility? Read Joshua, chapter 1.

If you have been bereaved, there is a message for you in I Corinthians 15 and Revelation 21.

For a stirring record of what trust in God can do, turn to the 11th chapter of Hebrews.

If you are satisfied with being "well-to-

do," read chapters 15 and 16 of St. Luke's Gospel.

If you have experienced severe losses, read the last paragraphs of chapter 8 of Romans.

If you are having to put up a stiff fight, there is a fine equipment listed at the end of Ephesians.

When you have sinned, read I John 1, St. John 3:1-21, Isaiah 53, and make Psalm 51 your prayer.

The way of prayer—I Kings 8; Psalms 42, 51; St. Luke's Gospel, chapters 11:1-13, 18:1-14; St. John's Gospel, chapter 17; Ephesians, 3.

If you have a fear of death, read St. John, chapters 11, 17 and 21; II Corinthians, chapters 4, 5; Romans, chapter 8; Revelations, Chapters 7, 21 and 22.

The Ten Commandments—Exodus 20; Deuteronomy 5.

The Shepherd Psalm—Psalm 23.

The Birth of Jesus—St. Matthew 1, 2; St. Luke 2.

The Sermon on the Mount—St. Matthew 5, 6, 7.

The Beatitudes—St. Matthew 5:1-12.

The Parable of the Sower—St. Matthew 13; St. Mark 4; St. Luke 8.

The Parable of the Good Samaritan—St. Luke 10.

The Great Commandments—St. Matthew 22:34-40.

The Lord's Prayer—St. Matthew 6; St. Luke 11.

The Last Judgment—St. Matthew 25.

The Parable of the Prodigal Son—St. Luke 15.

The Crucifixion, Death and Resurrection of Jesus—St. Matthew 26, 27, 28; St. Mark 14, 15, 16; St. Luke 22, 23, 24; St. John 13-21.

Faith, Hope and Love—I Corinthians 13.

The Seven Last Words of Christ

"My God, My God, why hast thou forsaken me?"—Matthew 27:46; Mark 15:34.

"Father, forgive them, for they know not what they do."—Luke 23:34.

To one of the malefactors: "Verily, I say unto thee, today shalt thou be with me in paradise."—Luke 23:43.

"Father, into thy hands I commend my spirit."—Luke 23:46.

To his mother: "Woman, behold thy son."

To John: "Behold thy mother."—John 19:26, 27.

"I thirst."—John 19:28.

"It is finished."—John 19:30.

 V.G.—Vicar General.
 Virg.—Virgin.
 V. Rev.—Very Reverend.
 V.T.—Old Testament.
 W.F.—White Fathers (Missionaries of Africa).

GOTTHEIL MEDALISTS

The Gottheil Medal is presented by Zeta Beta Tau fraternity annually for distinguished service to Jewry. National headquarters for the organization are at 45 West 45th Street, New York City, 19; N. Y.

Recipients of the award have been:

- 1925 Dr. Stephen S. Wise
 1926 Aaron Sapiro
 1927 David Brown
 1928 Julius Rosenwald
 1929 Felix M. Warburg
 1930 Herbert H. Lehman
 1931 No award
 1932 Rev. John Haynes Holmes

- 1933 Pilgrimage team of the National Conference of Christians and Jews (Rev. Everett R. Clinchy, Father J. Elliot Ross and Rabbi Morris S. Lazaron)
 1934 No award
 1935 James J. McDonald
 1936 Franklin Delano Roosevelt
 1937 Judge Julian Mack
 1938 Dorothy Thompson

Since 1938 no medal has been presented, because, in the words of the trustees of the medal, "In times of war, when the entire nation is geared to heroic sacrifice, it would be inappropriate to attempt to select individual candidates for honor."

The award will probably be revived in 1946.

STATISTICS OF THE BIBLE

According to the Rev. J. H. Vincent in **Curiosities of the Bible**, a convict serving a long term in solitary confinement discovered the following regarding the Bible:

It contains 3,586,489 letters, 773,692 words, 31,173 verses, 1,189 chapters and 66 books.

The word and appears 46,277 times, the word **Lord** 1,855 times, the word **reverend** only once (9th verse of the 11th Psalm).

The middle verse is the 8th verse of the 118th Psalm.

The 21st verse of Ezra VII contains all the letters of the alphabet except J.

The 19th chapter of II Kings and the 37th chapter of Isaiah are alike. The 8th, 15th, 21st and 31st verses of the 107th Psalm are alike. Each verse of the 136th Psalm ends alike.

The longest verse is the 9th verse of Esther VIII. The shortest verse is the 35th verse of John XI.

There are no words or names of more than six syllables.

AMERICAN BIBLE SOCIETY

During 1944, the American Bible Society, Park avenue and 57th street, New York City, 22, N. Y., distributed the largest number of volumes in its 129-year history. Totals were 819,287 Bibles; 2,584,048 Testaments; 8,768,804 Portions; a grand total of 12,172,139 books.

The society's work was done in 119 lan-

guages in 1944, a smaller language total than in previous years because of the war situation. The Bible, in entirety or some portion of it, has now been translated into 1068 languages, six having been added in 1944.

The total number of Scriptures distributed by the society since its organization in 1816 is 343,877,046.

CHICAGO BIBLE SOCIETY

The Chicago Bible Society, with offices at 35 East Wacker drive, Chicago, reports through its associate secretary, the Rev. Harvey Clark, that during 1944, 23,744 copies of the Bible were distributed. The society also distributed, in the same year, 26,624 New Testaments, 262,484 Portions, and 298 Concordances. Total distribution for the society, since its founding in 1840, has

been 5,636,732 volumes.

The same society reports that the American Bible Society, in 129 years of service, has distributed 34,079,206 Bibles; 309,979,850 Testaments and Portions, making a total number of volumes of Scripture of 343,877,056. In the past year, that society distributed 12,172,139 volumes, of which 8,900,287 were whole Bibles.

SAVINGS FOR 2 YEARS WILL CURB INFLATION

Individual savings in the next two years should continue at a high level and thus aid inflation control efforts, says the Institute of Life Insurance. Aggregate individual savings represents more than \$1 out of every \$5 of national income since 1942, it said.

In World War I, individual savings were approximately \$1 out of \$6 of total income

payments to individuals. The rate was the same in 1919. In 1920 it was \$1 out of \$8, lower than the preceding year, but higher than other peace time years, including 1929 when only \$1 out of \$10 of aggregate individual incomes was saved, about half the current rate.

Rail Improvement

Air conditioning is the greatest single contribution to travel by railroad, and 72 degrees is ideal winter temperature, according to a survey recently completed by the New York Central Railroad. One hundred-sixty

thousand sleeping car passengers participated in the survey, which also indicated that summer temperatures within cars should vary according to outside heat.

INCOME TAX

TAX REDUCTION BILL OF 1945

President Truman signed a bill on November 9 to reduce taxes on individuals and business \$5,920,000,000 in 1946. It was the first piece of legislation to lower taxes in sixteen years. The last tax-slashing bill was signed by President Hoover just before Christmas, 1929.

This bill removed about 12 million low income persons from the income tax rolls and established a general reduction of 10 percent for all persons making less than \$50,000.

Other provisions of the bill were:

1.—In addition to removing 12,000,000 from the tax rolls and assuring 10 per cent reduction for individuals making up to \$50,000, provided smaller cuts for those with incomes over \$50,000. Total reductions for individuals will amount to \$2,644,000,000. In effect Jan. 1.

2.—Provided special tax treatment for veterans of World War II, forgiving all levies on service pay of enlisted men in wartime and giving officers three years in which to settle with the government.

3.—Took \$3,136,000,000 off taxes on business in 1946, principally through repeal of the war-imposed 85.5 per cent excess profits tax on corporations.

4.—Repealed \$5 use tax on automobiles and boats at saving of \$140,000,000, effective July 1, 1946.

5.—Froze Social Security tax in 1946 at 1 per cent on employees' pay and employers' payrolls. Without the "freeze" this tax would have increased Jan. 1 to 2.5 per cent for each.

The bill made no change in the excise levies on so-called luxury items such as liquor, luggage, furs, jewelry and cosmetics.

Estimates for 1946 are that the Treasury will collect approximately \$26,500,000,000. The national debt is expected to increase about \$12,000,000,000 in 1946.

Revenues hit more than \$45,000,000,000 in 1944. They were about \$5,000,000,000 a year before the war.

Persons removed from the tax rolls next

year are 12,000,000 who now pay only the 3 per cent normal tax levied on all net income above \$500, regardless of dependents.

Under the new law the individual surtax exemptions—\$500 for the taxpayer and \$500 tax for each of his dependents—is applied to the normal tax.

A married man pays no income tax until his earnings pass \$1,000. The exemption increases by \$500 with each dependent.

Comparison of present withholding taxes and those of 1946 under new tax bill:

Wash.	Retail sales.	x	3 1/2	3				Wholesalers (except wholesalers of wheat, oats and barley, which are 1/100%), extractors, manufacturers, printers and publishers, 1/4%; all other businesses and professions not specifically exempted, 1 1/2%.	

W. Va.	Retail sales ¹⁸	2	65/100	2	1.3-5.2	Wholesaler, 195/1000%; extracting, 1.3-7.8%; manufacturing, 39/100%; contractors, 2%; industrial bean companies, 1%; all other businesses not specifically exempted, 1%.
Wyo.	Retail sales	2	65/100	2	2	

¹ Type of tax: (1) Retail sales—imposed upon sales of tangible personal property at retail or for consumption. In most States applies also to admissions and restaurant and public utility sales. (2) General sales—applies to wholesaling, extractive industries and manufacturing in addition to sales at retail. (3) Gross receipts—include sales of public services and personal and professional services in addition to transactions and receipts under (1) and (2). (4) Gross income—applies, in addition to all transactions and receipts under (1), (2), and (3), to receipts from non-business activities such as wages and salaries of employees, interest, rents and dividends. ² New automobiles and telegraph services, gas and electricity sales. In Illinois the rates on utilities are imposed under a separate act. ³ Rate applies to all public utilities except transportation. ⁴ Telephone and telegraph services. ⁵ On gas and electricity only. ⁶ Retail sales of pasteurized milk. ⁷ 1%. ⁸ Automobiles and trucks. ⁹ Industrial sales receive a preferential rate of 1%. ¹⁰ Automobiles, trucks or tractors. ¹¹ Tax applies to rentals as well as sales. ¹² Maximum tax of \$15 on a single article. ¹³ A special excise tax of 2% is applied to an automobile at the time it is transferred, used or first registered in the State. ¹⁴ Applies not only to sales of tangible property but also to all services except professional and personal services, services rendered by an employer, and services furnished by corporations subject to the control of the Public Service Commission and State Road Commission. ¹⁵ Applies to all public utilities except water.

REVENUE ACT OF 1943

The Revenue Act of 1943 became law February 25, 1944, over presidential veto.

INDIVIDUAL

1. Rates, Exemptions and Credits.

No changes were made in the normal and surtax rates on the income of individuals from the Revenue Act of 1942.

The personal exemptions and the dependent credit were left unchanged: \$500 for single persons; \$1,200 for married persons and heads of families; and \$350 for each dependent.

2. Victory Tax.

The Victory Tax rate was reduced from 5 to 3 percent of Victory Tax net income in excess of \$624, regardless of family status. Credits allowed against the Victory Tax were repealed.

3. Deductions

The Revenue Act of 1943 provided a special \$500 deduction from the gross income for blind persons; amounts received as mustering-out payments for World War II veterans as deductible from the gross income; and amounts received as cost-of-living allowances or post allowances were excluded for those of the Diplomatic or Foreign service.

Excise taxes paid are not deductible, except where the tax paid is a trade or business expense or is incurred in the production of income.

For sole proprietors and partners, business losses of more than \$50,000 for five consecutive years are limited to a net loss of \$50,000 in any such year.

4. Other Changes.

Another provision of the Revenue Act of 1943 limits the tax on back pay. If back pay exceeds 15 per cent of gross income for the taxable year, the maximum tax on it is the amount it would have increased taxes in the years to which it applied.

CORPORATIONS

1. Rates, Exemptions, and Credits

No changes in corporate normal or surtax rates were made in the Act of 1943.

However, under the Revenue Act of 1943, the excess-profits tax rate was raised from 90 to 95 per cent, thus increasing the net rate (after the 10 per cent post war credit) from 81 per cent to 85.5. The specific exemption was increased from \$5,000 to \$10,000. The invested capital credit with respect to invested capital in excess of \$5,000,000, was revised as follows:

Invested Capital

	Rev. Act of 1941	Rev. Act of 1942	Rev. Act of 1943
	per cent.	per cent.	per cent.
First \$ 5,000,000.....	8	8	8
Next \$ 5,000,000.....	7	7	6
Next \$190,000,000.....	7	6	5
Over \$200,000,000.....	7	5	5

2. Relief Provisions

A number of extensions were made in the relief afforded coal and iron mines by the 1942 Act, to owners of gas, mineral and timber properties.

3. Estate and Gift Taxes.

No changes were made in the exemptions and rates of estate and gift taxes.

4. Excise Taxes

Liquor tax rates: distilled spirits, \$9 per proof gallon; still wines, not more than 14% alcohol: 15c per wine gallon; still wines, more than 14% and not over 21%: 60c per

wine gallon; still wines, more than 21% and not over 24%: \$2.00 per wine gallon; champagne, or sparkling wine, 15c per half pint; artificially carbonated wine, 10c per half pint; liqueurs, cordials, and the like, 10c per half pint; fermented malt liquors, \$8 per barrel.

Imported perfumes containing distilled spirits, \$9 per wine gallon.

Floor stocks taxes on distilled spirits, wines, and fermented malt liquors were imposed at rates equal to the tax rate increases on these commodities.

Tax on admissions increased to 1c for each 5c or major fraction thereof paid. Tax on permanent use or lease of boxes or seats in amusement places and the sale of tickets outside of box offices: 20%.

Cabaret tax, 30 per cent—Reduced to 20 per cent under the Public Debt Act of 1944, effective July 1, 1944.

Club dues, initiation fees: 20 per cent. Bowling alleys, \$20 per alley.

Pool halls, \$20 per table.

Furs, toilet preparations, electric light bulbs and tubes, and jewelry: 20 per cent.

Retailer's tax on luggage: 20 per cent.

Telephone, telegraph, radio and cable facilities: telephone conversations of a charge of more than 24c, domestic telegraph, cable or radio dispatches, leased wire, typewriters: 25 per cent; wire and equipment service: 8 per cent; local telephone service: 15 per cent.

Transportation of persons: 15 per cent.

These increased taxes are scheduled to end the first day of the first month which begins six months or more after the termination of hostilities in the present war.

5. Renegotiation of War Contracts.

The Act of 1942 created a joint War Contracts Price Adjustment Board. It exempted (a) contractors whose aggregate annual sales under war contracts were not in excess of \$500,000; (b) agricultural commodities up to the first stage where they have an established market; (c) contractors, exempted by the Federal income tax law; and (d) construction contractors awarded under competitive bidding.

Title VIII, "Repricing of War Contracts", gives the head of the department or agency contracting power to reprice any contract or sub-contract when excessive profits are being earned under it. The contractor, of course, has a cause of action through the

courts for appeal.

6. Postal Rates (See Postal Information elsewhere in the National Almanac.)

Individual Income Tax Act of 1944 Changes

1. The Individual Income Tax Law of 1944 broadened the scope of the simplified table method of tax computation (a) by raising the upper limit of the table from \$3000 to \$5000, (b) by extending its use to all types of income, and (c) by raising the standard allowance for deductions incor-

porated in the table from 6 to 10 per cent. Other provisions included:

2. A revised wage-bracket withholding table to increase the exactness of withholding (a) by narrowing the wage brackets, (b) by incorporating to 10 per cent standard deductions allowance, and (c) by graduating tax withholding to cover both the first and second brackets of surtax.

3. Persons with gross incomes of less than \$5,000 derived entirely from wages, interest, and dividends, and including not more than \$100 from sources not subject to withholding have the option of having collectors of internal revenue compute their tax.

4. Optional \$500 standard allowance for deductions for persons with gross incomes of \$5,000 or more.

5. Repeal of the Victory Tax for a new 3 percent normal tax on the net income of each person in excess of a flat exemption of \$500 (husband and wife filing joint return being allowed an exemption of \$500, plus an additional \$500 or the amount of the smaller of the two incomes, whichever is less.)

6. Combining levies previously known as

normal tax and surtax into a new surtax ranging from 20 percent on the first \$2000 of surtax net income to 91 percent on the portion of surtax net income over \$200,000.

7. Personal exemption for surtax purposes was changed to a uniform \$500 for the taxpayer, for his spouse, and for each dependent.

8. Dependent was defined as any closely related person for whom the taxpayer furnishes over half of the support, provided that such person does not receive an annual gross income of \$500 or more, and is a citizen of the United States or a resident of the United States or of a contiguous country.

9. Provided that declarations of estimated tax had to be filed whenever anticipated wages and salaries exceeded \$5,000 plus an additional \$500 for the taxpayer's spouse and dependents.

10. Changed date for filing final declaration and for payment of final installment of estimated tax for December 15 to January 15 of following year, with additional provision that on or before January 15 taxpayers may file final return in lieu of a declaration.

¹ Tax credit deductible from amount of tax rather than from net income. Sum in parenthesis expresses tax credit as income exemption on assumption that latter is always deducted from lowest income bracket. ² Tax credit deductible from amount of tax rather than from net income. Sum in parenthesis is the amount by which the first dependent raises the level at which a married person or head of family will first become taxable. ³ Exemptions shown are applicable to calendar years 1945-1946. Exemptions for calendar years 1943 and 1944 were \$2,000 and \$3,500. Permanent exemptions are: \$1,000 and \$2,500. ⁴ See state laws for specific application of exemptions.

IMMIGRATION AND NATURALIZATION

Source: Bureau of Immigration and Naturalization, Department of Justice

CLASSIFICATION OF IMMIGRANT ALIENS

Quota.....	Preference up to 50 per cent of quota.	1a. Parents, of American citizens 21 years of age or over, or husbands by marriages on or after July 1, 1932. Sec. 6(a)(1)(A). 1b. In quotas of 300 or over; skilled agriculturists, their wives and dependent children under 18 years of age. Sec. 6(a)(1)(B). 2. Wives and unmarried minor children of aliens lawfully admitted to the United States for permanent residence. Sec. 6(a)(2). 3. Remainder after (1) and (2) available for other quota immigrants. Sec. 6(a)(3).
	Remainder of quota	1. Wives, unmarried minor children, husbands by marriages before July 1, 1932, of American citizens. Sec. 4(a). 2. Aliens returning from temporary visit abroad. Sec. 4(b). 3. Aliens born in certain countries of the western hemisphere, their wives, and unmarried children under 18 years of age. Sec. 4(c). 4. Ministers, professors, their wives and unmarried children under 18 years of age. Sec. 4(d). 5. Students, at least 15 years of age. Sec. 4(e). 6. American women who have lost their citizenship. Sec. 4(f). 7. Immigrants who also have lost their citizenship.
Nonquota.....		1. American Indians born in Canada. Act of April 2, 1928. 2. Certain Spanish nationals returning to Puerto Rico. Act of May 26, 1926. 3. Aliens born in Puerto Rico or the Virgin Islands.
Other classes not subject to quota restrictions.		1. Aliens considered non-immigrants are (1) government officials, (2) temporary visitors, (3) aliens in transit, (4) alien seamen, (5) treaty aliens, (6) aliens entering from transit across foreign contiguous territory.

WHO MAY IMMIGRATE TO THE UNITED STATES

An "alien" is any person not a native-born or naturalized citizen of the United States, including the mainland and all water and territory subject to its jurisdiction except the Isthmian canal zone. Filipinos now are aliens.

A tax of \$8 is assessed on every alien entering the United States except children under 16 accompanied by a parent. It is not required of aliens who have been residing continuously for one year in Canada, Newfoundland, Cuba, or Mexico, who are coming for a temporary stay, nor to aliens in transit through the United States to foreign countries.

The following classes of aliens are excluded: (1) idiots, (2) imbeciles, (3) other feebleminded, (4) epileptics, (5) insane, (6) persons who have suffered attacks of insanity, (7) persons with constitutional psychopathic inferiority, (8) chronic alcoholics, (9) paupers or beggars, (10) persons with a loathsome or dangerous contagious disease,

(11) physical or mental defectives, (12) polygamists or persons who believe in polygamy, (13) former or present criminals, (14) anarchists or persons who advocate overthrow of the government, or assassination of public officials, (15) procurers or prostitutes, (16) persons induced to come by offers of employment, except certain restricted professional and artistic classes, (17) persons likely to become public charges, (18) Asiatics in general, (19) children under 16 unless accompanied by or destined for parents, (20) with some exceptions, all aliens over 16 who cannot read some language or dialect.

Severe penalties are provided for persons who assist immigrants to enter the United States in violation of these and other provisions of the immigration code, or for transportation companies who solicit immigrant passengers, or for companies which prepay transportation on promises to perform labor.

ENTERING THE UNITED STATES

Immigrants entering the United States must present unexpired passports or official documents in the nature of passports issued by the governments of the countries to which they owe allegiance, or other travel documents showing their origin and identity and valid immigration visas, quota or nonquota, in accordance with the requirements of the law, with certain exceptions.

Aliens ordinarily apply for immigration visas to the consul in whose district they reside, though they may apply outside their home districts if proof of admissibility is shown. Two forms are used, one for nonquota immigrants, another for quota immigrants. The visas are numbered.

Attached to the visas must be photographs, documents in duplicate which are copies of public records "kept by the government to which he owes allegiance," which are available. Included are police and prison records, if any, and if none, a certificate to that effect; military record, birth certificate, and so forth. Medical certificates must be

presented, if there is no medical officer of the public health service attached to the consulate. Visa cost is \$9 plus \$1 for clerical work.

An immigration visa is valid for a maximum period of four months. New visas may be applied for. Upon arrival and admission of the immigrant, the admitting immigration officer will endorse in the space provided on the immigration visa presented by the immigrant to show the details of entry. The visa is then forwarded to the Central office of this service and filed there. The passport presented by the immigrant with his immigration visa is always endorsed by the admitting officer to show the complete details of his admission. The passport is retained by the immigrant.

An alien's name may not be carried on a waiting list while he is in the United States. Names of quota immigrants are placed upon the waiting list only upon request of the alien or some other person authorized to act for him.

LEAVING THE UNITED STATES

An alien who has entered the United States lawfully and who desires to depart temporarily may obtain a permit to re-enter, valid for not more than one year, though it may be extended by the commissioner with good cause. Such permit relieves the immigrant of the necessity to obtain an immigration visa for the return journey to the United States, if return is made during the time specified in the permit.

No immigrant may be admitted to the United States unless he (1) has an unexpired

immigration visa or was born after the issuance of the immigration visa to his accompanying parent, (2) is of the nationality specified in such visa, (3) is a nonquota immigrant if specified as such in visa, and (4) is otherwise admissible under the immigration laws. Any person who enters in violation of these provisions may be deported. Any person who returns after he has been deported or ordered deported, is subject to a fine of \$1,000 and two years in prison.

MARRIAGE TO CITIZENS

An alien girl who comes to the United States to marry an American citizen, if possessed of the proper immigration visa and meeting other requirements, can proceed to her fiancé in the interior, but it is advisable for him to meet her.

Marriage of an alien woman to a citizen of the United States does not confer citizenship upon her, but she can enter as a nonquota immigrant. If she desires to accompany her husband to the United States, she should obtain a passport from her own government, and present this to the American consul with evidence of the marriage and of her husband's American citizenship. Personal affidavits will be accepted if her own govern-

ment refuses a passport. A nonquota immigration visa may be applied for after marriage. The woman will be subject to all other immigration requirements on arrival.

First and second class passengers are examined by immigration authorities aboard ship. If they fail to pass the necessary mental and physical requirements, they are sent to Ellis island or the immigrant station of point of entry, to be held for further examination. If they pass the examinations, however, they are allowed to land with few exceptions. Steerage or third class passengers are not examined on board ship, but are sent directly to the immigrant station at port of entry.

CERTIFICATE OF REGISTRY

Any alien eligible to citizenship who entered the United States prior to July 1, 1924, who has lived here continuously since such entry, who is of good moral character, who is not subject to deportation, can apply for

a record of registry if there is no immigration record of permanent admission for him. Such a record may be created in his behalf by the department of immigration and naturalization on his payment of a fee of \$10.

BORDER CROSSING CARDS

Aliens and citizens residing on either side of the international boundaries who habitually cross and recross the boundaries upon legitimate pursuits may apply to the immigration and naturalization service, at the

border port where last admitted, for a border-crossing identification card. These may be taken up or cancelled by the officer at his discretion.

DEPORTATION OF ALIENS

Within three years of entry, aliens may be deported for the following reasons:

1. If they entered by water at a time or place other than designated by immigration officials, or by land at any place not designated as a port of entry for aliens, or without inspection.

2. If they require public aid from causes arising subsequent to their entry if they wish to be removed to their native land.

3. If they are alien seamen landing in a port of the United States contrary to provisions of the act, who are brought before a board of inquiry and ordered deported. Such a board also may permit them to stay.

Aliens in the following situations may be deported at any time:

1. If found advocating unlawful destruction of the property or overthrow of the government of the United States, or assassination of officials.

2. If sentenced since May 1, 1917, more than once to a term of imprisonment of one year or more in this country, or upon conviction of crime involving moral turpitude committed any time after entry.

3. If they become public charges within five years of entry from causes "not affirmatively shown to have arisen subsequent to landing."

4. If hereafter sentenced to imprisonment for one year or more in this country, or upon conviction of crime involving moral turpitude committed within five years after entry.

5. If an inmate of a house of prostitution, or if connected with such a house, or if found practicing prostitution after entry, or if found receiving benefits from such a house or place where prostitutes gather, or if found attempting to import prostitutes.

6. If convicted or admitting the commission prior to entry of felony or other crime or misdemeanor involving moral turpitude.

7. If undesirable as defined by act of May 10, 1920.

8. If convicted of importing or bringing narcotic drugs into the United States after termination of imprisonment.

9. If the alien at any time is found to have been at the time of entry not entitled, under the Immigration Act of 1924, to enter the United States, or to have remained therein for a longer time than permitted under said act or later regulations.

Under the present interpretation of this act, an alien who entered the country illegally before July 1, 1924, cannot be deported if he has resided here continuously since such entry and has committed no act which under the law would make him deportable.

Any alien who entered illegally after July 1, 1924, is subject to arrest and deportation at any time.

Deserting seamen who entered illegally prior to July 1, 1924, also must be convicted twice of crime as above stated, but the alien

must remain in the United States. If he goes outside the limits of the country, he again must enter subject to the immigration laws.

Joining the army or navy will not legalize the standing of a person who entered this country illegally.

ALIENS INELIGIBLE TO CITIZENSHIP

The following classes of persons cannot be naturalized in the United States:

Persons belonging to the yellow race, such as Japanese and other Asiatics, including Hindus but excepting Chinese.

Persons who do not understand and cannot speak the English language.

Anarchists or other persons who do not believe in or are opposed to organized gov-

ernment, or who are members of or affiliated with any organization teaching the same.

Polygamists and persons who believe in the practice of polygamy.

Criminals and fugitives from justice.

Deserters and draft evaders who went abroad during the 2nd World War to escape such draft.

NATURALIZATION REQUIREMENTS AND PROCEDURE

Source: Immigration and Naturalization Service, Department of Justice

GENERAL INFORMATION

The naturalization laws apply to both men and women. They become citizens of the United States in the same way and under the same procedure. The words "he," "his," and "him" are used for convenience in this summary, but they refer to women as well as men.

Lawful Admission for Permanent Residence

An applicant for naturalization must have been lawfully admitted to the United States for permanent residence. A person who has

been admitted for temporary stay only—a visitor or a student, for instance—cannot become a citizen. Nor can a person who has entered the United States illegally, as a stowaway or deserting seaman or otherwise without examination, become a citizen.

Race

As a rule only persons belonging to the white race, the Negro race, the Chinese race, and the races that are natives of North and South America, such as American Indians and Eskimos, may, under the laws now in force, become citizens of the United States by naturalization.

DECLARATION OF INTENTION (The First Paper)

The first step toward becoming a citizen of the United States is to make a declaration of intention. The making of the declaration of intention is commonly called taking out

the first paper. Therefore, we shall refer to the declaration of intention as the first paper.

Who May Apply

1. An applicant for the first paper must be 18 years of age or older.

2. He may take out the first paper on the same day he arrives in this country as a legal permanent resident if he wants to. He cannot apply for his second paper until he has lived in the United States for a specified number of years but there is no such requirement in regard to the first paper.

3. He may apply for the first paper in any place he wants to. (He must apply for his second paper in a naturalization court in the district in which he lives.)

4. It does not matter if he cannot speak English when he applies for his first paper. Also, if he cannot write his name at that time, he may sign his first paper with a mark. He cannot become a citizen, however, until he can carry on an ordinary conversation in English (unless physically unable to talk) and sign his name in his own handwriting (unless physically unable to write).

How and Where to Apply

An applicant must use Form N-300 when he applies for the first paper. If he cannot get a copy of that form from a clerk of court, a teacher, or a social agency in the place where he lives, he can get it from the Immigration and Naturalization Office nearest his home. The form does not cost anything. After he has filled it out according to directions, he must take it, or mail it, to that same office of the Immigration and Naturalization Service together with three photographs of himself (see below).

The applicant must be sure to spell his name on Form N-300 exactly as it was spelled in his home country. If he does not do so, it will be hard to find the record of his admission to the United States and, therefore, hard to prove that he was legally admitted for permanent residence and is entitled to get a first paper.

Photographs Required

The three photographs that the applicant must enclose with his Form N-300 must be by 2 inches in size. They must have been taken within 30 days of the date of the application. They must have a light background, be unmounted, and not be retouched. They must show his head and shoulders only, front view, and without hat. He must write his name in the margin of each of these photographs; he must be careful not to write it so as to hide the face on the photograph. If he cannot write, he can make his mark on the margin of the photograph and have someone else write in his name. The directions in this section apply also to photographs needed in connection with other naturalization applications except the applicant must be able to sign his name on the photographs when he applies for his second paper.

Alien Registration Card and Immigrant Identification Card

The Law requires that every alien living in the United States be registered and have an alien registration card. Anyone who does not have such a card should at once take steps to get one. He can get information from the nearest Immigration and Naturalization Office. The alien registration number must be shown on Form N-300.

A person who was admitted to the United States as an immigrant on or after July 1, 1928, but before August 27, 1940, should also

have in his possession an "immigrant identification card"; that is, a small green card bearing his photograph, description, and certain other information.

Issuance of the First Paper

After the Government has found the record of the lawful admission of the applicant, a letter is sent to him telling him when and where he is to get his first paper. The clerk of the naturalization court fills out his first paper, the declaration of intention, using for this the information the applicant gave in his Form N-300. It is, therefore, very important that the information be correct. The applicant must sign the first paper with his name or his mark before the clerk of the court and swear that it contains the truth. If it is afterwards found out that an applicant has given wrong information on any important point, he may have serious trouble.

The applicant pays \$3 to the clerk of court for his declaration of intention. This fee of \$3 became effective September 28, 1944.

The first paper does not make an applicant a citizen of the United States, but it is important because it is proof of his lawful residence in the United States and it is the first step toward citizenship in this country. Likewise, many jobs are not open to aliens unless they have taken out a first paper. A first paper is good only for 7 years. If an alien has not applied for his second paper before the end of 7 years, he must take out another first paper.

Persons Not Required to Have a First Paper

Some persons may apply for their second paper without having taken out a first paper. Among them are the following:

1. The husband or wife of a citizen of the United States.

2. A young man or woman who is 21 years of age but not yet 22, who came to the United States before he or she was 16 years of age, and has lived here ever since.

3. A person who lived in the United States for at least the 5 years immediately before July 1, 1920, and who because of misinformation had reason to believe that he was a citizen of the United States and so exercised the rights of citizenship—voted, for instance—sometime before July 1, 1920.

4. A woman who lost citizenship in the United States through marriage to an alien before September 22, 1922, provided she has either lived in the United States ever since her marriage or else is no longer married to such alien.

5. A person who serves in time of war in the army or navy of the United States may become a citizen without having a first paper and so, under certain circumstances, may a person who serves in the army, navy, or merchant marine of the United States in time of peace. Further information on this point should be obtained from the nearest Immigration and Naturalization Office.

There are certain other persons who can become citizens without having taken out a first paper. They are less numerous than the five classes mentioned above. Because of lack of space, information about them cannot be furnished in this book but may be obtained from the nearest Immigration and Naturalization Office.

A Lost First or Second Paper

A person whose first paper or whose naturalization certificate has been lost or destroyed may apply for another copy of it, a duplicate it is called. He uses a special form when applying for such a duplicate,

Form N-565. He must enclose a post office money order for \$1 with his application (Form N-565). It must be made payable to the Commissioner of Immigration and Naturalization, Washington, D. C., but it must not be sent to Washington. Form N-565 and the money order should be taken or mailed to the Immigration and Naturalization Office.

Filing the petition for Naturalization— (Second paper)

The procedure for filing a petition for naturalization and becoming a citizen is frequently referred to as taking out the second paper. An alien who is required under the law to have a first paper may file his petition for naturalization as soon as his first paper is 2 years old, provided by that time he has lived in the United States continuously for 5 years. **The Government does not notify him that it is time to make his application.** He must be sure to apply for the second paper before his first paper is 7 years old. If the first paper is more than 7 years old, he will have to get another one and will once more have to wait 2 years before he is able to apply for his second paper.

Who May Apply for the Second Paper

1. The applicant must be 20 years of age or over.

2. He must be able to carry on an ordinary conversation in English and to sign his name (unless physically unable to talk or to write). Some naturalization courts require that an applicant for a second paper must be able to read English; the applicant should find out whether the court in his district has such a requirement.

3. He must have lived continuously in the United States for the number of years required by law; for aliens who are required to have a first paper, that is 5 years, and they must have lived at least the last 6 months of that 5-year period in the State where they apply for the second paper. For wives or husbands of citizens of the United States and some of the other aliens who do not need a first paper it means 1, 2, or 3 years, depending on the date of marriage or other facts of the case. Such persons should get further information on this point from the nearest Immigration and Naturalization Office.

4. He must be a person of good moral character. A man cannot become a citizen here if he is living with a woman who is not his lawful wife nor can a woman if she is living with a man who is not her lawful husband. A person who has a criminal record, especially a recent criminal record, may not be able to become a citizen of the United States.

5. He must be "attached to the principles of the Constitution of the United States and well disposed to the good order and happiness of the United States." To find out if he knows what those principles are, the applicant will be asked questions about the history and Government of the United States and about the Constitution. The Federal Government has textbooks on citizenship to assist applicants for naturalization in preparing to answer these questions. In many places the public schools conduct citizenship classes. These textbooks are furnished free for the use of applicants for naturalization who are attending such classes or who are studying under the supervision of public-school officials. A list of these books may be obtained by writing to the nearest Immigration and Naturalization Office. Persons who are not attending public-school

classes may purchase the books at a very small cost from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

How and Where to Apply for the Second Paper

1. Application for a second paper must be made in the district in which the applicant lives.

2. Application must be made on Form N-400. The form does not cost anything. If the applicant cannot get the form from a clerk of court, a teacher, or a social agency in the place where he lives, he can get it from the nearest Immigration and Naturalization Office.

3. The applicant must take or mail Form N-400, after it has been filled out, to the nearest Immigration and Naturalization Office. He must enclose with it three signed photographs of himself and his first paper unless he is among those who do not need a first paper.

Notification of Hearing and the Filing of the Petition

1. The applicant will be notified by the Immigration and Naturalization Office to which he sent his Form N-400, when and where he is to come for his first hearing.

2. The applicant must take two citizen witnesses along to this hearing.

3. A naturalization examiner questions them separately to make sure the applicant meets the requirements of the naturalization laws.

4. If the examiner is satisfied that the applicant does, he helps him file a petition for naturalization. At this time the applicant pays \$8 to the clerk of the court (the fee was changed from \$5 to \$8 on September 28, 1944). This pays for the petition and also for the certificate of naturalization, if or when such a certificate is issued to the applicant.

5. If the examiner believes the applicant is not qualified for citizenship he suggests that the petition not be filed.

Final Court Hearing

1. Not less than 30 days after the petition was filed, the applicant is notified to appear in the naturalization court for a final hearing to renounce allegiance to the foreign government of which he is a subject or citizen and to take an oath of allegiance to the United States.

2. In some State courts, the witnesses must also go with the applicant to this hearing, but in nearly all the Federal courts and many of the State courts they are needed only once; that is, for the first hearing. The applicant will be notified if he is to bring witnesses for the final hearing.

3. Most judges do not ask questions of the applicants at this court hearing; a naturalization examiner has already done so, and the judge usually follows the examiner's recommendation in regard to an applicant.

4. The examiner may recommend that an application for citizenship be granted, denied, or "continued" (that is, put off until the applicant is better prepared).

5. If the examiner recommends that the petition be denied, notice of this recommendation is sent to the applicant before the case is put on the court calendar for final hearing. The applicant is notified at the same time that he may ask to be examined by the judge in court if he feels that the examiner's recommendation is not just.

6. Where a large number of applicants are admitted to citizenship at a court session, they must not expect to get their certificates at once. They are usually asked to leave a

self-addressed, stamped envelope with the clerk of the court, and their certificates are sent to them by registered mail some time later.

Continuous Residence

The naturalization law requires an applicant for second paper to have lived continuously in the United States for a specified number of years; for most applicants this means 5 years.

Continuous residence does not mean that the applicant may not have been outside the United States during the required period of residence. If when leaving the United States he clearly intended to return, he may be absent as much as 6 months and, under certain circumstances, as much as a year. Absence of 1 year or more—even if it is only 1 day over a year—however, breaks the continuity of residence and makes it impossible for the applicant to get his second paper until 5 years (or 3 years or whatever other number of years are required in his case) after his return from that journey.

Under certain conditions permission may be obtained from the Immigration and Naturalization Service to be absent for a year or more without affecting the continuity of residence. The application for such approval must as a general rule be made in advance of the absence for which exemption is claimed.

The Witnesses

Every applicant for a second paper must bring two witnesses to his first hearing. In some courts, he must also bring two witnesses with him to the final or court hearing. He must bring the same two witnesses unless it is for some good reason impossible to do so and he gets permission to bring another witness or witnesses instead.

The witnesses must be persons of good moral character. They must be citizens of the United States and, if naturalized, bring with them proof of their citizenship. They must know the applicant well and must have seen him at least once a month. They are required to testify to his good moral character, his attachment to the principles of the Constitution of the United States, his residence in the United States, and other qualifications. If the applicant has lived in the same place during the entire period for which he must prove continuous residence, his witnesses must be persons who have known him for that entire period (5 years or whatever number of years are required in his case). If he has lived in two or more places during the required residence period, they must have known him ever since he arrived in his last place of residence. In that

case, he will be asked at his first hearing for the names and addresses of two citizen witnesses from each such other place of residence. These out-of-town witnesses do not have to go with the applicant to his hearing; they merely make a sworn statement before a naturalization examiner or other Government official in the place where they live, telling about his residence in that place and his conduct while there.

Legalizing Stay in the United States

There are foreign-born persons in the United States of whose legal admission to the United States there is no record or at least no record can be found. Such persons may have been brought here in childhood and never known just when or how they came; or they may have come here as visitors or as seamen and decided to stay; or they may have smuggled over the border, and so forth.

Since no proof of their legal admission for permanent residence can be found, they cannot become citizens of the United States until they have legalized their stay in this country. Anyone who can prove he came to the United States before July 1, 1924, has been here ever since, has shown himself to be of good moral character and is not subject to deportation can legalize his stay by getting a "record of registry." He uses Form N-105 when applying for a "record of registry"; he can get the form without cost, and also get information about the procedure he must follow from the nearest Immigration and Naturalization Office. An application for a record of registry costs \$18. The applicant must enclose a postal money order for that amount and three photographs with his Form N-105 when he takes it or mails it to the nearest Immigration and Naturalization Office. After he has such a record of registry, he can apply for citizenship.

Persons who came here illegally after July 1, 1924, cannot get a "record of registry" and they may be deportable. Some of them can, however, straighten out their difficulty through the so-called Canadian preexamination procedure. If such persons have a spouse, a minor child, or a parent in the United States who is dependent upon them for support, they may apply to the Attorney General to suspend their deportation and legalize their stay. They should get further advice and information from their teacher, a social agency, or the nearest Immigration and Naturalization Office on these procedures.

For further information consult the office of the Immigration and Naturalization Service.

HISTORY OF IMMIGRATION

From 1784 to 1794, immigration to the United States averaged fewer than 4,000 per year, and from 1794 to 1810 not more than 1,000. Beginning in 1817, after a cessation from 1810 to 1816 due to the War of 1812, immigration accelerated. Twenty thousand immigrants arrived in 1817 and led persons to believe that regulation was needed. The first law passed in 1819 related to the carriage of teenage passengers at sea, and became the basis of the first statistical information. Probably not more than 250,000 aliens entered the country between 1776 and 1820.

The total recorded immigration beginning 1820 to date is 38,461,305. The countries contributing the largest immigration during single year and decade were, in numerical order:

Greatest in Single Year

Austria-Hungary	338,452 in 1907
Russian Empire	291,040 in 1913
Italy	285,731 in 1907
Germany	250,630 in 1882
Ireland	221,253 in 1851
Canada and Newfoundland	200,690 in 1924
Great Britain	108,692 in 1888

Greatest in Single Decade

Austria-Hungary	2,145,266 in 1901-10
Italy	2,045,877 in 1901-10
Russia	1,597,306 in 1901-10
Germany	1,452,970 in 1881-90
Canada and Newfoundland	924,515 in 1921-30
Great Britain	807,357 in 1881-90

LEGAL DEFINITION OF UNITED STATES NATIONALS AND CITIZENS

Source: Immigration and Naturalization Service

Under the Act approved Oct. 14, 1940, effective January 13, 1941, the following persons are considered nationals and citizens of the United States at birth.

Sec. 201. The following shall be nationals and citizens of the United States at birth:

(a) A person born in the United States and subject to the jurisdiction thereof;

(b) A person born in the United States to a member of an Indian, Eskimo, Aleutian, or other aboriginal tribe; Provided, That the granting of citizenship under this subsection shall not in any manner impair or otherwise affect the right of such person to tribal or other property;

(c) A person born outside of the United States and its outlying possessions of parents both of whom are citizens of the United States and one of whom has resided in the United States or one of its outlying possessions prior to the birth of such person;

(d) A person born outside of the United States and its outlying possessions of parents one of whom is a citizen of the United States who resided in the United States or one of its outlying possessions prior to the birth of such person, and the other of whom is a national, but not a citizen of the United States.

(e) A person born in an outlying possession of the United States of parents one of whom is a citizen of the United States who resided in the United States or one of its outlying possessions prior to the birth of such person;

(f) A child of unknown parentage found in the United States until shown not to have been born in the United States;

(g) A person born outside the United States and its outlying possessions of parents one of whom is a citizen of the United States who prior to the birth of such person, has had ten years' residence in the United States or one of its outlying possessions, at least five of which were after attaining the age of sixteen years, the other being an alien; Provided, That, in order to retain such citizenship, the child must reside in the United States or its outlying possessions for a period or periods totaling five years between the ages of thirteen and twenty-one years: Provided further, That if the child has not taken up a residence in the United States or one of its outlying possessions by the time he reaches the age of sixteen years, or if he resides abroad for such a time that it becomes impossible for him to complete the five years' residence in the United States or its outlying possessions before reaching the age of twenty-one years, his American citizenship shall thereupon cease.

The preceding provisos shall not apply to a child born abroad whose American parent is at the time of the child's birth residing abroad solely or principally in the employment of the Government of the United States or a bona fide American educational, scientific, philanthropic, religious, commer-

cial, or financial organization having its principal office or place of business in the United States, or an international agency of an official character in which the United States participates, for which he receives a substantial compensation.

(h) The foregoing provisions of subsection (g) concerning retention of citizenship shall apply to a child born abroad subsequent to May 24, 1934.

Sec. 202. All persons born in Puerto Rico on or after April 11, 1899, subject to the jurisdiction of the United States, residing on the effective date of this Act in Puerto Rico or other territory over which the United States exercises rights of sovereignty and not citizens of the United States under any other Act, are hereby declared to be citizens of the United States.

Sec. 203. (a) Any person born in the Canal Zone on or after Feb. 26, 1904, and whether before or after the effective date of this Act, whose father or mother or both at the time of the birth of such person was or is a citizen of the United States, is declared to be a citizen of the United States.

(b) Any person born in the Republic of Panama on or after Feb. 26, 1904, and whether before or after the effective date of this Act, whose father or mother or both at the time of the birth of such person was or is a citizen of the United States employed by the Government of the United States or by the Panama Railroad Company, is declared to be a citizen of the United States.

Sec. 204. Unless otherwise provided in Section 201, the following shall be nationals, but not citizens of the United States at birth:

(a) A person born in an outlying possession of the United States of parents one of whom is a national, but not a citizen of the United States;

(b) A person born outside the United States and its outlying possessions of parents both of whom are and have resided in the United States or one of its outlying possessions prior to the birth of such person;

(c) A child of unknown parentage found in an outlying possession of the United States, until shown not to have been born in such outlying possession.

Sec. 205. The provisions of Section 201, subsections (c), (d), (e), and (g), and section 204 subsections (a) and (b), hereof apply, as of the date of birth, to a child born out of wedlock, provided the paternity is established during minority by legitimation or adjudication of a competent court.

In the absence of such legitimation or adjudication, the child, whether born before or after the effective date of this Act, if the mother had the nationality of the United States at the time of the child's birth, and had previously resided in the United States or one of its outlying possessions, shall be held to have acquired at birth her nationality status.

MINERAL PRODUCTION

Secretary of the Interior Ickes says that between January 1, 1940, and January 1, 1945, the United States mined some five billion tons of minerals and these included 3,061,060,000 tons of coal, 516,153,500 tons of iron ore, 2,278,000 tons of lead, 3,642,000

tons of zinc, 5,000,000 tons of copper, 14,169,000 tons of bauxite, 20,750 tons of tungsten, 112,000 tons of molybdenum, 17,118,000 tons of sulphur, 680,000 tons of salt, 3,155,000 tons of potassium, 1,000,000,000 tons of petroleum.

WORLD'S BIGGEST SKYSCRAPER

The world's tallest skyscraper is in the art of Moscow. The building is known as the Palace of the Soviets.

The main room of the structure, is a grand hall to seat 20,000 persons, designed for sessions of the Soviet congress. The building

rises more than 1,300 feet above the city, crowned by a statue of Lenin. New York's Empire State building is 102 stories and 1,248 feet tall.

The Palace of the Soviets is a memorial to the Bolshevik revolution.

THE TWENTIETH CENTURY FUND

330 West 42nd Street

New York 18, N. Y.

Evans Clark, Executive Director

The Twentieth Century Fund was founded in 1919 by the late Edward A. Filene as an endowed foundation for scientific research and public education on economic questions. Since 1937-1938 the entire income of the

Fund has been devoted to its own program of research and educational activities to help the American people solve some of their chief economic problems.

Figures of capital for the last nine years include advances of Dominion Government to Canadian National for operating expenses, interest charges and stock acquired by Dominion Government which at time of acquiring had relatively little value, also cost of constructing Government lines.

The single track mileage of the Canadian Pacific Railway (1942) was 17,034. The other principal railways are now, in pursuance of the government policy of nationalization, included in the Canadian National Railway System, which has a trackage (1942) of 21,770 miles.

TWENTIETH CENTURY FUND—Cont.

Since World War II began, a major part of the Fund's work has been concerned with problems of postwar reconstruction. Publications in this field include a summary of the plans of the United Nations, a study and discussion manual, a periodic directory of postwar planning organizations, and four popular reports in a series on "When the War Ends." Recent surveys have also been published on housing, labor relations, the power industry, and the cost of distributing goods.

Current research projects include a survey

of the estimated 1950-1960 needs and resources of the United States, a symposium of postwar fiscal and financial problems, a study of the foreign economic relations of the United States, and two related surveys, one on trends toward monopoly in domestic business, and the other on cartel arrangements in international trade.

The officers of the Fund are: John H. Fahey, President; Henry S. Dennison, Chairman, Executive Committee; Morris E. Leeds, Treasurer; Evans Clark, Executive Director; J. Frederic Dewhurst, Economist.

IMMIGRANTS TO AMERICA

The principal sources of immigration through 118 years from 1820 to 1937 were Germany, Italy, Ireland, Great Britain, Austria-Hungary, Russian Empire, Canada and Newfoundland, and Norway and Sweden.

The quota provisions of the act of May 19, 1921, limited for the first time immigration from the various countries to a fixed percentage of the number of nationals of such countries (other than in the Western hemisphere) already resident in the U. S. The present quota act of 1924, under the nation-

al-origins plan, takes into account the native-born as well as the immigrant population. More immigrants are admitted than allotted under quotas, because natives of countries in the Americas, husbands, wives, and unmarried children of U. S. citizens, ministers, professors, and certain other classes are all exempt from quota requirements.

Prior to 1932 immigration outnumbered emigration, but from 1932 to 1935 more alien residents left this country than newcomers arrived.

TO AND FROM THE U. S. A.

There was a period, not long ago, when the United States experienced more immigration than any country ever had before in its history. At its height it exceeded 1,000,000 a year, and for more than a century, the U. S. was the destination of emi-

grants of other lands. But in 1933, for every immigrant or newcomer admitted for permanent residence, three emigrants or alien residents of this country departed for permanent residence in some foreign country.

BOARD FEET MEASUREMENTS

To find the number of board feet in a piece of lumber one inch or less in thickness, multiply the length in feet by the width in feet. For lumber more than an inch in thickness, multiply the length in feet by the width in feet by the thickness in inches.

INSURANCE

NEW LIFE INSURANCE POLICIES IN 1945

Reporting the issuance in 1945 of new life insurance policies totaling \$15,300,000,000 Dave E. Satterfield, executive director of the Life Insurance Association of America, said the new coverage is the highest since 1931.

The figure, which does not include policies

revived or increased, exceeds the 1944 total by about 5 per cent.

"By the end of 1945, approximately 71,000,000 policyholders will have a total insurance coverage of about \$154,600,000,000," he said.

LIFE INSURANCE INCREASES 35 PCT. IN WAR

Life insurance policy holders in the United States now carry a record 154 billion 600 million dollars of insurance protection, an increase of 35 per cent or 40 billion dollars since the start of World War II, according to the Institute of Life Insurance.

The increase represents a gain of almost \$1,000 of protection for every family in the country, and boosts the family average to \$4,500. Insurance is now carried by 71 mil-

lion persons, an average of two to every family.

Benefit payments on life insurance policies in the war years amounted to about 15 billion 100 million dollars, the institute said. The 1945 total was 2 billion 680 million, of which 1 billion 300 million was death benefits, a record resulting primarily from war death claims.

New Mexico	113	Arkansas	99
Florida	111	West Virginia	99
Texas	109	South Dakota	98
Vermont	108	Oklahoma	98

at Pennsylvania State College.

Dr. Adams compiled the following statistics to show the number of unmarried men per hundred girls in each of the 48 states:

Indiana	98	New York	90
Georgia	98	Pennsylvania	90
Illinois	95	Tennessee	99
Minnesota	95	Nebraska	90
Delaware	94	Utah	89
Missouri	94	New Hampshire	89
Mississippi	94	Kansas	89
Maine	93	Connecticut	89
Alabama	93	South Carolina	88
Iowa	92	North Carolina	86
New Jersey	91	Massachusetts	83
Ohio	91	Rhode Island	83

INDUSTRY

Laws of Business and Industry

ESSENTIALS OF LAW

Contracts made on Sunday cannot be enforced.

All partners are responsible for the actions of any one partner.

No contract can be made legally with a

minor or feeble-minded person or one mentally deranged.

Principals are responsible for the actions of their agents.

It is a fraud to conceal a fraud.

SHERMAN AND CLAYTON ACTS

Approved July 2, 1890, the **Sherman act** was the pioneer attempt of the federal government to control monopolies and "trusts." It declares illegal "every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several states or with foreign nations."

Various penalties are provided for persons found guilty of entering into contracts or combinations of the character proscribed, the property involved is subject to confiscation, and persons injured by such unlawful acts are given the right to sue in federal courts and collect three-fold damages. Judicial interpretations of the law have alternately narrowed or expanded its scope.

The **Clayton act**, approved October 15, 1914, declares unlawful any attempt of persons engaged in commerce "to discriminate in price between different purchasers of commodities, which commodities are sold for use, consumption, or resale . . . (in any land) under the jurisdiction of the United States, where the effect of such discrimination may be to substantially lessen competition or tend to create a monopoly in any line of commerce."

The act makes allowances for price differences on account of differences in grade, quantity, or quality, or transportation costs.

Rebates or discounts which work to create price discriminations also are forbidden.

Sec. 3. "It shall be unlawful for any person engaged in commerce, in the course of such commerce, to lease or make a sale, or contract for sale of goods, wares, merchandise, machinery, supplies, or other commodities, whether patented or unpatented, for use, consumption or resale . . . (within U. S. territory) . . . or fix a price charged therefor, or discount from, or rebate upon such price, on the condition, agreement, or understanding that the lessee or purchaser thereof shall not use or deal in the goods, wares, merchandise, machinery, supplies, or other commodities of a competitor, or competitors of the lessor or seller, where the effect of such lease, sale, or contract for sale or such condition, agreement or understanding may be to substantially lessen competition or tend to create a monopoly in any line of commerce."

Persons injured by such illegal acts may sue in federal district courts to recover three-fold damages plus the cost of the suit, including a reasonable attorney's fee.

Labor unions and farmers' organizations run not for profit are exempt from provisions of the law. The law states that "the labor of a human being is not a commodity or article of commerce."

FEDERAL COMMUNICATIONS ACT

The Federal Communications act of 1934 established the Federal Communications commission for the purpose of regulating interstate and foreign commerce in communication by wire and radio. It does not apply to wire and radio communication or transmission in the Philippine islands or the Canal zone.

The commission is given the right to prevent or destroy monopoly of telegraph, telephone, or wireless communications or facilities. In a state of national emergency, the president is given authority to suspend or

amend the rules and regulations applicable to broadcasting stations.

In temporary emergencies, the commission may suspend its own rules. Distress signals from ships are given precedence. At the same time, the commission is enjoined expressly against censoring broadcast material or interfering with the right of free speech, except that obscene, indecent, or profane language is forbidden.

Licenses or managers of broadcast stations must give equal opportunities to all candidates for political office to speak, and are forbidden to censor the material broadcast.

SECURITIES ACTS

Securities Act of 1933: Requires filing with the Federal Trade commission of fullest possible information on new security issues sold in interstate commerce or through the mails, and forbids mailing of any security or prospectus which has not complied with FTC (now SEC) regulations.

Among the points of information required from those who issue securities are a statement of the general character of the business to be transacted, the capitalization of the issuer and number and classes of shares and the stated or assigned value thereof, price of the proposed issue, remuneration to officers and other persons exceeding \$25,000 a year, commissions paid to the underwriters,

names of holders of 10 per cent or more of prior security issues, a balance sheet not more than 90 days old showing all assets of the issuer and the cost, a profit and loss statement of the issuer showing earnings and income for the latest fiscal year and for the two preceding fiscal years, copies of material agreements made with underwriters, copies of material contracts, and a copy of underlying agreements or indentures affecting any stock, bonds, or debentures, offered or to be offered.

These requirements are slightly different for borrowing governments or political subdivisions, or for foreign securities. Penalties are carried for violation of this act.

Title II provides for establishment of a "Corporation of Foreign Bondholders," to act in the name and on behalf of the holders of foreign securities, and to serve and protect their rights and interests.

The Securities Exchange Act of 1934: Establishes a bipartisan Securities and Exchange commission of five members appointed by the president, with consent of the senate, to administer the act and also the Securities act of 1933.

Brokers, dealers, or exchanges are forbidden directly or indirectly, to use any means of interstate commerce, to transact in any exchange or to report an exchange in a security unless the exchange is registered or officially exempt from registration. Rules are laid out specifying requirements for registration, in effect putting the exchanges under the control of the SEC.

In purchasing securities, margins are required to be at least 55 per cent of the current market price of the security, or 100 per cent of the lowest market price of the security during the preceding 36 calendar months, but not more than 75 per cent of the current market price.

The Federal Reserve board can, in some instances, raise or lower the margin requirements. The right of court review is given to persons who wish to appeal SEC rulings to the federal circuit court of appeals.

Penalties provide for a fine of not more than \$10,000 or imprisonment for not more than two years, or both, for individual violators. Exchanges may be fined a maximum of \$500,000.

Primary aim of the law is to regulate exchanges and markets to prevent inequitable and unfair practices on such exchanges and markets. The law also amends several sections of the Securities act of 1933.

Public Utility Act of 1935: Aims to protect investors, consumers, and the general public from holding companies which exploit their subsidiaries, holding companies which follow policies that obstruct state regulation, and from practices involving lack of economy in management and operation, and absence of uniform standards.

Holding companies are required to register under the act before they can sell, transport, transmit, or distribute, or own or operate any utility assets for the transportation, transmission, or distribution of gas or electric energy in interstate commerce. They also are forbidden to use the mails to sell securities, or sell securities in any other form of interstate commerce, or to engage in any other business or activity in interstate commerce, or to own, control or vote any security of a subsidiary company unless they are registered with the SEC.

Registration requirements are laid out for the holding companies. After registering, the companies are regulated in regard to security transactions, acquiring new companies, and other transactions. The SEC is expected to make an attempt to simplify holding company structures. Reports must be made regularly, and careful records kept by the companies.

Penalties upon conviction of violating the law are a fine of not more than \$10,000 or imprisonment of not more than two years or both, and a fine of not exceeding \$200,000 against holding companies.

Amendment to Act of 1934: Trading in unlisted securities is permitted with certain safeguards for the investors. On application, the commission may give permission to trade in unlisted securities if it believes the action in accord with the public interest.

Unlisted trading privileges may be terminated by order after appropriate notice if the SEC believes such action to the public interest or necessary to protect investors. Such privileges shall not be terminated for a period of longer than 12 months.

Brokers and dealers are forbidden through interstate commerce to induce purchase or sale of securities except on a national securities exchange unless said broker or dealer is registered with the SEC by filing an application containing such information as the SEC shall require in the public interest or in the protection of investors. Such registration may be denied or withdrawn by the SEC.

UNITED STATES CUSTOMS COURT

Importers may petition to the United States Customs court for reappraisements on goods where they dispute the appraisal of the customs' official assessing ad valorem duty. Written protests must be filed within 60 days with the collector of customs at the port of entry, who thereupon forwards the papers to the court.

The parties in interest or their attorneys

and the assistant attorney general, may introduce evidence, hear and cross-examine witnesses, and inspect all samples and other evidence.

Procedure is much the same as before any other U. S. court. Appeals lie to the U. S. Court of Customs and Patent Appeals at Washington, and thence by a writ of certiorari to the U. S. Supreme court.

FEDERAL BANKRUPTCY LAWS

Corporate Reorganization Act: This act (77B), approved June 7, 1934, permits corporations to reorganize if the majority of creditors consent, and allows compromises in many instances where a minority might block such compromise. Three creditors, with total claims in excess of \$1,000 above securities held may petition to come under the act.

Unless bankruptcy proceedings are pending, an act of bankruptcy within the past four months must be proved in federal court.

A court order is binding upon the remaining one-third of each class of creditors if two-thirds of the creditors of each class approve it. All receive the same benefits.

A plan of reorganization need not be filed

with the petition, but may be suggested by the corporation later. Any other person interested in the reorganization may propose a plan with the approval of 25 per cent of each class of creditors and 10 per cent of all creditors. This requirement is modified to 10 per cent and 5 per cent, respectively, if the corporation is not insolvent.

The Bankruptcy Law of 1938 in effect only rewrote and reorganized the existing law. Sections 77B, 12 and 74 were in effect repealed and rewritten as chapters X, XI, and XII of the new Act.

Chapter X is the old section 77B, Chapter XI is a consolidation of old sections 12 and 74 and Chapter XII is a new subdivision covering the special case of individuals hav-

ing outstanding mortgage bond issues on which they are individually liable.

Chapter XIII provides for wage earners' compositions or extensions payable out of future earnings. Chapter X is a rearrangement of section 77B with some changes. The most important change is the new method of formulation and proposal of plans. In all cases where the indebtedness of the debtor is \$250,000 or more, the judge must appoint an independent trustee whose principal role is to investigate the debtor's affairs and to prepare a plan.

The judge also fixes a time within which the independent trustee must prepare and file a plan or a report of reasons why a plan cannot be effected. The result of these provisions is to shift the scene of bankruptcy negotiations; instead of being carried on outside court proceedings and being free of court control, they are made a part of the same cause with principal business in the hands of independent trustees and the Securities Exchange Commission. 1938 amendments were not intended to change the Act, but only to change procedure and establish a uniform system.

Frazier-Lemke Farm Mortgage act: Approved Aug. 28, 1935, this law was written to conform to the Supreme court's decision holding the first Frazier-Lemke act unconstitutional. Under the law, farmers who fail to receive relief in a composition or extension from creditors may ask to be adjudicated bankrupt.

At the same time, the farmer may petition the court that all his property, however encumbered, be appraised, and that his unencumbered exemptions and unencumbered interest or equity in his exemptions be set aside to him, and that he be allowed to retain possession of the remainder of his property under supervision of the court, under the provisions of the act.

If these conditions are fulfilled, the court shall stay all proceedings for three years, during which the time the debtor may retain possession of all or any part of his property, providing he pays a reasonable rental semi-annually. The rental is to go for taxes and upkeep, the remainder to be distributed among the creditors. The court may order sold any unexempt personal or perishable property at its discretion.

At the end of three years, or prior thereto, the debtor may redeem his property by paying the appraised value less the amount paid

on principal. Upon request of any secured creditor, the court shall order the property sold at public auction, where the debtor shall have 90 days to redeem it by paying the sale price plus 5 per cent interest. If the debtor fails to refinance himself, the court may order appointment of a trustee.

The act is declared to be an emergency measure, and if the court believes the emergency over in its locality, then the court may shorten the stay of proceedings and proceed to liquidate the estate.

Debtors Relief Act: Approved March 3, 1933, this act permits persons except corporations to petition for a composition or extension of time to pay their debts. It often is done by debtors before adjudication in an involuntary proceeding, and approval of the petition permits the debtor to escape the "stigma" of bankruptcy.

The court should make the stay conditional upon provisions for protecting the creditors against loss by the estate. The court may appoint a custodian or receiver to inventory the debtor's estate. Application to confirm the composition may be filed after written acceptance by a majority of debtors representing a majority in amount of claims.

The extension or composition must not reduce the amount of or impair the lien of any secured creditor, but shall only affect the time and method of its liquidation. The court may set aside the agreement if fraud is indicated.

Involuntary proceedings under the above plan, cannot be taken against a wage earner.

Farmers may proceed under the above plan or under Section 75 of the act which provides for appointment of referees to act as conciliation commissioners in counties where at least 15 farmers certify they intend to file petitions under the section. The procedure differs somewhat under Section 75, and fees of referees are fixed.

Reorganization of railroads engaged in interstate commerce is provided by Section 77.

Amendments to the act provide that no liquidation or adjudication shall be entered against a wage earner or a farmer without consent. Farmers are defined as individuals primarily bona fide personally engaged in producing products of the soil, including dairying, production of poultry or livestock or their products in an unmanufactured state, or the personal representative of a deceased farmer.

COPYRIGHT LAW

Copyrights are issued on (a) books, including cyclopedic works; (b) periodicals, including newspapers; (c) lectures, sermons, or addresses; (d) dramatic or dramatico-musical compositions; (e) musical compositions; (f) maps; (g) works of art; (h) reproductions of works of art including prints and labels used for articles of merchandise; (i) drawings or plastic works of a scientific or technical character; (j) photographs; (k) prints and pictorial illustrations; (l) motion picture photoplays, (m) other than photoplays.

Possession of a copyright gives the owner exclusive right for 28 years to print, reprint, publish, copy, or vend copyrighted materials in any form or medium, including delivery of speeches or performing of dramatic works. Copyrights may be renewed for an additional period of 28 years by the original owner or legal heirs.

Copyrights are not essential to publica-

tion, but provide a special protection to persons holding them. Without copyrights, however, the author or artist still has his rights under common law, and by retaining a copy of a manuscript and having two competent witnesses, an author is protected against having his work "stolen."

Copyrights may be registered by paying a fee of \$2 to the register of copyrights, library of Congress, from whom applications may be obtained. Forms also may be obtained from large postoffices. The application for registration of any work must specify to which of the classes (see paragraph 1) the work belongs. Copyright fee on commercial prints and labels is \$6.

To obtain copyrights on books, directories, pamphlets, cyclopedias, circulars, song words, poems, scenarios, cartoons, the work must first be printed with the copyright notice, and two complete copies should be sent with application form A 1, and the

copyright fee to the register of copyrights. Books by American authors must be accompanied by a sworn affidavit, asserting they were printed, bound, and set in the United States.

To escape the expense of having a story manuscript printed, submit the manuscript to a publisher, place the copyright notice on the face of it, and specify in an accompanying letter that copyright claim shall be printed with the article. When the publication is printed, send one complete copy of the complete publication, with copyright fee accompanied by application form A 5 to the register of copyrights.

Periodicals are copyrighted as books, but application form B 1 is used.

Lectures, sermons, and addresses may be written in longhand or typed and should bear the title. Application form C is used.

Copyrights on music and words, or music only, require that the works must be printed and published if they are to be sold. There are seven different application forms for these copyrights, depending on their class and whether the work is to be sold.

Musical compositions require application form E if reproduced for sale; E 1 if republished with new copyright matter; and E 2 if not reproduced for sale.

Dramatic compositions require application form D 1 if for sale; D 2 if not for sale; D 3 if combined with music and for sale; D 4 if combined with music and not for sale.

Maps require application form F with two copies; works of art, form G with a photograph or other identifying reproduction; reproductions of art works form H; scientific or technical drawings or plastic work two copies with application form I 1, and form I 2 if unpublished.

Copyright of photographs requires application form J 1 with two copies, and J 2 if

not to be sold; motion picture photoplays to be sold require a typewritten or printed description and two reels of film; if not to be sold, one scene from each act, with title description and prints must accompany form L 2.

Fees in many instances where reproductions are not for sale are only \$1 instead of \$2.

Copyright notices for books, periodicals, music, dramas, and motion pictures follow this form:

"Copyright," (year of publication, by (name of copyright owner).

Copyright notices for books should appear on the title page or the page immediately following. For periodicals it should appear on the title page or on the first page of text.

Since the United States does not belong to the International Copyright union, registration in the copyright office does not give protection in European countries. To obtain copyrights in those countries, the law and regulations of each country must be complied with. Requirements vary greatly, and copyright usually is obtained through a publisher or agent in those countries. Copyright conventions do exist between the United States and many countries, however.

If a valid copyright is obtained in one country belonging to the International Copyright union, such as Great Britain, copyright automatically is obtained in all other countries belonging to the union. British copyright may be obtained by first or simultaneously publishing the work in England. The British publisher will be expected to obtain British copyright.

Official permission is necessary to reproduce any copyrighted material, though there seldom are any damages assessed over reproducing small parts of a work—even when the matter is taken to court.

REGISTRATION OF

TRADE-MARKS

A trade-mark is a word, phrase or symbolic drawing or arrangement of lines used on articles or merchandise to identify their source. Trade-marks which have been used in this manner in interstate or foreign commerce may be registered in the trade-mark division of the patent office by the owners of such marks.

Registration is good for 20 years, and the trade-mark must be renewed each 20 years. Each registration or renewal costs \$15.

The trade-mark division will not itself investigate in advance to determine whether a given mark is owned by some one else, but its files are open for inspection.

No trade-mark will be registered unless it is in actual use in commerce. It cannot consist of or comprise immoral or scandalous matter; or contain the flag or coat of arms or other insignia of the United States, or of any state or municipality or foreign nation, or fraternal society, or bear a marked resemblance thereto, unless prior use can be proved. Names of varieties of seeds and plants cannot be registered.

Trade-marks similar to others already in use will not be registered. Marks must not be merely words or devices which are descriptive of the goods with which they are used, or merely a geographical name or term. Portraits of a living individual must not be used in a trade-mark except with his consent in writing.

Full information on what forms to use in application may be obtained from the trade-mark division, patent office, Washington,

D. C. Requirements are rather technical, and color charts must be used by draftsmen who make the drawing of the marks on specified sizes of paper. The office, at the request of applicants, will furnish the drawings at cost.

Ownership of trade-marks is not conferred by registration because the first person to use the mark on merchandise acquires legal title. Nor are trade-mark rights lost by failure to obtain the necessary registration.

Trade-mark privileges will be accorded to residents of foreign countries if these countries afford the same privileges to the United States. The mark must first be registered in the foreign country in which its owner resides, and a certified copy of the registration must be filed with application.

Trade-marks may be registered with the International bureau at Habana by the commissioner of patents on request of the owner of the mark, accompanied by a fee of \$5, and an international money order for \$50 to the order of "Director of International Bureau, Habana." Application for registration with the International bureau also should be accompanied by an electrotype of the trade-mark not larger than 10 centimeters in either dimension; 30 copies of the mark printed on paper if the U. S. registration should claim color as a distinctive element; name and address of the owner of the mark; number and date of its registration with the patent office, and a translation into Spanish of the particular description of goods as stated in the certificate of registration.

THE LAW OF PATENTS

A patent gives the inventor exclusive right to make, use, or sell his invention for the term of 17 years. It does not give the patentee such right, however, if the patent is an improvement on some unexpired patent whose claims are thus infringed. The patent office, in its investigation preceding issue of a patent, does not consider whether the invention infringes prior patents.

To obtain a patent there must be a regularly filed application, with a complete description of the invention accompanied by drawings illustrating it if it can be illustrated. The description must be complete enough to indicate that the device can be operated and manufactured.

More than 2,000,000 patents covering almost every possible line of mechanical endeavor have been issued in the United States, and the patent office therefore advises that a search be made to make certain that the device is not covered by some prior patent.

The patent office cannot give information on the usefulness or novelty of an invention, nor make any searches except on an officially filed application, accompanied by a fee. The patent office also will not give legal advice except as a part of the procedure in a formally filed application.

The patent office insists that the inventor himself make be authority on his making an application. It will give him no advice on the matter, but its records are open for inspection.

Application for patent must be made by the inventor only. No person who has not actually created a portion of the invention is entitled to be considered a joint inventor. Persons who contribute financial aid are not joint inventors but the invention may be assigned to them.

Patents are not granted for useless devices, printed matter, for methods of doing business, improvements in devices which are the result of mechanical skill only, nor for machines that will not work. Nor are patents granted for any formulas or "compositions of matter" unless the ingredients and manner making are fully disclosed in the application.

The patent law gives the inventor no protection until the patent is issued. Terms such as "patent pending" have no effect in law. In order to protect himself, an inventor should keep careful records of his inventions and improvements, and have two witnesses he can trust and whose testimony would be

competent in a court of law. If the invention is stolen under such circumstances the inventor will have evidence in attempting to recover damages.

Once a patent has been issued, it is out of the jurisdiction of the patent office, which is not concerned with questions of infringement, the scope of the patent, or any other questions arising out of the grant. These matters are subject to jurisdiction of the United States district courts. Patent protection extends through U. S. possessions on compliance with certain regulations.

If two patents for the same device are applied for, a hearing, called an interference, is held to find who has the prior claim. If a patent claim is rejected, appeals may be taken to the board of appeals and finally to the U. S. Court of Customs and Patent Appeals.

All business with the patent office should be conducted by correspondence. All letters should be addressed to the commissioner of patents. Separate letters should be written for each subject of inquiry. The number of a patent in question always should be given. Members of Congress are forbidden to examine or act in patent cases.

The patent office advises the applicant, unless he is familiar with such matters, to employ a competent patent attorney, since the value of patents depends largely upon the skillful preparation of the specification and claims. The office cannot aid in selecting an attorney, but advises that the applicant see that he is registered with the patent office.

Applications for patents must be made to the commissioner of patents and signed by the inventor or legal representative of his estate. A complete application comprises the first fee of \$30, and \$1 for each claim in excess of 20, a petition, specification, and oath; and drawings when required. All these must be sent to the commissioner. Papers must be written or printed in the English language and in permanent ink. In certain instances, a model will be required.

Blank applications are not supplied, but forms may be obtained from the patent office by asking for the pamphlet containing the forms.

If the patent is granted, a final fee of \$30 and \$1 for each claim in excess of 20 must be paid. If not granted, the applicant will receive written notice of reasons.

THE NORRIS-LAGUARDIA ANTI-INJUNCTION ACT OF MARCH 23, 1932

The Norris-LaGuardia Act, Public Law 65, was legislated for labor, and set forth its rights under injunctive proceedings.

No United States court shall have the jurisdiction to issue any restraining order or temporary or permanent injunction in a case involving or growing out of a labor dispute.

Section 2 is a declaration of United States policy toward labor, which, briefly, is that labor has a right to organize and to bargain collectively, that laborers shall be free from interference, restraint or coercion by employers.

Promises—that is, employer-employee agreements in contracts for hire—which are contrary to the stated policy are not enforceable in United States courts e.g., agreements to withdraw one's membership in labor, etc., organizations during employ-

ment, and agreements inhibiting one's joining a labor union, etc., organization.

Section 4 lists certain conditions under which no court in the United States can issue restraints or injunctions to prohibit any person or persons from participating in a labor dispute. These conditions are as follows:

1. Refusal to continue employment relation.
2. Retention of organization affiliations.
3. Paying, or giving to, or withholding from, unemployment, strike, etc., benefits or insurance.
4. Aiding disputants during pendency of suit.
5. Giving publicity to disputed facts.
6. Peaceably assembling.
7. Communicating intentions to do certain acts.

8. Agreements for concerted acts.

9. Urging others to join.

Concerted acts of labor unions are not regarded as an unlawful combination. Organization officers are not liable for acts of individual members.

Injunctions can be issued, however, when unlawful acts are threatened, when substantial and irreparable damage to one's

property will follow if these acts are done, and when greater injury will be inflicted upon complainant by denial of relief than will be inflicted upon defendants by the granting of relief, when complainant has no adequate remedy at law and when the complainant (in these cases, the employer who seeks injunction is the complainant) has or is given inadequate protection.

¹ The figures include data for establishments with products valued at \$500 to \$5,000. Such data are not included in the figures for 1929 and 1939.² This figure differs from the grand total shown in other tables, for the reason that data for proprietors and firm members (which were not reported by sex) are here included. ³ Data incomplete. ⁴ No data. ⁵ Includes data for 159,885 children under 16, not distributed by sex. ⁶ Includes data for 161,276 children under 16, not distributed by sex. ⁷ Not including data for children under 16. See footnote (5). ⁸ Not including data for children under 16. See footnote (5).⁹ The 1939 questionnaire, for the first time, called for data on the total number of employees in manufacturing establishments, including those engaged wholly or chiefly in distribution, construction, and other nonmanufacturing activities. It is not known to what extent data for such employees were included in the figures reported for earlier years. This table presents detailed figures for employees receiving pay at any time within the normal pay-roll period ended nearest Oct. 14, 1939, and for such employees on the pay-roll on Dec. 14, 1929, or on the nearest representative date; for 1919, 1914, and 1909 the date was Dec. 15, and for earlier years an average was used. The total for "Wage earners engaged in manufacturing" is not identical with the average for the year and differs from the number reported for October 1939 or for December 1929, because for both years some manufacturers gave wage-earner figures for months other than those specified. For years prior to 1929, the total number of wage earners is the average for the year.

Home Owners Loan Corporation—

This emergency agency, administered by the Federal Home Loan Bank board, ceased operation in 1936 as provided by its empowering act of June 13, 1933. Since that year the agency has been engaged in liquidating its loans and assets. During its existence, the H.O.L.C. granted loans totaling \$3,487,656,260 to 1,017,821 home owners facing foreclosures. Loans were written for 15 years at five per cent interest. On June 30, 1944, the agency was collecting on 641,446 accounts. On this date, \$2,231,486,960 of the agency's loans had been liquidated.

Federal Housing Administration—

This agency, created June 27, 1934, insures

private lending institutions against loan losses secured by mortgages. Subsequent Congressional changes in the agency have increased its activities.

Insurance may not exceed 80 per cent of the appraised value of property nor be greater than \$16,000. An annual interest rate of 4.5 percent is now accepted on loans.

Federal Savings and Loan Insurance Corporation—

Created by the National Housing Act of June 27, 1934, the agency insures the safety of savings in thrift and home financing institutions. The unit is capitalized at \$100,000,000. Accounts up to \$5,000 are accepted for insurance.

ANNUAL ENERGY SUPPLY OF THE UNITED STATES

(Source: U. S. Bureau of Mines)

NOTE.—The figures, except coal equivalent, represent the equivalent of the heating power of the classes of fuel in trillions of British thermal units. Data represent production, except those for oil imports, and take no account of exports of imports, or changes in stocks.

Annual average or year	Anthracite ¹	Bituminous	Total coal	Domestic oil ¹	Natural gas	Imported oil	Water power ²	Grand total fuels and water power	Equivalent in bituminous coal ³	
									Million tons of 2,000 lbs.	Per capita, tons

1942.....	1,631	15,196	16,827	8,313	3,171	*	3,474	31,785	1,213	9.1

¹ Not including bootleg or stolen coal, estimated at about 4,000,000 net tons in 1935; if this were included the total energy from anthracite in 1935 would be 1,496 trillion British thermal units.

² The fuel equivalent for water power is calculated from the reported horsepower of installed water wheels. Prior to 1890 data were unsatisfactory, but estimates are included in the total.

³ Calculated at 26,200,000 British thermal units per ton.

⁴ Based on the amount of coal displaced by gas, as estimated by the gas companies.

⁵ Preliminary.

* Figures not available for publication.

COAL RESERVES OF CANADA

It is claimed that Canada possesses approximately one-sixth of the world's known coal reserves, 85 per cent of which are located in the province of Alberta.

FIRST RADIO BROADCAST

The first attempts at broadcasting music were made as early as 1916, but the first station to go on the air with a program using voice was KDKA, East Pittsburgh, Pa., on Nov. 2, 1920, when election returns were broadcast.

SELECTION OF POSTAGE STAMP DESIGNS OF THE UNITED STATES

The successive issues of postage stamps of the United States since July 1, 1894, have been designed by the Bureau of Engraving and Printing and submitted to the Postmaster General for approval. In the case of special issue stamps, sponsors of such issues are generally invited to sit in with government officials and offer suggestions that the

special stamps may fittingly portray the occasion to be commemorated.

A careful study is made of the proposals and the photographs and records submitted. Material in the Library of Congress is consulted, to the end that the design may combine artistry with historic accuracy.

1920	48,578,717	1928	93,262,399	1936	56,683,828		

NOTE: Does not include value of parts shipped for assembly abroad because export declarations do not segregate parts for trucks from parts for passenger cars. For this reason, this data is not comparable with tables showing number of motor trucks exported.

¹Excludes shipments to non-contiguous territories.

MINERALS

STATES AND THEIR PRINCIPAL MINERAL PRODUCTS IN 1943¹

Source: Minerals Yearbook, 1944

State	Rank	Percent of value United States	Principal mineral products in order of value
Alabama	16	1.55	Coal, iron ore, cement, stone.
Alaska	38	.14	Gold, sand and gravel, coal, platinum metals.
Arizona	14	1.89	Copper, gold, zinc, silver.
Arkansas	22	1.23	Bauxite, petroleum, coal, natural gas.
California	3	8.57	Petroleum, natural gas, natural gasoline, cement.
Colorado	18	1.34	Molybdenum, coal, zinc, gold.
Connecticut	43	.07	Magnesium, stone, clay products, sand and gravel.
Delaware	49	.01	Clay products, sand and gravel, stone, raw clay.
District of Columbia	50	(²)	Clay products.
Florida	30	.38	Phosphate rock, stone, cement, sand and gravel.
Georgia	34	.32	Raw clay, stone, cement, clay products.
Idaho	26	.87	Zinc, lead, silver, tungsten ore.
Illinois	5	4.88	Coal, petroleum, stone, sand and gravel.
Indiana	21	1.27	Coal, cement, petroleum, stone.
Iowa	31	.37	Coal, cement, stone, clay products.
Kansas	9	3.34	Petroleum, natural gas, zinc, coal.
Kentucky	8	3.59	Coal, natural gas, petroleum, stone.
Louisiana	6	4.08	Petroleum, natural gas, natural gasoline, sulfur.
Maine	46	.04	Sand and gravel, cement, stone, slate.
Maryland	36	.26	Coal, sand and gravel, cement, stone.
Massachusetts	42	.08	Stone, sand and gravel, lime, clay products.
Michigan	13	2.38	Iron ore, petroleum, salt, natural gas.
Minnesota	11	2.69	Iron ore, manganese ore, sand and gravel, stone.
Mississippi	33	.32	Petroleum, sand and gravel, clay products, raw clay.
Missouri	23	1.09	Lead, coal, cement, zinc.
Montana	17	1.39	Copper, petroleum, coal, zinc.
Nebraska	40	.10	Cement, sand and gravel, stone, petroleum.
Nevada	27	.86	Copper, magnesium, gold, tungsten ore.
New Hampshire	47	.02	Mica, feldspar, clay products, stone.
New Jersey	29	.57	Zinc, sand and gravel, clay products, stone.
New Mexico	15	1.88	Petroleum, potassium salts, copper, natural gas.
New York	19	1.34	Petroleum, iron ore, zinc, salt.
North Carolina	32	.34	Bromine, stone, clay products, mica.
North Dakota	45	.07	Coal, sand and gravel, natural gas, clay products.
Ohio	10	2.87	Coal, natural gas, stone, clay products.
Oklahoma	7	3.86	Petroleum, natural gas, zinc, natural gasoline.
Oregon	37	.19	Sand and gravel, cement, stone, mercury.
Pennsylvania	2	13.47	Coal, petroleum, natural gas, cement.
Rhode Island	48	.01	Stone, sand and gravel, graphite, clay products.
South Carolina	44	.07	Stone, clay products, raw clay, sand and gravel.
South Dakota	39	.13	Gold, stone, raw clay, cement.
Tennessee	25	.98	Coal, stone, zinc, cement.
Texas	1	16.72	Petroleum, natural gas, natural gasoline, sulfur.
Utah	12	2.49	Copper, coal, gold, zinc.
Vermont	41	.10	Stone, slate, talc, lime.
Virginia	20	1.30	Coal, stone, sand and gravel, zinc.
Washington	28	.57	Cement, sand and gravel, coal, magnesite.
West Virginia	4	8.55	Coal, natural gas, petroleum, natural gasoline.
Wisconsin	35	.29	Stone, iron ore, zinc, sand and gravel.
Wyoming	24	1.07	Petroleum, coal, natural gas, iron ore.

¹ In this table iron ore, not pig iron, is taken as the basis of iron valuation, and for other metals mine production (recoverable content of metals) is the basis. Compilation of rank for 1944 not yet available.

² Less than 0.01 percent.

¹ In this table iron ore, not pig iron, is taken as the basis of iron valuation, and for other metals mine production (recoverable content of metals) is the basis. Comparable totals for years before 1911 not available.

WEIGHING DIAMONDS

The weight of diamonds and other precious stones is expressed in metric carats. The unit is the international carat of 200 milligrams, which has been officially adopted by the United States and most of the countries in Europe. Until July 1, 1913, there were three different standards in use in the United States, although the one generally accepted was 205.3 milligrams. This was usually subdivided on the binary system, the smallest subdivision being $\frac{1}{4}$ of the carat. The new carat is subdivided on the decimal system.

Old carats in new metric carats:

Old carat	New metric	Old carat	New metric	Old carat	New metric
$\frac{1}{4}$	0.02	$\frac{1}{8}$	0.13	1	1.03
$\frac{1}{2}$	0.03	$\frac{1}{4}$	0.26	2	2.05
$\frac{3}{4}$	0.06	$\frac{1}{2}$	0.51	3	3.08

Old carat	New metric	Old carat	New metric	Old carat	New metric
4	4.11	10	10.26	200	205.30
5	5.13	25	25.66	300	307.95
6	6.16	50	51.32	400	410.60
7	7.19	75	76.99	500	513.25
8	8.21	100	102.65	1,000	1,026.50
9	9.24				

Metric carats in old carats:

New carat	Old carat	New carat	Old carat	New carat	Old carat
1	$\frac{1}{4}$	8	$\frac{7}{16}$	75	$\frac{75}{16}$
2	$\frac{1}{2}$	9	$\frac{9}{16}$	100	$\frac{97}{16}$
3	$\frac{3}{4}$	10	$\frac{97}{16}$	200	$\frac{194}{16}$
4	$\frac{3}{4}$	15	$\frac{149}{16}$	300	$\frac{292}{16}$
5	$\frac{5}{8}$	20	$\frac{193}{16}$	400	$\frac{389}{16}$
6	$\frac{5}{8}$	25	$\frac{243}{16}$	500	$\frac{487}{16}$
7	$\frac{6}{8}$	50	$\frac{485}{16}$	1,000	$\frac{974}{16}$

¹ Coal is also mined in Argentina, Iran, and Italian East Africa, but production figures of those countries not available.

² Estimate included in total.

³ Data not yet available.

⁴ Estimate.

⁵ Fiscal year ended March 31 of year following that stated.

⁶ Estimated production of Slovakia only.

⁷ Estimated production of Ruhr only.

⁸ Production less than 1,000 tons.

⁹ Estimated production of Croatia only.

¹⁰ January to June, inclusive.

¹¹ Production of Government mines only.

¹² Tonnage raised by Wankie colliery for year ended August 31 of year stated.

BITUMINOUS COAL AND LIGNITE MINING INDUSTRY IN THE UNITED STATES, 1902-1943

CEMENT PRODUCTION BY YEARS

Source: Bureau of Mines, Department of Interior

Note—Portland cement is expressed in barrels of 376 pounds; masonry, natural, and puzzolan cement in 1921 and later years in 376-pound barrels but prior to 1921 in barrels of 240, 265, and 320 pounds, respectively. For 1912 through 1924 the figures for masonry, natural, and puzzolan cement represents shipments.

Note: Table above includes military trucks as follows:

1936.....	2,725	1939.....	6,188	1942.....	672,181†
1937.....	1,703	1940.....	55,389	1943.....	672,614
1938.....	2,248	1941.....	218,880	1944.....	624,669

* Includes federal excise taxes and standard equipment.

† A substantial part of the trucks reported comprises chassis only, without body; hence the value of bodies for these chassis is not included. Buses, station wagons, fire apparatus, street sweepers and other special purpose vehicles are included. 1942, 1943 and 1944 values are estimates.

‡ Includes 548 military integral type buses.

¹Registration periods ending not earlier than November 30 and not later than January 31 are considered calendar-year periods. In those states where the registration period is definitely removed from the calendar year, registration figures were obtained for the calendar-year period.

²The bus figures given represent commercial busses in most cases, although in some states privately-owned school busses are included. For states which did not segregate busses from other vehicles, the segregation of busses from other motor vehicles has, where possible, been approximated from other data available.

³Federal vehicles with no fixed domicile have been assigned to states in proportion to those reported by states.

⁴For states which did not segregate state, county, and municipal motor vehicles from private and commercial motor vehicles, segregation has been approximated from other data available.

TEN BEST WESTERN MOVIE STARS FOR 1944

Roy Rogers

TRAFFIC ACCIDENTS INCREASE

Deaths from motor vehicle traffic accidents totaled 8,150 in the first six months of 1945, according to the Bureau of the Census, U. S. Department of Commerce. This is an increase of 6 percent over the 7,708 deaths in the first 6 months of 1944. Fatalities from nontraffic motor-vehicle accidents from January to June, 1945, numbered 273, or 20 per cent less than for the same period of 1944. Nontraffic accidents are those not occurring on public property.

The Census Bureau figures are compiled from special reports made cooperatively by the vital statistics offices and traffic authorities of 42 States, the District of Columbia, and New York City. It is estimated that the number of motor-vehicle accident fatalities occurring in the reporting area represents approximately 80 per cent of the annual

motor-vehicle deaths in the United States.

Three-fifths (61 per cent) of the fatal traffic accidents occurred in rural areas and urban places of 2,500 to 10,000 population.

The increase in fatalities appears to have resulted from accidents occurring in urban places of 10,000 or more population. There were 3,026 fatalities from traffic accidents in such urban places in the period January to June 1945 as contrasted with 2,541 in the corresponding period of 1944, an increase of 19 per cent. On the other hand, there were 3 per cent fewer fatalities from accidents occurring in rural areas and urban places of 2,500 to 10,000 in the first 6 months of 1945 than in 1944; the provisional numbers of fatalities for January to June, 1944 and 1945 were 4,709 and 4,589, respectively.

¹ Receipts for registration periods ending not earlier than November 30 and not later than January 31 are considered calendar-year receipts. In those states where the registration period is definitely removed from the calendar year, registration receipts were obtained for the calendar-year period.

² Special title taxes imposed under general sales tax levies are not included.

³ In many states county or local officers are allowed service charges for issuing registrations, operators licenses, etc. In the majority of cases these charges are included in registration and other fees. The amounts shown in this column are estimates of service charges collected and retained by local officials and not reported elsewhere in the table.

⁴ Fees charged for the privilege of transporting vehicles to be sold are usually termed caravan fees, but are also known as in-transit licenses, towing fees, and special licenses.

⁵ Registration fees include proceeds of state "Vehicle License Fees," \$14,238,000, imposed in addition to the regular registration fees of \$13,497,000.

⁶ Bus fees included with those of trucks. ⁷ Bus fees included with those of automobiles.

⁸ Trailers of 1,000 pounds capacity or more prohibited on highways, although permitted in cities under city licenses. Tractor-semitrailers registered as trucks. Light trailers permitted but not registered.

⁹ Includes fees of commercial full trailers.

¹⁰ Fees of light trailers and commercial semitrailers only. Fees of commercial full trailers included with trucks.

¹¹ Taxicab and bus fees included with those of trucks.

¹² Intra-city and privately-owned school bus fees included with passenger cars.

¹³ Bus and trailer fees included with those of trucks.

¹⁴ Trailer fees included with those of trucks.

¹⁵ Trailers are not registered in Tennessee.

¹⁶ Additional fees on increased capacities were classified as reregistration fees in 1943, but as "other receipts" in 1944.

¹⁷ Fees of trucks under 1,500 pounds capacity included with those of passenger cars.

ILLINOIS' SALES TAX COLLECTION AT PEAK IN 1945

Illinois last year collected \$95,506,000 thru the retailers' occupational (sales) tax, the second highest total on record and 6 per cent more than in 1944, the department of revenue said yesterday. The figure was exceeded in 1941.

Motor fuel tax collections last year rose

10 per cent above 1944 levels to \$31,793,000, the increase reflecting three and one-half months of nonrationing. Cigaret tax revenues rose to \$12,201,000 from \$11,844,000, liquor tax collections 2 per cent to \$22,533,000, and public utility taxes 5 per cent to \$12,618,000, up 5 per cent.

¹ State data for 1936 and 1941 are for calendar years; prior to 1936, as reported by individual states. County and local data are for varying fiscal years, as reported.

² Includes expenditures by states on trans-city connections of state highways; also includes expenditures for state highway police.

³ Interest payments as reported in state highway finance tables have been reduced by amounts paid to counties on reimbursement obligations, in order to avoid duplication.

⁴ Expenditures for forest, park, and Indian reservation roads. Data are for calendar years.

LOAVES OF BREAD FROM BARREL OF FLOUR

One barrel of flour is considered sufficient for an average of 270 one-pound loaves of bread. About four and six-tenths bushels of wheat are used in milling the grain into flour, but patent flours require one-fifth more wheat for a barrel, by millers' estimates.

MILEAGE OF RURAL ROADS IN THE UNITED STATES AT THE END OF 1942¹

Note: Totals include "other State Roads" and "State Aid Roads" and therefore will not in all cases equal the sum of figures shown.

¹ This table compiled for latest available year from reports of state authorities and from planning survey data. State highway mileage compiled from state reports for calendar year 1942. Other state, local and federal mileages compiled from state and planning survey reports for calendar year 1942 except as follows: Arkansas, 1941; Kansas, 1941; Louisiana, 1939; Maine, 1938; Maryland, 1941; Massachusetts, 1940; Minnesota, 1941; Nebraska, 1941; New Hampshire, 1939; New Jersey, 1940; Pennsylvania, 1940; Utah, 1941; Virginia, 1941; Washington, 1941; and West Virginia, 1939. ² Mileages shown are in addition to those forming a part of state highway systems or included with county and local road mileages reported. ³ Includes some unsegregated urban mileage. ⁴ Estimated by state authorities. ⁵ In Delaware, North Carolina, Virginia (all but 3 counties), and West Virginia, the former county roads are under state control. ⁶ The segregation of urban mileage is incomplete. ⁷ Includes 9,659 miles designated as farm-to-market system. ⁸ State-aid system. ⁹ Federal-aid secondary and state-aid systems. ¹⁰ State forest, park, and institutional roads. State Aid Roads: Illinois 18,191 miles; Minnesota 14,605; Vermont 2,509.

MOTION PICTURES

MOTION PICTURE INDUSTRY, BY YEARS

Source: Department of Commerce; Bureau of the Census

Note: All money figures are in thousands of dollars. Data represent the activities of the motion-picture studios and laboratories for establishments which reported more than \$5,000 as the cost of work done. The motion picture industry has been canvassed, since 1921, in connection with the Biennial Census of Manufactures. It is not, however, a manufacturing industry, but was treated as such prior to 1921.

FEDERAL LENDING AGENCIES

Federal Home Loan Banks—Empowered to create a credit reserve for thrift and home-financing institutions, this agency has operated since July 22, 1932. It makes no advances directly to home owners.

By June 30, 1944, 3,714 member banks had received \$1,247,781.080 of which \$1,119,503,534 had been repaid. The organization may make and service loans to veterans.

Federal Public Housing Authority—The agency is empowered to provide housing for persons engaged in war activities in localities where housing shortages exist. It may acquire land, construct and operate any projects to carry out its objectives.

Non-farm housing and slum clearance are also administered by this agency.

Reconstruction Finance Corporation Mortgage Co.—Section 5c of the Reconstruction Finance Act, as approved January 31, 1935 empowers the R.F.C. to purchase the stock of an agency to maintain a sound mortgage market. The Mortgage company was organized under Maryland laws March 14, 1935 to achieve this goal.

Mortgages are purchased at par and accrued interests, less discount of one-half of one per cent. Mortgages are then resold to institutions wishing to buy them.

STANDARDS OF PRACTICE OF THE NATIONAL ASSOCIATION OF BROADCASTERS

Adopted by The Board of Directors of the NAB August 7, 1945

Public Questions

Station licenses should provide time for the presentation of public questions. Such time should be allotted with due regard to the value and interest of the subject to the public.

Treatment of Political and Public Question Broadcast

Broadcasts designed for the presentation of political, economic, social or philosophic questions or the candidacy of any person for public office or a measure to be voted upon should be presented by straightforward statement appealing to intelligence and reason.

News

News should be presented with fairness and accuracy and the station licensee should be satisfied that the arrangements made for obtaining news insure this result. News should not be selected for the purpose of furthering or hindering either side of any public question nor should it be colored by the opinions or desires of the station management, the editor or others engaged in its preparation or the person actually delivering it over the air, or, in the case of sponsored news broadcasts, the advertiser.

The fundamental purpose of news dissemination in a democracy is to enable people to know what is happening and to understand the meaning of events so that they may form their own conclusions.

Children's Programs

Programs designed specifically for children reach impressionable minds and influence social attitudes, aptitudes and approaches and, therefore, they require the closest supervision of broadcasters in the selection and control of material, characterization and plot.

This does not mean that the vigor and vitality common to a child's imagination and love of adventure should be removed. It does mean that programs should be based upon sound social concepts and presented with a superior degree of craftsmanship; that these programs should reflect respect for parents, adult authority, law and order, clean living, high morals, fair play and honorable behavior. Such programs should not contain sequences involving horror or torture or use of the supernatural or superstitious or any other material which might reasonably be regarded as likely to over-stimulate the child listener, or be prejudicial to sound character development. No advertising appeal which would encourage activities of a dangerous social nature should be permitted.

To establish acceptable and improving standards for children's programs, the National Association of Broadcasters will continuously engage in studies and consultation with parent and child study groups. The results of these studies will be made available for application to all children's programs.

Education

While all radio programs possess some educative values, broadcasters should endeavor to assist specific educational efforts. In co-operation with educators and other appropriate groups, broadcasters should search for improving applications of radio as a medium of education.

Religion

Broadcasting, which reaches men of all creeds and races simultaneously, should not

be used to convey attacks upon another's race or religion. Rather it should be the purpose of the religious broadcast to promote the spiritual harmony and understanding of mankind and to administer broadly to the varied religious needs of the community.

Commercial Programs and Length of Commercial Portion

Acceptance of programs and announcements should be limited to products and services offered by individuals and firms engaged in legitimate commerce; whose products, services, advertising, testimonials and other statements comply with pertinent legal requirements, fair trade practices and accepted standards of good taste.

Brief handling of commercial copy is recommended procedure at all times, with special consideration being given to the effect on the listener of the manner of presentation.

Member stations should hold the length of the commercial portion, including that devoted to contests and offers, to the following number of minutes and seconds.

Five minute programs.....	1:45
Five minute news programs.....	1:30
Ten minute programs.....	2:00
Fifteen minute programs.....	2:30
Twenty-five minute programs.....	2:45
Thirty minute programs.....	3:00
Sixty minute programs.....	6:00

EXCEPTIONS:

The above limitations do not apply to participation programs, announcement programs, "musical clocks," shoppers' guides and other local programs falling within these general classifications.

"Standards of Good Taste"

The following are deemed to be generally unacceptable under these Standards of Practice:

1. Unfair attacks upon competitors, competing products, or upon other industries, professions or institutions.
2. Misleading statements of price or value or misleading comparisons of price or value.
3. Continuity which describes repellingly any functions or symptomatic results of disturbances, or relief granted such disturbances through use of any product.
4. Cures and products claiming to cure.
5. Advertising statements or claims member stations know to be false, deceptive or grossly exaggerated.
6. Any remedy or other product the sale of which or the method of sale of which constitutes a violation of law.
7. Any spirituous or "hard" liquor.
8. Any fortune-telling, mind-reading, or character-reading, by handwriting, numerology, palm-reading, or astrology, or advertising related thereto.
9. Schools that offer questionable or untrue promises of employment as inducements for enrollment.
10. Matrimonial agencies.
11. Offers of "home work" except by firms of unquestioned responsibility.
12. Any "dopest," tip-sheet or race track publications.
13. All forms of speculative finance. Before member stations accept any financial advertising, it should be fully ascertained that such advertising and such advertised services comply with all pertinent federal, state and local laws.

TRANSPORTATION

Aviation

UNITED STATES AIR LINES SET RECORDS IN 1945

Commercial aviation in the United States broke all records in 1945.

The Air Transport Association of America announced that all categories of traffic operations of 24 domestic and international airlines of the United States registered unprecedented gains over 1944, ranging from 57 per cent in revenue passenger miles to about 39 per cent in ton miles of express and freight.

The A.T.A. pointed out that its figures were based on the latest carrier reports, plus a proportionate estimate for the final period on which returns had not been tabulated.

REVENUE MILES

Revenue passenger miles covered in 1945 totaled 3,525,619,866, compared with 2,246,894,489 in 1944, an increase of 56.9 per cent. Revenue miles, totaled, 219,169,459, against

144,240,440, an increase of 51.9 per cent.

Revenue passengers carried in 1945 totaled 6,621,842, compared with 4,575,716, a year earlier, an increase of 44.7 per cent. Toward the end of 1945, as more planes became available, the increase in number of passengers ran higher than 62 per cent over the corresponding 1944 period.

Ton miles of mail totaled 72,231,126, against 51,143,837 in 1944, an increase of 41.2 per cent; ton miles of express and cargo 24,505,243, against 17,694,988, an increase of 38.4 per cent.

The number of planes in the domestic airline fleet reached the total of 402 as of Dec. 15, compared with a pre-Pearl Harbor peak of 359.

The overseas fleet totaled 100 planes.

HELICOPTER RECORDS

Two international records for helicopters were broken in trials at Bridgeport, Conn. on Jan. 12, 1946, when an Army-Sikorsky R-5 helicopter soared to an altitude of 21,000 feet and reached a speed of 114.6 miles an hour.

The new altitude record, compiled with Chief Pilot C. A. Moeller at the controls,

smashed the mark of 11,243.416 feet which was set in Germany by Karl Bode in a Fokke-Wulf helicopter, Jan. 19, 1939.

The new speed record, made over the regulation 20-kilometer course, shattered the old mark of 76.151 miles per hour established by Ewald Rhoifs of Germany, June 26, 1937.

International Record . . . 1,701.81 kilometers (1,056.950 miles) F. Bourlouzki and A. Aliochine, U.S.S.R., from Moscow to Charaboulski, region of Koustanaj, April 3-6, 1939.

National (U.S.) Record . . . 920.348 kilometers (571.877 miles) S. A. U. Rasmussen, Ford Airport to Hookerton, North Carolina, July 4-5, 1927.

ALTITUDE

Neither International nor National (U.S.) Record established.

FOURTH CATEGORY (1201-1600 Cubic Meters)

DURATION

International Record . . . 61 hours, 30 minutes. F. Bourlouzki and A. Aliochine, U.S.S.R., from Moscow to Charaboulski, April 3-6, 1939.

National (U.S.) Record . . . 26 hours, 46 minutes. E. J. Hill and A. G. Schlosser, Ford Airport to Montvale, Virginia, July 4-5, 1927.

DISTANCE

International Record . . . 1,701.81 kilometers (1,056.950 miles) F. Bourlouzki and A. Aliochine, U.S.S.R., from Moscow to Charaboulski, region of Koustanaj, April 3-6, 1939.

National (U.S.) Record . . . 920.348 kilometers (571.877 miles) S. A. U. Rasmussen, Ford Airport to Hookerton, North Carolina, July 4-5, 1927.

ALTITUDE

Neither International nor National (U.S.) Record established.

FIFTH CATEGORY (1601-2200 Cubic Meters)

DURATION

International Record . . . 61 hours, 30 minutes. F. Bourlouzki and A. Aliochine, U.S.S.R., from Moscow to Charaboulski, April 3-6, 1939.

National (U.S.) Record . . . 51 hours. T. G. W. Settle and C. H. Kendall, Gordon-Bennett Balloon Race, Chicago, Illinois, Sept. 2-4, 1933.

DISTANCE

International Record . . . 1,715.800 kilometers (1,065.649 miles) Ernest Demuyter and Pierre Hoffmans, Belgium, from Warsaw, Poland to Miedlesza, U.S.S.R., Sept. 1, 1936.

National (U.S.) Record . . . 1,550 kilometers (963.123 miles) T. G. W. Settle and Wilfred Bushnell, from Basle, Switzerland to Daugieliski, Poland, Sept. 25-27, 1932.

ALTITUDE

International Record . . . 9,374 meters (30,754.529 feet) Josef Emmer, Austria, "OE-Marek Emmer II" balloon, Vienna-Lac Nuesidel, Sept. 25, 1937.

National (U.S.) Record . . . None established.

SIXTH CATEGORY (2201-3000 Cubic Meters)

DURATION

International Record . . . 61 hours, 30 minutes. F. Bourlouzki and A. Aliochine, U.S.S.R., from Moscow to Charaboulski, April 3-6, 1939.

National (U.S.) Record . . . 51 hours. T. G. W. Settle and C. H. Kendall, Gordon-Bennett Balloon Race, Chicago, Illinois, Sept. 2-4, 1933.

DISTANCE

International record . . . 1,715.8 kilometers (1,065.649 miles) Ernest Demuyter and Pierre Hoffmans, Belgium, from Warsaw, Poland to Miedlesza, U.S.S.R., Sept. 1, 1936.

National (U.S.) Record . . . 1,550 kilometers (963.123 miles) T. G. W. Settle and Wilfred Bushnell, from Basle, Switzerland to Daugieliski, Poland, Sept. 25-27, 1932.

ALTITUDE

International Record . . . 9,374 meters (30,754.529 feet) Josef Emmer, Austria, "OE-Marek Emmer II" balloon, Vienna-Lac de Nuesidel, Sept. 25, 1937.

National (U.S.) Record . . . 8,690 meters (28,508.413 feet) Capt. Hawthorne C. Gray, Scott Field, Belleville, Illinois, March 9, 1927.

SEVENTH CATEGORY (3001-4000 Cubic Meters)

DURATION

International Record . . . 61 hours, 30 minutes. F. Bourlouzki and A. Aliochine, U.S.S.R., from Moscow to Charaboulski, April 3-6, 1939.

National (U.S.) Record . . . 51 hours. T. G. W. Settle and C. H. Kendall, Gordon-Bennett Balloon Race, September 2-4, 1933.

DISTANCE

International Record . . . 1,715.800 kilometers (1,065.649 miles) Ernest Demuyter and Pierre Hoffmans, Belgium, from Warsaw, Poland to Miedlesza, U.S.S.R., Sept. 1, 1936.

National (U.S.) Record . . . 1,550 kilometers (963.123 miles) T. G. W. Settle and Wilfred Bushnell, from Basle, Switzerland to Daugieliski, Poland, Sept. 25-27, 1932.

ALTITUDE

International Record . . . 10,853 meters (32,811.132 feet) Z. J. Burzynski, Poland, at Legionowo, March 29, 1936.

National (U.S.) Record . . . 8,690 meters (28,508.413 feet) Capt. Hawthorne C. Gray, at Scott Field, Belleville, Illinois, March 9, 1927.

EIGHTH CATEGORY (4001 Cubic Meters or More)

DURATION

International Record . . . 87 hours. H. Kaulen, Germany, December 13-17, 1913.

National (U.S.) Record . . . 51 hours. Lt. Comdr. T. G. W. Settle and Lt. Charles H. Kendall, Gordon-Bennett Balloon Race, Chicago, Illinois, Sept. 2-4, 1933.

DISTANCE

International Record . . . 3,052.7 kilometers (1,896.856 miles) Berliner, Germany, February 8-10, 1914.

National (U.S.) Record . . . 1,887.6 kilometers (1,172.898 miles) A. R. Hawley, St. Louis, Missouri, to Lake Tschotogama, Canada, October 17-19, 1910.

ALTITUDE

International Record . . . 22,066 meters (72,394.795 feet) Capt. Orvil Anderson and Capt. Albert Stevens, United States, Explorer II, take-off approximately 11 miles southwest of Rapid City, South Dakota, landing on school reserve land approximately 12 miles south of White Lake, South Dakota, November 11, 1935.

SCHEDULES OPERATING **UNITED STATES AIR TRANSPORTATION SYSTEM** APRIL 1, 1945 AND MAY 18, 1942

LEGEND: Black lines indicate "Number of Round Trips Daily" from 1 to 20, depending upon the width of the line. Broken lines indicate round trip with Lodestar on April 1, 1945. Broken line with dashes and dots indicates mail and property service with single engine equipment. N. B. Flight lines as shown are diagrammatic, and do not necessarily indicate stops or omissions of stations on the certified route.

ESTABLISH REGULAR AIR FLIGHTS AROUND THE WORLD

At 3:35 p.m., Friday, September 28, a huge C-54 (Douglas Sky-master) stood poised for flight on the eastern runway of the National airport in Washington, D. C. Three minutes later the "flying boxcar" took off on the first regular round-the-world flight at the earth's greatest circumference. Its journey of 23,279 miles was completed in 149 hours and 44 minutes including 33 hours and 21 minutes ground time. Thus, the U. S. Army Air Transport Command, under whose direction the flight was made, became the first operating unit to inaugurate regularly scheduled world air travel.

Known as the "Globester," the ATC's plane carried seven men and one woman on its initial hop. Individual passengers and 13 maintenance crews were carried to destinations enroute on the world spanning

journey. Only the original eight "guests," however, made the entire flight. They included three ATC headquarters officers, three ATC public relations men, a civilian war department photographer, and three reporters representing Associated Press, International News Service, and United Press. Miss Inez Robb, of I.N.S. was the only woman aboard the plane.

Although the plane which landed in Washington at 9:42 p.m. was not the same plane that took off the previous Friday, the journey was continuous. Four planes were used on the flight, with changes being made at Karachi, Manila, Guam, and Hamilton Field, Calif.

Future flights, on a timetable basis, will leave Washington each Friday and return the following Thursday.

LOG OF THE FIRST GLOBESTER

The Washington-Bermuda flight of 838 miles was completed at 8:15 p.m. Friday. After stopping one hour and six minutes at Hamilton, Bermuda, the "Globester" thundered down the runway headed for Santa Marie in the Azores. It arrived there at 9:32 a.m. Saturday on the first "over-the-ocean" portion of the flight.

Rain and fog, encountered between Bermuda and the Azores, a distance of 2,216 miles, prevented the pioneer craft from making its scheduled arrival at 7:20 a.m., Saturday.

Next stop for the sky giant was historic Casablanca, North Africa, 1,006 miles from the Azores. Although scheduled to arrive at 2:00 p.m., Saturday, the big C-54 did not land until 3:52 p.m., being unable to make up time lost earlier in the day.

The Casablanca-Tripoli air jaunt of 1,394 miles picked up 56 minutes leaving the plane 56 minutes behind time. By 7:18, Sunday, September 30, all but eight minutes of that time had been regained, as the flight landed in Cairo at 7:10 a.m.

Nineteen U. S. Army Air force men, bound for India and China, boarded the plane at Cairo during a one hour and twenty minute stop-over.

Abadan, Arabia, next stop for the Globester and 1,093 miles from Cairo, was reached at 2:20 p.m. Pausing here only for fuel, the plane pushed on to Karachi, 1,356 miles northwest of Abadan where a new C-54 relay plane was taken over for the flight to Calcutta, India.

The new plane with the original eight passengers, took off for Luliang, China, 1,014 miles distant, and a flight over the treacherous Himalaya mountains.

A flight recapitulation at Calcutta showed the plane had covered 10,368 miles in 65 hours including stops. There were still 12,769 scheduled miles of flight. The timetables

showed the Globester was 15 minutes behind time.

On Monday, the 1,340 mile hop from Luliang to Manila in the Philippines passed through the best flying weather of the entire trip. Favorable tail winds aided the ship in beating its arrival time of 11:45 p.m. by 15 minutes. Here, the passengers, including a group of Jap war prisoners bound for the U. S., were taken on a tour of ravaged Manila.

Changing planes for the second time at Manila the expanded crew of 30 persons flew to Guam, a distance of 1,587 miles, one hour and 45 minutes ahead of schedule.

The only interruption of the continuous flight occurred 315 miles at sea from Guam when the relay craft taken over at Manila developed magneto trouble in one of its four engines and was forced to return to the Guam airbase. A second plane was boarded and the Guam-Kwajalein hop of 1,551 miles was completed without further incident.

Kwajalein to Honolulu, the same distance as San Francisco to Washington, was the longest part of the entire "run." This 2,448 mile journey was completed 15 minutes ahead of schedule in 11 hours and 55 minutes at 2:30 p.m., Wednesday, October 3.

From Honolulu, the huge plane flew 2,399 miles to San Francisco in record time picking up five minutes schedule time enroute.

The six and one-quarter day trip was successfully completed when the Globester flight landed once more at National Airport in Washington on Thursday, October 4, at 9:52 p.m. Head winds slowed the plane near its final stop, but the 2,500 mile coast to coast hop was spanned in 13 hours.

The A.T.C.'s commanding officer, Lt. Gen. Harold L. George described the flight as the "fastest world flight ever made at near the earth's greatest circumference."

TRANS-OCEAN RECORDS

Seven trans-ocean world's flight records were announced by the Air Transport Command in February, 1945, one covering the 11,000-mile Miami to Calcutta route in flying time of 46 hours, 45 minutes at an average cruising speed of 230 miles per hour.

The other six world's records, all set by Lt. Col. Henry T. Myers, in a Douglas Sky-master, are as follows:

London to Washington, 3,800 miles non-stop, in 17 hours, and 50 minutes.

Rio de Janeiro to Washington, 5,300 miles, within 24 hours with two stops. Actual flight time was 22 hours and 55 minutes.

Washington to Paris, 3,600 miles, in 18 hours.

Washington to Naples, 4,200 miles, in 24 hours with two stops.

Los Angeles to Honolulu, 2,200 miles, non-stop in 10 hours and 40 minutes.

Honolulu to Alaska, 2,600 miles non-stop, in 12 hours.

RECORD ON GUAM HOP

R. Stanley, West Hartford, Conn.

The plane was stripped of excess weight and slightly modified to streamline it for the flight. It carried 11,110 gallons of gasoline at the takeoff. The fuel load constituted almost half of its gross weight of 141,000 pounds when it left Guam. It carried 13

auxiliary fuel tanks.

The craft was stripped of all armament, radar and other equipment not required for the flight. To insure safety, air-sea rescue stations on the route were alerted. Weather conditions were favorable at the takeoff.

A U. S. superfortress en route from Guam to Washington, D. C., on Nov. 20, 1945 broke the world's nonstop distance record. The bomber flew an estimated 8,198 miles. The superfortress left Guam carrying a double crew headed by Col. Clarence S. Irvine, St. Paul, Neb., and Lt. Col. George

CROSS-COUNTRY RECORD

2,295 mile flight. Powered by two Allison 12 cylinder in-line engines mounted inside the fuselage, the bomber was aided in its record breaking hop by tail winds across the continent.

Completely streamlined, the XB-42 has a wing spread of 70 feet 6 inches, a length of 53 feet 8 inches and weighs 19,149 pounds empty. Cross weight of the plane during its

record flight was 34,000 because it carried 1,400 gallons of fuel.

The plane is designed to carry four tons of bombs on missions up to 5,000 miles. A special propeller detonator that eliminates the possibility of crewmen falling into the pusher engines during bail-out emergency is included in the plane's equipment.

On Dec. 8, an experimental bomber, the Douglas XB-42, winged across the United States from Long Beach, Calif., to Washington, D. C., in 5 hours, 17 minutes, 34 seconds. The new record slashed 46 minutes from the previous unofficial time of 6 hours, 3 minutes, over the same route.

Average air speed of the two engine pusher type plane was 432 miles per hour on the

RAILROAD SPEED AND DISTANCE RECORDS

(The following information was prepared for the National Almanac by R. A. Doster of the Western Association of Railway Executives.)

"The eastbound Streamliner City of Denver, operated by the Union Pacific and the Chicago & North Western between Denver, Colorado, and Chicago, covers the 1,048 miles between these cities in 15 hr. 38 min., or at an average of 67 m.p.h., although it makes nine stops. No other train in the world averages 67 m.p.h. for this distance.

"The following data are based on schedules that existed prior to the war. The longest passenger train runs in the world are on the People's Commissariat for Transport in the Union of Socialist Soviet Republics which extends from the Polish frontier to Vladivostok, a distance of 6,319 miles. The Trans-Siberian Express covers this distance in 232 hours 8 minutes.

"The next longest runs are those over the railways in Australia where the 4,000 miles from Sidney to Perth are covered in 4 days. Next in order of distances are those on the Canadian National and the Canadian Pacific

between Vancouver, B. C., and Montreal, Que., where the distances are 2,929.5 miles, and 2,884 miles respectively. The Continental Limited, the fastest train of the former, covers the 2,929.5 miles in 53½ hours or at an average speed of 50 m.p.h., while The Dominion, the fastest train of the latter, operating on the same schedule, averages 49.3 m.p.h.

Next are those on the African Railways where the 2,800 miles from Cape Town to Elizabethville are covered in 3 days. Next in order of distance are the runs of trains of the United States between the Pacific Coast and Chicago. Among these, the longest is the 2,346-mile run of the Golden State Limited over the Chicago, Rock Island & Pacific and the Southern Pacific to Los Angeles at an average speed of 39 m.p.h. The fastest runs are those of the 39¼ hour trains. Of these, the City of Los Angeles averages 57.9 m.p.h. for the 2,298 miles over the Chicago & North

Western and the Union Pacific to Los Angeles.

"The Flying Colognor of the German State Railways, with a speed restriction of 99.9 m.p.h., averages 80.3 m.p.h. on its run of 359.8 miles from Berlin Zoo to Cologne, and 83.1 m.p.h. for that portion of the run from Berlin Zoo to Hanover, 157.9 miles.

"The City of Denver averages 83.9 m.p.h. for the 68.3 miles from Hindrey to Odessa (passing time used), but the Hiawatha, which operates between Chicago, St. Paul & Pacific Cities, averages 87.8 m.p.h. for the 68.8 miles from Mayfair to Lake (passing time used).

"An average of 102 m.p.h. is maintained by the City of Denver for the 5.1 miles from Hindrey to Brady Island (passing time used.) No other train in the world duplicates this performance on a regularly scheduled run."

² Some yearly figures include exports manufactured in prior years.

³ 1913-21 include values of aircraft and aircraft parts. Prior to 1922 engine values were not reported separately but were probably included either with "other" internal combustion engines or with "parts" of aircraft. The values for parachutes and their parts have been included only since 1932.

⁴ Includes U. S. financed aircraft manufactured in Canada.

⁵ Includes aircraft exported under Lend-Lease.

⁶ Values are for military aircraft produced in the United States only. The data have been computed on a fixed price basis. The values do not measure output at current prices or expenditures.

*In addition to civil aviation deaths, others occur in military service. The national totals of all aviation deaths, as calculated from U.S. Census Bureau figures are: 1928, 496; 1929, 601; 1930, 620; 1931, 509; 1932, 401; 1933, 404; 1934, 428; 1935, 358; 1936, 404; 1937, 466; 1938, 436; 1939, 390; 1940, 565; 1941, 856; 1942, 2,981 and 1943, 7,057. However, these totals exclude deaths where the bodies are not found.

**The passenger death rates are the numbers killed per 100,000,000 passenger-miles. Other rates are the numbers of deaths per 100,000,000 occupant-miles.

HOW TO APPLY FOR A PASSPORT

Source: U. S. State Department, Passport Division

1. An application for a passport must be executed before a clerk of a Federal court or a State court authorized by law to naturalize aliens, or before an agent of the Department of State. **AN APPLICATION EXECUTED BEFORE ANY OTHER OFFICIAL WILL NOT BE ACCEPTED.** Passport Agents of the Department of State are located in New York (Subtreasury Bldg., also at Rockefeller Center, International Bldg.); Miami (Post Office Bldg.); and San Francisco (100 McAllister Street).

Necessary Proof to Establish American Citizenship

IMPORTANT—All documents, such as birth certificates, baptismal certificates, certified copies of records, affidavits, etc., submitted as evidence of the American citizenship of an applicant for a passport must give the place and date of birth and bear the seal of the office and signature of the officer before whom such documents were executed or by whom they were issued. Birth and baptismal certificates to be acceptable must show that the birth or baptism was recorded shortly after birth.

2. A native American citizen must submit with his application for a passport a birth certificate, or, if such a certificate is not obtainable, a baptismal certificate or a certified copy of the record of baptism. If neither of these certificates is obtainable, the applicant should submit in lieu thereof an affidavit executed by a parent, brother, sister, or other relative, preferably an older person, or the physician who attended the birth, setting forth the date and place of birth of the applicant. If an affidavit of a relative or physician cannot be obtained, an affidavit of some other reputable person having knowledge of facts which enable him to testify as to the place and date of birth should be submitted. In the affidavit a brief statement should be made showing how and through what source knowledge of the place and date of birth was acquired.

3. A person who claims American citizenship through birth abroad of a native or naturalized American father or mother should prove the parent's birth in the United States or naturalization as a citizen of this country by documentary evidence of the kind indicated in paragraph 2 or 6.

4. (a) A woman who was married to an American citizen prior to September 22, 1922, must submit evidence of her husband's American citizenship.

(b) An American woman who was married to an American citizen or to an alien on or after September 22, 1922, must submit evidence of her own citizenship.

(c) An American woman who lost American citizenship by marriage to an alien, but who alleges that after the termination of the marital relation and prior to September 22, 1922, she resumed American citizenship, must submit evidence that she was an American citizen at the time of marriage. If the marital relation is alleged to have been terminated by divorce, a certified copy of the decree of court granting the absolute divorce should be submitted. A legal separation or an interlocutory decree of divorce does not terminate marriage.

(d) An American woman who lost citizenship by marriage to an alien prior to

September 22, 1922, and resumed American citizenship after that date must submit documentary evidence of her naturalization.

5. A person who claims American citizenship by naturalization must submit with his application a certificate of naturalization.

6. (a) A person who claims citizenship through the naturalization of a parent may submit with his application the naturalization certificate of the parent through whom he derived citizenship, or a certificate of derivative citizenship issued by the Commissioner of Immigration and Naturalization under the provisions of the naturalization laws.

(b) A woman who claims citizenship through the naturalization of her husband prior to September 22, 1922, may submit the latter's certificate of naturalization or a derivative certificate of citizenship issued by the Commissioner of Immigration and Naturalization under the provisions of the naturalization laws.

7. An applicant who holds an expired or unexpired passport issued since January 2, 1918, should submit the old passport for cancellation. Such document will be accepted as evidence of citizenship if proper documentary evidence of American nationality was submitted with the previous application. If a previous passport, issued since January 2, 1918, which has definitely expired cannot be presented for surrender or cancellation, it is necessary to state briefly in the new application the disposition of the previous passport. However, if the previous passport has not definitely expired it is necessary to submit under oath a separate statement setting forth in circumstantial detail the disposition of the valid passport.

Photographs

8. Two recently taken photographs (duplicates) must be submitted of each person named in the application, one affixed to the application, the other, signed by the applicant, must accompany the application unattached. A group photograph should be used when a wife, or wife and children, are included in one application. Photographs must be full face, on thin paper, with a light background, and not over 3 by 3 inches nor less than 2½ by 2½ inches in size. Snapshot, newspaper, magazine, or full-length photographs will not be accepted. Photographs printed on photographic paper the back of which is glazed will not adhere to passports and therefore will not be accepted.

Identifying Witness

9. The identifying witness must appear in person with the applicant and fill in and sign the affidavit (on the application form) before a clerk of court or an agent of the Department of State. The identifying witness should be an adult American citizen (man or woman) who is able to state under oath that he has known the applicant for at least 2 years; that the applicant is the person he represents himself to be; and that the facts stated in the application are true to the best of the witness' knowledge and belief. An expired American passport bearing a signed photograph may be used as identification in lieu of an identifying witness. In cases of persons who have not previously obtained passports, the applicant or the witness must be known to the clerk of court

or the Passport Agent, or the applicant or the witness must be able to establish his identity, beyond reasonable doubt, by documentary evidence which should be listed on the application. If the applicant or the witness is not known to the clerk of court or Passport Agent and conclusive documentary evidence of the identity of either cannot be presented, the applicant will be required to obtain as a witness to his application an American citizen established in a recognized profession or business and having his office or place of business within the jurisdiction of the court or passport agency. However, if a clerk of court or a Passport Agent considers that an applicant has not been satisfactorily identified, he may forward the application to the Department of State with a statement of the facts in the case, giving the names of two or more persons with whom the Department may communicate in order to satisfy itself of the identity and citizenship of the applicant. A husband or wife is not acceptable as an identifying witness of the spouse unless personally known to the clerk of court of Passport Agent.

Permits from Local Draft Boards

10. Applications for passports executed by persons under the age of 30 years, who are required to register under the Selective Training and Service Act of 1940, as amended, must be accompanied by permits to depart from the United States issued by their Local Draft Boards on form 351, supplies of which are available at the Local Draft Boards.

Letters from Business Concerns and from Missionary Organizations

11. Applications of persons proceeding abroad on business must be accompanied by a letter in triplicate from the head of the firm, or in his absence from the person in charge, showing the countries to be visited and the necessity for travel therein.

When a missionary applies for a passport he should submit to the Department a letter, in triplicate, showing the name of the organization which he represents, the station to which he wishes to proceed, whether he has previously served abroad as a missionary, whether he is returning to a

station previously occupied, whether he will be replacing a missionary who is returning to the United States and, if so, the name of the missionary, or whether he will be an addition to the existing missionary staff. The letter should also show the necessity or particular urgency for the travel abroad at this time, the date or the approximate date of the proposed departure and the travel arrangements which have been made.

Travel Arrangements

12. Persons applying for passports should execute their applications at least 30 days prior to the date of their intended departure. They must furnish reasonable assurances as to their travel arrangements, showing whether transportation is to be by boat or plane, the date of departure, and whether air priority has been obtained. Transportation arrangements, reservations, etc., are matters which should be taken up with the Travel Agency.

Fees for Passport and Application

13. The total of the fees for passport and application is \$10 (\$9 must accompany the application to Washington and should be in the form of a postal money order made payable to the Secretary of State, Washington, D. C., and \$1 paid to the clerk of court or agent before whom the application is executed).

14. Under the Act of May 16, 1932, a passport is valid for 2 years from the date of issue unless limited to a shorter period. It may be renewed for a period of 2 years upon payment of fee of \$5, but the final date of expiration shall not be more than 4 years from the original date of issue. A passport which was issued within the period of 4 years to the time when application for renewal is made may be renewed.

Requests for renewal may be made by personal application or letter addressed to the Department of State, a Passport Agent, a Consular Officer of the United States, or the Chief Executives of Hawaii, Puerto Rico, the Virgin Islands, or American Samoa, and the fee, in currency or postal money order, should accompany each request. Drafts or checks will not be accepted.

Note: Fastnet is the eastern end of the North Atlantic Lane routes to ports reached via the south of Ireland. Bishops Rock is the eastern end of the North Atlantic Lane routes to ports reached via the English Channel. Where three distances between ports are given, distances are eastbound via the North Atlantic Lane routes, approved October, 1924, as follows:

A—Mar. 25 to July 7. B—Feb. 1 to Mar. 24 and July 8 to Aug. 31. C—Sept. 1 to Jan. 31.

Westbound distances are slightly less than the eastbound distances.

Where only one distance is given, the letters indicating the tracks used do not apply.

Distances from Key West and Dry Tortugas to South American ports are via Old Bahamas Channel and Mona Passage.

For distances from Gulf ports to the ports listed at the head of above table, add the following distances from Dry Tortugas (lat. 24° 30' N., long. 83° 05' W.): Tampa, Fla., 226 miles; Pensacola, 424 miles; Mobile, Ala., 467 miles; New Orleans, La., 513 miles; Port Arthur, Tex., 665 miles; Galveston, Tex., 698 miles; Corpus Christi, Tex., 792 miles.

DOMESTIC AIRLINES IN 1944

Although domestic air lines operated in 1944 with a maximum of 38 fewer planes than in 1941, they carried about three times as much express and flew over twice the pound-mileage of air mail as in 1941.

Col. Edgar S. Gorrell, president of the Air

Transport association, said that a maximum of 320 planes operated in 1944 as compared with 358 in 1941, and that express totaled 62,133,104 and 19,398,643 pounds respectively. Pound-miles of air mail were 85,803,000,000 and 26,236,027,723.

Note: There are many other canals in the United States which are not rated as "ship canals," such as the Intracoastal waterway and branches, having a total length of 1,430 miles on the Atlantic coast, the Illinois Waterway, and others which are federal canals, in addition to state canals such as the Erie barge canal.

THE INLAND WATERWAYS CORPORATION

The Inland Waterways corporation was incorporated under act of Congress, approved June 3, 1924, "to promote encourage, and develop water transportation, service and facilities in connection with the commerce of the United States, and to foster and preserve in full vigor both rail and water transportation."

The corporation has its own executive heads, traffic department, engineering department, and so forth, and operates entirely on funds derived from its operations. It supervises the maintenance of government-owned barge lines on several important water routes, including St. Louis to Minneapolis,

Kansas City, Chicago, and New Orleans; New Orleans to Mobile; Mobile to Port Birmingham, Ala., and a switching line between Port Birmingham and Ensley, Ala.

Freight revenue of the corporation in 1936 totaled \$6,094,844.32, an increase of \$316,468.42 over 1935. The corporation has a consolidated net income of \$485,402.09, and a consolidated net profit of \$539,552.47 in 1936. Total revenue tonnage for 1936 was 1,856,434 tons, an increase of 124,295 tons over 1935. In 1936 the corporation had 1,604,694,574 ton-miles. Average haul was 884 miles.

FORD THEATER A LINCOLN MUSEUM

The Ford theater, in which President Lincoln was shot, was dedicated February 12, 1932, as a national museum. It contains

the most complete collection of Lincoln historical material to be found in the United States.

COMMERCE ON PRINCIPAL RIVERS, CANALS, AND CONNECTING CHANNELS OF UNITED STATES, 1935 TO 1940

(In thousands of short tons of 2,000 pounds. General ferry traffic, car ferry traffic, and cargoes in transit are not included in this table.)

THE PANAMA CANAL

Officially opened to navigation July 12, 1920, the Panama Canal traverses the Isthmus of Panama, a distance of 44.04 nautical miles or 50.72 statute miles. An earlier opening date is recorded, but land slides and general wartime conditions delayed the official dedication of the Canal until the summer of 1920.

The mouth of the Canal begins in Limon Bay at latitude 9 degrees 23 minutes North by longitude 79 degrees, 56 minutes West, and the canal ends in the Bay of Panama on the Pacific side at 8 degrees, 54 minutes North and 79 degrees 32 minutes West. This makes the line of the Canal run northwest-southeast for about 27 miles in an air line. The Canal channel is 300 to 1,000 feet wide with a minimum depth of 41 feet.

In structure the Canal is a lock and lake type. Its purpose is to raise ships from the sea to summit level, a normal 85 feet above sea level, or lower passing traffic to sea level from the summit elevation.

In 1935 a concrete dam was constructed across the Chagres river to form a reservoir of Madden Lake storing 22 billion cubic feet of water. The lake prevents any danger of water shortage or overflows from the river.

Following an ill fated venture in 1879 by the French government to construct a canal across the Isthmus, the U. S. government purchased the French interests and a treaty was negotiated with newly independent Panama to build the canal.

Terms of the treaty transferred title to the Canal Zone which extends five miles on either side of the Canal to the U. S. for \$10,000,000 plus \$250,000 a year after the ninth year. Colombia was also paid \$25,000,-

000 to relinquish any rights to the purchased lands.

The zone, covering an area of 553 square miles, has a civil population of 31,947 persons. Total military personnel statistics have been unavailable since Pearl Harbor.

On August 11, 1939, Congress approved appropriations, not to exceed \$277,000,000, for the construction of a third set of locks to be located near existing locks at Gatun, Pedro Miguel and Miraflores. Also included in the approved plans were facilitating bypass channels connecting the new locks with the main Canal channel. Actual work on the new project began July 1, 1940.

Officers of the Panama Canal on the Isthmus are Maj. Gen. Joseph C. Mehafeey, governor of the Canal, Brig. Gen. Francis K. Newcomer, engineer of maintenance.

Additional officers residing in Washington include Bernard F. Burdick, chief of office and general purchasing, James C. Hughes, assistant to Burdick, Floyd B. Heimer, second assistant to the chief of office and G. G. Allen, assistant comptroller.

Advantages of the Canal are detected by noting the ocean distances saved when ships use the Canal route. Between New York and San Francisco, the distance of 13,135 nautical miles, by way of the Strait of Magellan, has been cut to 5,262 miles. From New York to Valparaiso, 3,747 miles are saved; to Yokohama 3,357; to Callao, 6,250.

British liners moving from Liverpool to San Francisco by way of the Magellan Strait, cover 13,502 miles. By using the Canal, a saving of 5,666 miles is affected. The trip to Wellington, N. Z. from Liverpool has been reduced 1,366 miles. Honolulu is now 4,403 miles nearer Liverpool by way of the Canal.

HOTTEST AND COLDEST INHABITED PLACES IN THE WORLD

Verhoyansk, a town in northeastern Siberia, is known as the coldest inhabited spot in the world, the lowest reading on record being 90 degrees below zero Fahrenheit. What

is probably the highest temperature was observed at Azizia, a village in southern Tunis, where the mercury registered 136.4 degrees above zero.

¹Columbus' flagship. Other ships were *Pinta* and *Nina*. Columbus' fastest voyage was 40 days, his second, from Cadiz, Spain, to Dominica in the West Indies.

²First ship to use steam in crossing. Paddle wheels in use 18 days, and the *Savannah* was under sail the rest.

*Distance between New York and Plymouth varies according to route.

AIR RESISTANCE OF RAILROAD TRAINS

The air resistance of a steam locomotive and twenty cars is 5,540 pounds to the square foot at 60 miles per hour, 9,845 pounds at 80 miles an hour, and 15,380 pounds at 100 miles. It takes 885 horsepower to overcome air resistance of such a train at 60 miles an hour; 2,160 horsepower at 80 miles per hour, and 4,100 horsepower at 100 miles.

RAILWAY EXPRESS SERVICES

Operating on a nationwide scale, Railway Express begins its 108th year of active service to the public in 1946. The agency, organized to expedite the movement of cargo by rail or plane, employs 60,000 men and women in

Year	Shipments	Year	Shipments
1938	138,896,324	1940	160,777,326
1939	148,855,809	1941	172,615,839

Handling procedures in 1944 were carried out by 16,000 motor trucks operating over 278,931 miles. Much of this mileage is accumulated by railways.

Beginning on a commercial basis Sept. 1, 1927, the agency now uses air service on regular flights. During its first year of operation this service accommodated some 17,000 shipments by air express.

Air express serves all domestic areas and

The following table shows the expansion of the agency's air services:

23,000 offices throughout the country. All services offered to the public include pick-up and delivery at points of origin and destination. Widespread use of this service is indicated by the following table.

Year	Shipments	Year	Shipments
1942	165,024,682	1944	200,289,443
1943	179,208,360		

augments its services through contracts with international airways to carry shipments to Central and South America, Canada, Alaska, Mexico, West Indies, Caribbean areas, Europe, Africa, and Hawaii.

During the war much of the agency's air service went to the government by carrying essential war materials over 375,000 miles per day.

FRANKLIN INVENTOR WHEN 80

In 1786 when Benjamin Franklin was 80 years old, he invented a wooden arm device 8 feet long for removing books from high shelves. Like his other inventions, this was never patented.

STATISTICS OF ALL-STAR GAMES

FIRST GAME

At Chicago, July 6, 1933

	R.	H.	E.
Nationals.....	0 0 0 0 2	0 0 0 0	2
Americans.....	0 1 2 0 0	1 0 0 0	4
Batteries—Hallahan, Warneke, Hubbell and J. Wilson, Hartnett; Gomez, Crowder, Grove and R. Ferrell.			

Paid attendance—49,200.

SECOND GAME

At New York, July 10, 1934

	R.	H.	E.
Americans.....	0 0 0 2 6	1 0 0 0	9
Nationals.....	1 0 3 0 3	0 0 0 0	7
Batteries—Gomez, Ruffing, Harder and Dickey, Cochrane; Hubbell, Warneke, Mungo, J. Frankhouse and Hartnett, Lopez.			

Paid attendance—48,363.

THIRD GAME

At Cleveland, July 8, 1935

	R.	H.	E.
Nationals.....	0 0 0 1 0	0 0 0 0	1
Americans.....	2 1 0 1 0	0 0 0 x	4
Batteries—Walker, Schumacker, Derringer, J. Dean and J. Wilson, Hartnett; Gomez, Harder and Hemsley.			

Paid attendance—69,812.

FOURTH GAME

At Boston, July 7, 1936

	R.	H.	E.
Americans.....	0 0 0 0 0	0 3 0 0	3
Nationals.....	0 2 0 0 2	0 0 0 x	4
Batteries—Grove, Rowe, Harder and R. Ferrell, Dickey; J. Dean, Hubbell, C. Davis, Warneke and Hartnett.			

Paid attendance—25,534.

FIFTH GAME

At Washington, July 7, 1937

	R.	H.	E.
Nationals.....	0 0 0 1 1	1 0 0 0	3
Americans.....	0 0 2 3 1	2 0 0 x	8
Batteries—J. Dean, Hubbell, Blanton, Grisom, Mungo, Walters and Hartnett, Mancuso. Gomez, Bridges, Harder and Dickey.			

Paid attendance—31,391.

SIXTH GAME

At Cincinnati, July 7, 1938

	R.	H.	E.
Nationals.....	1 0 0 1 0	0 2 0 0	4
Americans.....	0 0 0 0 0	0 0 0 1	1
Batteries: Vander Meer, Lee, Brown, and Lombardi; Gomez, Allen, Grove, and Dickey.			

SEVENTH GAME

At New York, July 11, 1939

	R.	H.	E.
Nationals.....	0 0 1 0 0	0 0 0 0	1
Americans.....	0 0 0 2 1	0 0 0 x	3
Batteries: Derringer, Lee, Fette, and Lombardi; Ruffing, Feller, Bridges, and Dickey.			

EIGHTH GAME

At St. Louis, July 10, 1940

	R.	H.	E.
Americans.....	0 0 0 0 0	0 0 0 0	0
Nationals.....	3 0 0 0 0	0 0 1 x	4
Batteries: Ruffing, Newsom, Feller, and Dickey; French, Wyatt, Walters, Derringer, and Lombardi.			

NINTH GAME

At Detroit, July 8, 1941

	R.	H.	E.
Americans.....	0 0 0 1 0	1 0 1 4	7
Nationals.....	0 0 0 0 0	1 2 2 0	5
Batteries: Smith, Hudson, Lee, Feller, and Dickey; Passeau, Walters, Wyatt, Derringer, Lopez, and Owen.			

At Cleveland, July 7, 1942

	R.	H.	E.
Service Stars.....	0 0 0 0 0	0 0 0 0	0
Americans.....	2 1 0 0 0	0 2 0 x	5
Batteries: Rigney, Feller, Grodzicki, and Pytlak; Hughson, Hudson, Bagby, and Kosar.			

TENTH GAME

At New York, July 6, 1942

	R.	H.	E.
Americans.....	3 0 0 0 0	0 0 0 0	3
Nationals.....	0 0 0 0 0	0 1 0 1	6
Batteries: Chandler, Benton, and Tebbetts; Walters, Passeau, Vander Meer, Cooper, and Lombardi.			

ELEVENTH GAME

At Philadelphia, July 13, 1943

	R.	H.	E.
Americans.....	0 3 1 0 1	0 0 0 0	5
Nationals.....	1 0 0 0 0	0 1 0 1	3
Batteries: Leonard, Newsom, Hughson, and Early; Cooper, Vander Meer, Sewell, Javery, Lombardi, and Cooper.			

TWELFTH GAME

At Pittsburgh, 1944

	R.	H.	E.
Americans.....	0 1 0 0 0	0 0 0 0	1
Nationals.....	0 0 0 0 4	0 2 1 x	7
Winning pitcher Raffensberger; losing, Hughson.			

Attendance 29,589, Receipts \$81,275.

No game in 1945.

SERIES POOL

The 1945 World Series players pool was the largest in history; \$445,714.50. The Cubs voted 33½ shares of the pool netting each man approximately \$4,277 a share. The Tigers voted 31 shares with each full share holder drawing \$6,123. These totals do not include payments for radio right to be announced later.

"S. O. S." DISTRESS SIGNAL

The distress signal "S. O. S." expressed in code as — — — (three dots, three dashes, three dots), was selected arbitrarily at the international radiotelegraph confer-

ence at London in 1912, because of its simplicity to send and detect. The letters do not signify any particular words. The call previous to that time had been "C. Q. D."

1936

Knockouts—Charley Retzlaff (1), Jack Sharkey (3), Al Ettore (5), Jorge Brescia (3), Eddie Simms (1). Knockout—By Max Schmeling (12).

LIGHT HEAVYWEIGHT CHAMPIONS

(161 to 175 Pounds)

1903, **George Gardner**; 1903-1905, **Bob Fitzsimmons**; 1905-1907, **Philadelphia Jack O'Brien**; 1907-1911 or 1912, **Tommy Burns** (did not claim championship); 1911 or 1912-1916, **Jack Dillon** (claimed title but didn't fight under it); 1916-1920, **Battling Levinsky**; 1920-1922, **Georges Carpentier**; 1922, **Gene Tunney**; 1922-1923, **Harry Greb**; 1923-1925, **Gene Tunney** (relinquished title to go into heavyweight class); (previously, **Battling Siki K. O.'d Carpentier** in 1922, and **Mike McTigue** beat **Siki** in 1923.

Paul Berlenbach beat **McTigue** in New York, 1925); 1925-1926, **Paul Berlenbach**; 1926-1927, **Jack Delaney** (resigned to enter heavyweight class); 1927, **Mike McTigue**; 1927-1929, **Tommy Loughran**; (relinquished title to enter heavyweight class); 1929-1930, **Jimmy Slattery**; 1930-1934, **Maxie Rosenbloom** (recognized in New York, but not by NBA); 1934-1935, **Bob Olin**; 1935-1939, **John Henry Lewis**; 1939-1940, **Billy Conn**; 1941-1944, **Gus Lesnevich**.

MIDDLEWEIGHT CHAMPIONS

(160 Pounds)

1891-1896, **Bob Fitzsimmons** (resigned title. No fully acclaimed champion until 1907. Among claimants were **Kid McCoy**, **Philadelphia Jack O'Brien**, **Tommy Ryan** and others). 1907, **Stanley Ketchel**; 1908, **Billy Papke**; 1908-1910, **Ketchel** (shot and killed Oct. 15, 1910. Thereafter title became vacant with such men as **Papke**, **Mike Gibbons**, **Eddie McGoorty** claiming it). 1913, **Frank Klaus**; 1913-1914, **George Chip**; 1914-1917, **Al McCoy**; 1918-1920, **Mike O'Dowd**; 1920-1923, **Johnny Wilson**; 1923-

1926, **Harry Greb**; 1926, **Tiger Flowers**; 1926-1931, **Mickey Walker**. (Walker vacated in 1931 because unable to make weight. Among claimants were **Gorilla Jones** and **Ben Jeby**. Jones was K.O.'d by **Marcel Thil**, France, but NBA vacated Thil's title because of inactivity. Jeby was recognized); 1933, **Lou Brouillard**; 1933-1934, **Vince Dundee**; 1934-1935, **Teddy Yarosz**; 1935-1936, **Babe Risko**; 1936-1938, **Fred Steele**; 1938, **Fred Steele**, **Al Hostak**, **S. Kreiger**; 1939, **Al Hostak**; 1940-1944, **Tony Zale**.

WELTERWEIGHT CHAMPIONS

(147 Pounds)

1892-1894, **"Mysterious Billy" Smith**; 1894-1897, **Tommy Ryan** (entered middleweight ranks in 1897); 1897-1900, **Smith**; 1900, **Rube Ferns**; 1900-1901, **Matty Matthews**; 1901, **Ferns**; 1901-1906, **Joe Walcott**; 1906-1907, **Honey Melody**; 1907-1910, **Mike (Twin) Sullivan** (vacated title to become middleweight); 1910-1911, **Jimmy Clabby** (vacated title to become middleweight); (Ray Bronson, Clarence Ferns, others claimed title, which really was vacant until 1915); 1915-1919, **Ted Lewis** and **Jack Britton** alternated as champion several

times; 1919-1922, **Jack Britton**; 1922-1926, **Edward "Mickey" Walker**; 1926-1927, **Pete Latzo**; 1927-1929, **Joe Dundee**; 1929-1930, **Jackie Fields**; 1930, **Young Jack Thompson**; 1930-1931, **Tommy Freeman**; 1931, **Young Jack Thompson**; 1931-1932, **Lou Brouillard**; 1932-1933, **Jackie Fields**; 1933, **Young Corbett III**; 1933-1934, **Jimmy McLarnin**; 1934, **Barney Ross**; 1934-1935, **McLarnin**; 1935-1938, **Barney Ross**; 1938-1939, **Henry Armstrong**; 1940, **Fritz Zivic**; 1941-1944, **Fred Cochrane**.

LIGHTWEIGHT CHAMPIONS

(135 Pounds)

1885-1893, **Jack McAuliffe** (retired undefeated); 1893-1899, **Kid Lavigne**; 1899-1901, **Frank Erne**; 1901-1908, **Joe Gans**; 1908-1910, **Battling Nelson**; 1910-1912, **Ad Wolgast**; 1912-1914, **Willie Ritchie**; 1914-1917, **Freddie Welsh**; 1917-1924, **Bennie Leonard** (retired undefeated); 1925, **Jimmy Goodrich**; 1925-1926, **Rocky Kansas**;

1926-1930, **Sammy Mandell**; 1930, **Al Singer**; 1930-1933, **Tony Canzoneri**; 1933-1935, **Barney Ross**; (relinquished title when unable to make weight); 1935-1936, **Tony Canzoneri**; 1936-1938, **Lou Ambers**; 1938, **Henry Armstrong**; 1939, **Lou Ambers**; 1940, **Lew Jenkins**; 1941-1943, **Sammy Angott**; 1944, **S. Angott**, **J. Zurita**.

FEATHERWEIGHT CHAMPIONS

(Now 126 Pounds)

1890, **Billy Murphy** (retired when unable to make weight); 1890-1899, **George Dixon**; (was beaten several times but he claimed class was 118 pounds); 1899-1901, **Terry McGovern**; 1901-1904 (title clouded, Young Corbett K.O.'d McGovern, but neither could make weight); 1904-1908, **Tommy Sullivan**; 1908-1912, **Abe Attell**; 1912-1923, **Johnny Kilbane**; 1923, **Eugene Ciriql**; 1923-1925, **Johnny Dundee** (outgrew class); 1925-1927, **Louis "Kid" Kaplan** won elimination contest, then outgrew class; 1927-1928, **Benny Bass**; 1928, **Tony Canzoneri**; 1928-1929, **Andre Routis**; 1929-1932, **Christopher "Battling" Battalino** (retired when unable

to make weight); 1932-1934, **Kid Chocolate** was accepted by N. Y. State Athletic commission, **Tommy Paul** by N. B. A. Chocolate relinquished title in 1934 because unable to make weight. **Freddie Miller** beat **Paul** in 1933; 1934-1935, **Miller** and **Baby Arizmendi** claimed title; 1936-1937, **Petey Sarron**, after **Mike Belloise**, who was recognized by N. Y. commission, waived claim to title because of ill health; 1937-1938, **Henry Armstrong**; 1938-1939, **Joey Archibald**; 1940, **Harry Jaffra**; 1941, **Richie Lemos**, **Jackie Wilson**; 1942, **Jackie Wilson**; 1943, **Jackie Wilson**, **Jackie Callura**, **Phil Terranova**.

BANTAMWEIGHT CHAMPIONS

(Now 118 Pounds)

1887-1890, **Tom Kelly**; 1890-1894, **George Dixon** (outgrew class); 1894-1899, **Jimmy Barry** (retired undefeated); 1899-1900, **Terry McGovern** (retired); 1900-1903, **Harry Forbes**; 1903-1904, **Frankie Neil**; 1904, **Joe Bowker** (outgrew and retired. Digger Stanley and Jimmy Walsh claimed title and fought three times. Both vacated in 1907 and Johnny Coulon claimed title); 1907-1914, **Johnny Coulon** (fought at 116 pounds. Had been 112, and previously 105); 1914-1917, **Kid Williams** (lost on a disputed foul in 1915 to **Johnny Ertle**, who some considered champion); 1917-1920, **Pete Herman**; 1920-1921, **Joe Lynch**; 1921-1922, **Johnny Buff**;

1922-1924, **Joe Lynch**; 1924, **Abe Goldstein**; 1924-1925, **Eddie Martin**; 1925-1927, **Charles "Phil" Rosenberg** (forfeited when unable to make weight); 1927-1931, there was no fully recognized champion. N.B.A. picked **Bud Taylor**; N. Y. commission acknowledged several others at various times among them **Kid Francis** and **Al Brown**; 1931-1932, **Eugene Huat**; 1932-1934, **Al Brown**; 1934-1935, **Sixto Escobar** (named after N.B.A. declared title vacant); 1935, **Lou Salica**; 1935-1937, **Sixto Escobar**; 1937, **Harry Jeffra**; 1937-1939, **Sixto Escobar**; 1940-1941, **Lou Salica**; 1942-1944, **Manuel Ortiz**.

FLYWEIGHT CHAMPIONS

(112 Pounds)

1921-1922, **Johnny Buff**; 1922-1923, **Pancho Villa** (by some Villa is rated as having held championship to 1925 when he died, though Frankie Genaro had beaten him in 1923); 1923-1925, **Frankie Genaro**; 1925-1927, **Fidel La Barba**; 1927-1930, La Barba retired in 1927 to enter college, and no recognized champion appeared. 1930, **Midget Wogast** named by N. Y. commission, and N.L.A. chose **Frankie Genaro**. Hereafter the championship is in chaos. Genaro and Wogast fought a 15 round draw in 1930. **Young Perez K. O'd** Genaro in 1931 and was recognized in Europe, but England elected **Jackie Brown**, whom N.B.A. also recognized. In 1934, the N. Y. commission

elected **Midget Wogast**, and N.B.A. also recognized him. In 1935, N. Y. commission rated **Small Montana**, while N.B.A. nominated no one. In 1936, **Jackie Brown** was generally recognized, but N.B.A. rated **Small Montana** tops. In 1937, **Benny Lynch** was generally recognized as tops in the midget field. Lynch, however, retired in 1938 and Peter Kane took over top ranking in this class. **Small Montana** regained the top place in 1939 after dethroning Kane. In 1943, following a confused four years of boxing during the emergency period, **Jackie Paterson** generally was recognized by experts as the best flyweight boxer.

1945 A. A. U. BOXING CHAMPIONS

112 lb. Class—**Keith Hamilton**, New Orleans
118 lb. Class—**Amos Aiton**, Oklahoma City
126 lb. Class—**Virgil Franklin**, Oklahoma City
135 lb. Class—**Jetson Arnold**, Philadelphia

147 lb. Class—**Gabe Lee**, Chicago
160 lb. Class—**Allen Faulkner**, Buffalo
175 lb. Class—**Richard Nutt**, Danfield, Va.
Heavyweight Class—**Charles Lester**, Cleveland

FOOTBALL COACHES' ALL-AMERICAN TEAM

The American Football Coaches' Association on Dec. 26, 1945 announced its first All-American football team, with four members of Army's undefeated mythical national champions of the honorary eleven.

Fullback Felix "Doc" Blanchard and Halfback Glenn Davis of Army, with St. Mary's Herman Wedemeyer and the Oklahoma Aggies' Bob Fenimore were other backfield

nominees.

The line included: Ends, Dick Duden, Navy, and Max Morris, Northwestern; tackles, Dewitt Coulter, Army, and George Savitsky, Penn; guards, John Green, Army, and Warren Amling, Ohio State, and center, Dick Scott of Navy, a surprise choice over Vaughn Mancha, Alabama star, who was named to the second team.

1918-19—No decision***	1893-94—Montreal A.A.A.

***Seattle, Pacific Coast Hockey League champions, and Montreal Canadiens, National Hockey League champions, met at Seattle but series called off because of influenza epidemic and death of Joe Hall of Canadiens.

HOCKEY TROPHY WINNERS

The GEORGES VEZINA TROPHY is awarded annually to the goal-tender having the lowest "goals against" record during the regular season. The trophy was presented in memory of the late George Vezina, who starred in the nets for the Montreal Canadiens for fifteen years.

1944-45—W. Durnan, Canadiens	1937-38—C. Thompson, Boston	1930-31—R. Worters, Americans
1943-44—W. Durnan, Canadiens	1936-37—N. Smith, Detroit	1929-30—C. Thompson, Boston
1942-43—J. Mowers, Detroit	1935-36—C. Thompson, Boston	1928-29—G. Hainsworth, Canadiens
1941-42—F. Brimsek, Boston	1934-35—L. Chabot, Chicago	1927-28—G. Hainsworth, Canadiens
1940-41—W. Broda, Toronto	1933-34—C. Gardiner, Chicago	1926-27—G. Hainsworth, Canadiens
1939-40—D. Kerr, Rangers	1932-33—C. Thompson, Boston	
1938-39—F. Brimsek, Boston	1931-32—C. Gardiner, Chicago	

The DR. DAVID A. HART TROPHY is awarded annually to the player voted the "most valuable" to his club during the season.

1944-45—E. Lach, Canadiens	1936-37—A. C. Siebert, Canadiens	1928-29—R. Worters, Americans
1943-44—W. Pratt, Toronto	1935-36—E. Shore, Boston	1927-28—H. Morenz, Canadiens
1942-43—W. Cowley, Boston	1934-35—E. Shore, Boston	1926-27—H. Gardiner, Canadiens
1941-42—T. Anderson, Americans	1933-34—A. Joliat, Canadiens	1925-26—N. Stewart, Montreal
1940-41—W. Cowley, Boston	1932-33—E. Shore, Boston	1924-25—W. Burch, Hamilton
1939-40—E. Goodfellow, Detroit	1931-32—H. Morenz, Canadiens	1923-24—F. Nighbor, Ottawa
1938-39—H. Blake, Canadiens	1930-31—H. Morenz, Canadiens	
1937-38—E. Shore, Boston	1929-30—N. Stewart, Montreal	

The LADY BYNG TROPHY is awarded annually to the player voted the "most gentlemanly" in his conduct on the ice during the season.

1944-45—W. Mosienko, Chicago	1937-38—G. Drillon, Toronto	1930-31—F. Boucher, Rangers
1943-44—C. Smith, Chicago	1936-37—M. Barry, Detroit	1929-30—F. Boucher, Rangers
1942-43—M. Bentley, Chicago	1935-36—E. Romnes, Chicago	1928-29—F. Boucher, Rangers
1941-42—S. Apps, Toronto	1934-35—F. Boucher, Rangers	1927-28—F. Boucher, Rangers
1940-41—R. Bauer, Boston	1933-34—F. Boucher, Rangers	1926-27—W. Burch, Americans
1939-40—R. Bauer, Boston	1932-33—F. Boucher, Rangers	1925-26—F. Nighbor, Ottawa
1938-39—C. Smith, Rangers	1931-32—J. Primeau, Toronto	1924-25—F. Nighbor, Ottawa

The CALDER TROPHY is awarded annually to the player selected by the NHL hockey writers as the "outstanding rookie" of the season.

1944-45—F. McCool, Toronto	1939-40—K. Macdonald, Rangers	1934-35—D. Schrier, Americans
1943-44—A. Ebdnar, Toronto	1938-39—F. Brimsek, Boston	1933-34—R. Blinco, Maroons
1942-43—G. Stewart, Toronto	1937-38—C. Dahlstrom, Chicago	1932-33—C. Voss, Detroit
1941-42—G. Warwick, Rangers	1936-37—S. Apps, Toronto	
1940-41—J. Quilty, Canadiens	1935-36—M. Karakas, Chicago

1945 GOLF TOURNAMENT WINNERS

1945 National Collegiate Golf Meet, June 25-27, Ohio State University

TEAM CHAMPIONSHIP

1945 BIG TEN INDOOR TRACK AND FIELD CHAMPIONSHIPS

60-Yards Dash: Buster (Illinois), :06.4.
70-Yards High Hurdles: Walker (Illinois), :08.9.
70-Yards Low Hurdles: Walker (Illinois), :08.
440-Yards Run: Kelley (Illinois), :50.6.
880-Yards Run: Kelley (Illinois), 1:56.4.
One Mile Run: Robert Hume (Michigan), 4:25.0.
Two Miles Run: Ross Hume (Michigan), 9:45.4.

One Mile Relay: * Illinois (Buster, Johnson, Gonzales, Kelley), 3 min. 24.7 seconds.
* Ran in two heats, against time.
Pole Vault: Tie (Schmidt—Ohio State), (Phelps—Illinois), 13 feet 9 inches.
Shot Put: Thomas (Ohio), 47 feet ½ inch.
High Jump: Backman (Wisconsin), 6 feet 2 inches.
Broad Jump: Aihara (Illinois), 22 feet, 11½ inches.

Auto Racing

NATIONAL AUTO RACING CHAMPIONS

(Determined by American Automobile Association on Point Basis)

1911—R. Mulford.	1922—Jimmy Murphy.	1933—Louis Meyer.
1912—R. De Palma.	1923—Eddie Hearne.	1934—Bill Cummings.
1913—E. Cooper.	1924—Jimmy Murphy.	1935—Kelly Petillo.
1914—R. De Palma.	1925—Peter De Paolo.	1936—Louis Meyer.
1915—E. Cooper.	1926—Harry Hartz.	1937—Wilbur Shaw.
1916—Dario Resta.	1927—Peter De Paolo.	1938—Floyd Roberts.
1917—E. Cooper.	1928—Louis Meyer.	1939—Wilbur Shaw.
1918—R. Mulford.	1929—Louis Meyer.	1940—Rex Mays.
1919—"Howdy" Wilcox.	1930—Billy Arnold.	1941—Rex Mays.
1920—G. Chevrolet.	1931—Louis Schneider.	
1921—Tommy Milton.	1932—Bob Carey.	

There have been no races since 1941.

TEN GREATEST DRIVERS

T. E. Myers' Selections

1. Ralph De Palma	6. Rex Mays
2. Lou Meyer	7. Bill Cummings
3. Tommy Milton	8. Dario Resta
4. Jimmy Murphy	9. Jules Goux
5. Frank Lockhart	10. Harry Hartz

Ralph De Palma's Selections

1. Ray Harroun	6. Caleb Bragg
2. Jules Goux	7. Spencer Wishart
3. Frank Lockhart	8. Pete De Paolo
4. Tommy Milton	9. Harry Hartz
5. David Bruce-Brown	10. Bob Burman

T. E. "Pop" Myers is general manager of the Indianapolis Speedway; Ralph De Palma, who in 1912 pushed his car across the finish line even though he was out of the money, has been "people's choice" in every one of the ten Indianapolis races he entered.

HISTORY OF ONE-MILE AUTOMOBILE SPEED MARKAs of December 31, 1938

Source: Contest Board, American Automobile association

The first recorded effort for one mile was made in 1898 by Chasseloup-Laubat, driving a Jentaud, in France. His average was 39.23 m.p.h. This was increased to 65.79 in 1899 by Jenatzky, in France. The first man to travel better than 100 m.p.h. was Rigolly, in 1904, at 103.56 m.p.h., followed by Baras, with 104.53 in the same year. The first over 200 m.p.h. was Major H. O. D. Segrave, 203.790 in 1927.

Note:—World's and International speed records are from a standing start, while the American records are from a flying start. However, both divisions recognize standing and flying start performances over the six shorter distances (i.e., 1K, 1M, 5K, 5M, 10K, 10M).

BADMINTON RANKINGS, 1945

Source: Midwest Badminton Assn.

Men's Singles: Richard J. Casey, McDonnell Badminton Club, St. Louis, Mo.
Women's Singles: Marie Bytner, Webster Groves, B. C., St. Louis, Mo.
Men's Doubles: Jack Riday—Dean Foote, West Allis B. C., West Allis, Wisconsin.
Women's Doubles: Virginia Smith—Marie Bytner, Webster Groves B. C., St. Louis, Mo.
Mixed Doubles: Virginia Smith—W. Russell Smith, Webster Groves B. C., St. Louis, Missouri.
Veteran's Doubles: Wm. C. Lenhart—J. G. White, Skokie B. C., Winnetka, Ill.
Junior Boys Doubles: John Colbrunn—Ted Moehlmann, Jr., Webster Groves B. C., University City B. C., St. Louis, Missouri.
Junior Girls Doubles: Betsy Vaughan Lois McAllister, Chicago B. C., River Forest, Ill.

UNITED STATES FOGGIEST SPOTS

Moose Peak lighthouse in the mouth of the Bay of Fundy, a few miles from Machiasport, Me., holds the record of being the foggiest spot in the United States. The lighthouse service of the United States Department of Commerce reported that in 1930 there were 1,562 hours of fog there. The log

of the station shows that during a 16-year period the annual average of fog was 1,607 hours.

The Point Reyes light station, California, holds the Pacific coast record. Its record for a period of 45 years shows an annual average of 1,398 hours.

AMERICA'S CUP RACES, 1937

The biggest event in yachting, the American Cup Races, have been suspended since August, 1937 because of the war. Data for the event in that year follows.

Comparison of Yachts

	Endeavor II.	Ranger
Overall length.....	135.10 ft.	135.3 ft.
Waterline.....	86.7 ft.	87 ft.
Beam.....	21.7 ft.	20.11 ft.
Draft.....	15 ft.	15 ft.
Tons.....	164	166.5
Mast height.....	168 ft.	165.11 ft.
Sail area.....	7,560 sq.ft.	7,550 sq.ft.

Skippers and Designers

Endeavor II—T. O. M. Sopwith; Charles E. Nicholson.
Ranger—H. S. Vanderbilt; W. Starling Burgess and Sparkman and Stephens.

Afterguards

Endeavour II—T. O. M. Sopwith, Sir Ralph St. G. Gore, Frank Murdock, Mrs. Sopwith.
Ranger—H. S. Vanderbilt, Olin J. Stephens, Roderick Stephens, Jr., Arthur Knapp, Jr., Professor Zenas Bliss.

THE AMERICA'S CUP — ELIMINATION

Preliminary Series

--------------------	-----	-------

Standings—Three Series

	W.	L.
Ranger.....	8	0
Yankee.....	4	6
Rainbow.....	0	7

M. S. indicates winner's margin in minutes and seconds.

*Rainbow finished second, trailing 4:38; Yankee third, 4:39 behind.

†Rainbow did not finish.

THE AMERICA'S CUP SERIES

Yacht Won Lost
Ranger, U. S. Defender..... 4 0
First Race—Sailed Saturday, July 31, over thirty-mile windward-leeward course; won by Ranger, timed in 4:41:15, with margin 17 minutes 5 seconds; Endeavour II timed in 4:58:20.

Second Race—Sailed Monday, Aug. 2, over thirty-mile triangular course; won by Ranger, timed in 3:41:33, with margin 18 minutes 32 seconds. Endeavour II timed in 4:00:05.

Yacht Won Lost
Endeavor II, British challenger..... 0 4

Third Race—Sailed Wednesday, Aug. 4, over thirty-mile windward-leeward course; won by Ranger, timed in 3:54:30, with margin 4 minutes 27 seconds; Endeavour II timed in 3:58:57.

Fourth Race—Sailed Thursday, Aug. 5, over thirty-mile triangular course; won by Ranger, timed in 3:07:49, with margin 3 minutes 37 seconds.

AMERICA'S CUP RECORD

Year	Winner	Loser
1851—America.....	Aurora	
1870—Magic.....	Cambria	
	Columbia.....	Livonia
1871—Sappho.....	Countess of Dufferin	
1876—Madeleine.....	Atalanta	
1881—Mischieff.....	Genesta	
1885—Puritan.....	Galatea	
1886—Mayflower.....	Thistle	
1887—Volunteer.....	Valkyrie II	
1893—Vigilant.....	Valkyrie III	
1895—Defender.....	Shamrock I	
1899—Columbia.....	Shamrock II	
1901—Columbia.....	Shamrock III	
1903—Reliance.....	Shamrock IV	
1920—Resolute.....		

Year Winner Loser
1930—Enterprise..... Shamrock V
1934—Rainbow..... Endeavour
1937—Ranger..... Endeavour II

In 1851 13 other British yachts defended with Aurora.

In 1870 22 other American yachts defended with Magic.

American yachts have won every series and every race of the 47 sailed except five, losing one to Livonia in 1871, two to Shamrock IV in 1920 and two to Endeavour in 1934.

All losers were British yachts except the Countess of Dufferin in 1876 and the Atalanta in 1881. These were Canadian-owned.

CONSTRUCTION OF RANGER

Ranger was built during the winter months of 1937 by the Bath Iron Works, Bath, Maine. The 110-ton lead keel—heaviest of any cup defender, was molded Dec. 22, 1936. Her steel hull was fashioned by the Carnegie Steel corporation. Mast, boom, and two spinnaker poles are mostly aluminum. The wooden deck is of Oregon white cedar.

Aluminum was used generally throughout in construction, even in the screws of the deck planking. Below deck flooring is of cork. Gas fireplaces are provided for crew.

Sail bins below deck store the huge sails. Sail chutes, similar to coal chutes but more semicircular, send the sails shooting skyward to the 165-foot spar, or crashing back into the hold. All sails are stored in various bins.

Originally equipped with two centerboards, Ranger's forward board shoots out seven feet, nine inches from the tip of her keel. Her much smaller after-board was taken out of the keel at the Bristol yards after the first preliminary series when it was decided that it was unnecessary.

NOTE.—All figures in thousands of dollars. Figures cover fiscal years to and including 1915; calendar years thereafter, except as noted. The Philippine Islands are included with Asia for all years; Turkey in Europe is with Asia beginning 1926; the U.S.S.R. in Asia is with Europe beginning 1924; and Hawaiian Islands are with Oceania prior to 1901. Exports to Northern North America and to Europe adjusted for grain shipments to Canada which were actually in transit to Europe are shown in table 495 of the 1935 Statistical Abstract and the Trade Promotion Bulletins Nos. 198 and 215. Such shipments were especially large in the period 1920-1929 and the year 1933.

IMPORTS AND EXPORTS OF LEADING COUNTRIES, 1940 AND 1941

SAMPLE RATES OF DUTY, IMPORTS INTO THE UNITED STATES, JULY 1, 1944

Source: Bureau of Foreign and Domestic Commerce

Product	Rate of Duty	Product	Rate of Duty	Product	Rate of Duty
Fresh, or frozen beef	4.8c lb.	Raw wool	24c to 37c lb.	Pig lead	2½c lb.
Cream	56.6 gal.	Woolen wearing apparel		Tin ore and bars	Free
Cream	35c gal. Canada	40c to 50c lb. plus 30 to 50%		Zinc ores	1½c lb.
Butter	14c lb.	Raw silk	Free	Zinc blocks, pigs	1¾c lb.
Swiss cheese	7c lb.	Silk manufactures	40% to 90%	Mercury	25c lb.
(35% minimum)		Rayon filaments	45% to 50%	Jewelry	
Sardines	30-44%	(40c to 90c lb. min.)		110%—60 to 65% France	
Crab meat	15%	Rayon fabrics		Electric lamps	20% and 30%
Oysters, lobsters	Free	45c lb. plus 35% to 70%		Electric apparatus	
Eggs	10c doz.	(Some fabrics 90%)		17½% to 40%	
Cattle hides	10%	Straw hats	12½% to 45%	Engines, turbines	15% to 35%
Most other skins	Free	Fur, spruce, cedar logs	Free	Cutting machines	30% to 40%
Leather	12½-30%	Lumber except cabinet		Knitting, carding	
Leather footwear	10-30%	wood	Free to \$3 M ft.	machines	40%
Gloves	45% to \$1.29½ pair	Plywoods	25 to 50%	Printing presses	24%
Other leather goods	15 to 90%	Cork	Free	Agricultural machinery	Free
Undressed furs	Free	Pulpwood, newsprint	Free	Trucks, buses	25%
Dressed furs	25 to 50%	Other paper	20 to 30%	Automobile, bodies	10%
Barley	20c bu.	¾c to 6c lb.		Coal-tar acids	7c lb. plus 40%
Corn	25c bu.	plus 10% to 30%		Fertilizers	Free
Rye	15c bu.	Coal	Free to \$2.24 ton*	Castile soap	15%
Wheat	42c bu.	Petroleum	Free to 21c bbl.*	Toilet soap	30%
Hay	\$5 ton; \$3 ton Canada	Glass, cylinder, crown,		Perfumes containing	
Tamarinds, bananas	Free	sheet	1½c to 2½c lb.	alcohol	40c lb. plus 75%
Nuts	¾c to 25c lb.	Plate glass	12½c to 23c sq. ft.	France, 40c lb. plus 37½%	
Cocoa	3c lb.	Glassware	25% to 85%	Perfumes without	
Coffee, tea	Free	China ware	10c doz.	alcohol	75%—37½% France
Sugar	1.284875c lb. to 1.9875c lb. (Cuba less)	plus 45 to 70%		Cameras	20%
Brandy, gin, rum	\$5 pf. gal.	15% to 70%		Camera lenses	45%
Whiskey, cordials	\$5 pf. gal.	Diamonds, uncut	Free	Photographic films	
Wines	\$1.25 to \$6 gal.	Diamonds, cut	10%	25%—12½% Belgium	
Malt liquors	50c to \$1 gal.	Pearls	10%	Musical instruments	40%
Rubber, unmanufactured	Free	Other precious stones	Free	Rifles	\$10 each plus 55%
Tobacco mfts.		Iron ore	Free	Books in foreign languages	Free
		Pig iron	\$1.12½ ton	Clocks	Varies up to \$4.50 ea.
		Iron, steel scrap	75c ton	plus 65%	
		Steel bars	¾c to 4½c lb.	Art works, statuary	Free
		Cutlery	10c to 45c each	Etchings, engravings	20%
		plus 30% to 60%		Tobacco pipes with wood or	
		Copper ore	Free as flux	root bowls	5c ea. plus 60%
		Scrap copper	4c lb.*	2½c plus 40% France	

*Revenue act.

Note: Many of the above rates have been changed since they were announced, others are only approximate, still others cover the range in which most of the products will be found.

RECIPROCAL TRADE AGREEMENTS

Reciprocal trade agreements have been concluded between the United States and the following countries:

Country	Date Signed	Date Effective	Country	Date Signed	Date Effective
Cuba	Aug. 24, 1934	Sept. 3, 1934	Soviet Russia	Aug. 4, 1937	Aug. 6, 1937
Brazil	Feb. 2, 1935	Jan. 1, 1936	Ecuador	Aug. 6, 1938	Oct. 23, 1938
Belgium	Feb. 27, 1935	May 1, 1935	United Kingdom, Newfoundland and British non-self-governing colonies and certain protectorates and protected states and mandated territories		
Haiti	Mar. 28, 1935	June 3, 1935	Canada (supplement to 1935 agreement)	Nov. 17, 1938	Jan. 1, 1939
Sweden	May 25, 1935	Aug. 5, 1935	Turkey	Nov. 17, 1938	Jan. 1, 1939
Colombia	Sept. 13, 1935	May 20, 1936	Venezuela	April 1, 1939	May 5, 1939
Canada	Nov. 15, 1935	Jan. 1, 1936	Argentina	Nov. 6, 1939	Dec. 16, 1939
Honduras	Dec. 18, 1935	Mar. 2, 1936	Cuba	Oct. 14, 1941	Nov. 15, 1941
Kingdom of the Netherlands (Netherlands in Europe, Netherlands India, Surinam and Curacao)			Peru	Sept. 7, 1942	Aug. 3, 1942
Switzerland	Dec. 20, 1935	Feb. 1, 1936	Uruguay	May 7, 1942	
Nicaragua	Jan. 9, 1936	Feb. 15, 1936	Mexico	July 21, 1942	Jan. 1, 1943
Guatemala	Mar. 11, 1936	Oct. 1, 1936	Iran	Dec. 23, 1942	Jan. 30, 1943
France and its colonies, dependencies and protectorates other than Morocco	April 24, 1936	June 15, 1936	Iceland	April 8, 1943	June 28, 1944
Finland	May 6, 1936	June 15, 1936	Turkey	Aug. 27, 1942	Nov. 19, 1943
Costa Rica	May 18, 1936	Nov. 2, 1936		April 14 and	
El Salvador	Nov. 23, 1936	Aug. 2, 1937		22, 1944	
	Feb. 19, 1937	May 31, 1937			

Note: Supplementary agreements to previous agreements were made with Canada in 1939 and 1942; Cuba, Ecuador, Haiti in 1942; U.S.S.R. in 1942; Argentina and Venezuela in 1941; Cuba, Great Britain and U.S.S.R., in 1940; and Netherlands in 1937.

				Grand Total	\$13,350,000,000

NOTE: These data are taken from a preliminary tabulation of the 220,000 reports filed with the Treasury Department on Form TFR-500. Although the assets reported were all held as of May 31, 1943, the required valuation date varied from August 1, 1939, to May 31, 1943, depending upon the country in which the assets were located and the availability of balance sheet data. The figures are based on the "book, market or estimated" values reported.

The figures, while reasonably accurate as to totals, will be subject to change in geographic details.

*Subsequent to June 21, 1932, certain commodities which had previously been on the free list were made taxable and since that date have been reported as dutiable commodities. The principal commodities affected were petroleum copper, lumber, and coal.

FEDERAL FARM MORTGAGE CORPORATION

Management of the corporation is vested in a board of directors consisting of the secretary of the treasury, or a treasury officer designated by him, the governor of the Farm Credit administration, and the land bank commissioner.

Capital shall be in the sum of \$200,000,000 subscribed by the governor of the FCA on behalf of the United States in such amounts and at such times as he believes necessary.

With the approval of the secretary of the treasury, the corporation is authorized to issue and have outstanding at one time bonds not exceeding in amount \$2,000,000,000.

The corporation may exchange these bonds upon application of any federal land bank, for consolidated farm loans of equal face value issued under the federal farm loan act, and may exchange such consolidated farm loan bonds held by it for bonds of the corporation of equal face value.

The Corporation also can purchase from time to time for cash, consolidated farm loan bonds at prices and terms approved by the board of directors of the corporation to make loans to federal land banks on the security of such consolidated bonds, and to invest its funds in mortgage loans.

*Estimated.

For a precise analysis, the gainful worker figures obtained in some of the censuses prior to 1930 require adjustments to render them comparable with the 1930 figures. These adjustments are required because of changes in the census date and because of minor variations in the instructions to enumerators, or other factors, which led to relative under enumeration or overenumeration of gainful workers, especially in agriculture, in certain years. See the reports of the Fourteenth Census (1920), Volume IV, pp. 18-24; Thirteenth Census (1910), Volume IV, pp. 26-29; Twelfth Census (1900), Special Reports, Occupations, pp. lxx-lxxiii. See also Sixteenth Census (1940), "Comparative Occupation Statistics for the United States, 1870 to 1940," by Dr. Alba M. Edwards.

LABOR'S "GOOD OLD DAYS"

The following are the Employees' Rules which prevailed in the 1880s in the Amboy, Ill. store operated by the founders of Carson, Pirie, Scott & Co., Chicago department store. No similar printed list of rules is in vogue today.

1. Store must be open from 6 A. M. to 9 P. M. the year round.

2. Store must be swept; counters, shelves and showcases dusted; lamps trimmed, filled, and chimneys cleaned; pens made; doors and windows opened; a pail of water and a bucket

of coal brought in, before breakfast. (If there is time to do so, attend to customers who call.)

3. The store must not be opened on the Sabbath unless necessary and then only for a few minutes.

4. The employee who is in the habit of smoking Spanish cigars, being shaved at the barber's, going to dances and other places of amusement, will assuredly give his employer reason to be suspicious of his integrity and honesty.

VITAMIN OIL PRODUCTION IN U. S.

The value of the Domestic Production of vitamin oils in recent years is shown below:

Year	Value	Year	Value	Year	Value
1937	\$2,204,097	1940	\$5,088,153	1943	\$14,841,970
1938	2,476,343	1941	14,871,588	1944	13,300,000
1939	4,471,688	1942	10,371,789		

OFFICERS OF THE AMERICAN FEDERATION OF LABOR 1945

Headquarters: A. F. of L. Building, Washington, D. C.

President: WILLIAM GREEN, Washington, D. C.

First Vice President: WM. L. HUTCHESON, Indianapolis, Ind.

Second Vice President: MATTHEW WOLL, Washington, D. C.

Third Vice President: JOSEPH N. WEBER, Los Angeles, Calif.

Fourth Vice President: G. M. BUGNIAZET, Washington, D. C.

Fifth Vice President: GEO. M. HARRISON, Cincinnati, Ohio.

Sixth Vice President: DANIEL J. TOBIN, Indianapolis, Ind.

Seventh Vice President: HARRY C. BATES, Washington, D. C.

Eighth Vice President: W. D. MAHON, Detroit, Mich.

Ninth Vice President: FELIX H. KNIGHT, Kansas City, Mo.

Tenth Vice President: EDWARD FLORE, Buffalo, N. Y.

Eleventh Vice President: HARVEY W. BROWN, Washington, D. C.

Twelfth Vice President: W. C. BIRTHRIGHT, Indianapolis, Ind.

Thirteenth Vice President: W. C. DOHERTY, Washington, D. C.

Secretary-Treasurer: GEORGE MEANY, Washington, D. C.

Note: On Jan. 30, 1946, John L. Lewis became a member of the AFL Executive Board when his union, the United Mine Workers of America, rejoined the AFL.

CONGRESS OF INDUSTRIAL ORGANIZATIONS

Officers: Philip Murray, president; James B. Carey, secretary-treasurer; R. J. Thomas, Emil Rieve, L. S. Buckmaster, Joseph Curran, Frank Roseblum, Reid Robinson, John Green, Allan S. Haywood, Albert J. Fitzgerald, vice presidents.

The Committee for Industrial Organization (C.I.O.) was organized Nov. 10, 1935, declaring that its purpose was outlined in the minority report of the resolutions committee rejected by a 18,024 to 10,933 vote at the 1935 convention of the American Federation of Labor at Atlantic City, N. J. Significant paragraphs from that report included:

"We declare the time has arrived when common sense demands the organization policies of the American Federation of Labor must be molded to meet present day needs. In the great mass production industries and those in which the workers are composite mechanics, specialized and engaged upon classes of work which do not fully qualify them for craft union membership, industrial organization is the only solution. Continuous employment, economic security and the ability to protect the individual worker depend upon organization upon industrial lines.

"In those industries where the work performed by a majority of the workers is of such nature that it might fall within the jurisdictional claim of more than one craft union or no established craft union, it is de-

clared that industrial organization is the only form that will be acceptable to the workers or adequately meet their needs. Jurisdictional claims over small groups of workers in these industries prevent organization by breeding a fear that when once organized the workers in these plants will be separated, unity of action and their economic power destroyed by requiring various groups to transfer to national and international unions organized upon craft lines."

August 5, 1936, the executive council of the A. F. of L. considered charges that ten unions active in the C.I.O. were engaged in supporting a rival labor organization. These unions were given until September 5, 1936 to sever their connections with C.I.O. or be suspended from the A. F. of L. On the latter date they were suspended. Those unions were:

United Mine Workers of America
Oil Field, Gas Well and Refinery Workers of America
International Union; Mine, Mill and Smelter Workers
United Textile Workers of America
International Ladies' Garment Workers' Union
Federation of Flat Glass Workers
Amalgamated Association of Iron, Steel and Tin Workers
International Union United Automobile Workers of America
United Rubber Workers of America

ADJUSTED EMPLOYMENT STATUS OF THE 1940 LABOR FORCE

The adjustments in the 1940 labor force figures were made for each employment status category separately, by age and sex. Public emergency workers on WPA, CCC,

NYA Out-of-School, or State or local projects who were returned in the census as employed, seeking work, or not in the labor force were subtracted.

SOCIAL SECURITY

Becoming law on Aug. 14, 1935 and amended in 1939, the Social Security Act set up ten separate programs to be administered by federally authorized agencies. Included in the original act were federal-state unemployment insurance; grants in aid to state units for the needy or disabled; federal health, welfare and vocational rehabilitation grants to state institutions; and a federal system of old-age insurance.

The 1939 amendments extended the old-age insurance provisions by liberalizing pensions received by eligible persons and establishing benefit payments to survivors of incapacitated or deceased laborers.

The Children's Bureau of the U. S. Department of Labor, approves grants to individual state units for child health, welfare and maternal services.

Social Security Board

A social security board of three members, appointed by the president and approved by the Senate, administers old-age insurance,

compensation and unemployment provisions of the security act.

During the emergency period the board also administered several emergency programs at the request of the President. These wartime activities extended over the period from Feb. 1942 through June, 1944.

By legislative enactment, the Board, in 1939, became a part of the Federal Security Agency, organized by the President to solve the country's social problems. Today, only the security board and the U. S. Public Health Service remain active in this field. Executive reorganization has, since 1939, transferred the vocational rehabilitation service to a separate Office for Vocational Rehabilitation.

Each of the three Social Security board members serves for six years, one member being appointed every two years. The board is responsible for administering the act, recommending changes in its provisions, and improving its effectiveness.

OLD-AGE AND SURVIVORS' INSURANCE

Only one of the Act's ten programs is administered entirely by the federal government. The remaining provisions of the Act provide only for federal supervision of state activities.

Under the insurance program, monthly benefit payments are made to retired workers and their dependents who meet the requirements for such disbursements.

Based on average monthly wages received by a worker during quarterly periods of three months, the benefit is forty percent of the first \$50 average monthly wage, plus ten percent of the next \$200, added to one percent of the total annual wage. The additional one percent is allotted only when annual wages exceed \$200.

Average monthly wages are computed by dividing the annual wage by the number of working months during which the worker has been covered by the act. All coverage periods begin with 1936.

No coverage period begins until the wage earner reaches the age of 22 years. All benefits are payable after the insured worker has reached the age of 65. (See Table I).

SUPPLEMENTARY BENEFITS

Supplementary benefit payments are given insured persons for family maintenance upon retirement. All dependent children under the age of 18 are considered members of the insured worker's household. In all cases of supplementary benefits, amounts for each family member equal one-half the worker's total benefit payment.

No benefit payments are made to any persons, insured under the act, who earn more than \$15 per month. In cases where the insured has earned more than \$15, eligibility for benefit payments is withheld.

Monthly survivor's benefit payments are made to members of a deceased worker's family. Computation of the benefits follows:

Three-fourths of the total monthly benefit is allotted the widow of the insured providing she is 65 years or over. The age requirement is abolished in those cases where a widow has in her care a dependent child eligible for supplementary payments.

Each unmarried dependent child receives one-half the total benefit payment. Providing there are no immediate survivors in the family, payments amounting to one-half the

total benefit are made to the parents of the deceased wage earner.

Monthly benefit payments under the act range from a minimum of \$10 to a maximum of \$85. No payment can exceed 80 percent of the average monthly wage or double the amount of the benefit payment made to a single wage earner.

Providing no survivors can be found within the immediate family, a lump sum payment equal to six times the average monthly benefit for which the deceased is eligible, is paid to relatives. In such cases, the lump sum payment is made to the party or parties defraying the costs of burial.

CONTRIBUTIONS

Contributions under this section of the act are made by both employers and employees. Each party contributes an amount equal to one percent of the wage earner's monthly wages. The act provided a scale of 1937-39, 1%; 1940-42, 1.5%; 1943-1945, 2%; 1946-48, 2.5%; 1949 and thereafter, 3%. All contributions are disbursed by the Federal Old-Age and Survivors Insurance Trust Fund, a sub-division of the federal treasury, established by amendments to the act in 1939. The Trust Fund is supervised by a board of trustees. Board members are Secretary of the Treasury, Secretary of Labor and the Chairman of the three man Social Security board.

Contributory rates for both employers and employees, have been kept at 1% by annual legislation of Congress, the last law continuing the 1% rate to Dec. 31, 1946.

Wage earners do not receive payments based on income in excess of \$3000 in any one year.

UNEMPLOYMENT PROVISIONS

Cooperation between federal and state governments to solve unemployment problems is provided through the unemployment compensation provisions of the Social Security Act. Two methods of implementing the compensation system have been devised. The first provides for federal grants in aid to states for amounts equal to the costs of administering a state supervised unemployment compensation program. The second method allows employers credit deductions against the Federal unemployment tax for contributions made to a state unemployment fund.

SOCIAL SECURITY (Continued)

The unemployment tax is a federal excise levied against the pay rolls of employers employing eight or more persons. The total annual levy amounts to three percent of the total wages, under \$3,000, paid to a single employee during a 12 months period.

Exemptions from this tax levy include charitable, religious and educational organizations not organized for profit; domestic service; casual labor; maritime services; services for foreign countries; insurance workers and agricultural labor.

Those employers subject to the Federal unemployment tax are allowed credit for 90 percent of their contributions to state unemployment funds. Federal control over state unemployment activities is limited to the formulation of minimum standards as guides for the creation of state unemployment systems.

All states and territories have complied with these standards since July 31, 1937 and now are receiving federal assistance.

Today, every state in the union pays unemployment benefits of varying amounts. More than 45,000,000 persons received benefit payments in 1944, according to the Social Security board.

PUBLIC ASSISTANCE

The Security Act also authorizes grants in aid to states for assistance to the aged, dependent children, and the blind. Each grant must be matched by a like sum allotted from state funds. All public assistance programs are under the supervision of state governments. The Social Security board must approve all such plans.

Prosperous conditions during the emergency period have contributed to decrease the number of persons receiving public assistance. Higher family incomes, service allotments and new job opportunities were important factors precipitating this decrease in public aid.

OLD-AGE ASSISTANCE AND ALLIED GRANTS

Recipients of old-age assistance and blind pensions can receive no more than \$40 per month. Today, every state has old-age pension laws and all but four have blind pension legislation.

Aid to dependent children is also on a federal-state basis. Each recipient is entitled to a maximum of \$18 per month for the first child and \$12 for each additional child.

Nevada is the only state without a program for aid to dependent children.

MONTHLY OLD-AGE INSURANCE BENEFITS¹

Years of insured workers coverage	Single Married ²		Single Married ²		Years of insured workers coverage	Single Married ²		Single Married ²	
	Av. monthly wage of \$50 ³		Av. monthly wage of \$100			Av. monthly wage of \$150		Av. monthly wage of \$250	
3	\$20.60	\$30.90	\$25.75	\$38.63	3	\$30.90	\$46.35	\$41.20	\$61.80
5	21.00	31.50	26.25	39.38	5	31.50	47.25	42.00	63.00

¹It is assumed that an individual earns at least \$200 in each year of coverage. If this were not the case, the benefit would be somewhat lower.

MEN AS SUBJECTS FOR BOOKS

Only Christ and Napoleon have inspired more books than Abraham Lincoln, according to the Illinois State Historical Library.

USE OF WOOD IN CANDY MAKING

In the production and marketing of confections in the United States of the type to attract children, such as lollipop sticks, and ice creams and other sweets mounted on small wooden sticks, it is estimated that upward of 3,000 cords of wood are used annually. This lumber is equivalent to about

18,000 ordinary forest trees. It is claimed Over one billion small pieces of wood with confections attached are distributed throughout the United States annually, among an estimated 20,000,000 children between the ages of 5 and 14 years, so popular has become this form of merchandising sweets.

FAIR LABOR STANDARDS ACT OF 1938

The Fair Labor Standards Act of 1938 was enacted by Congress to prevent the use of channels of interstate commerce to spread and perpetuate labor conditions detrimental to the health, efficiency and well-being of workers and to wipe out unfair methods of competition based on such labor conditions.

Wage and hour provisions of the law apply to workers engaged in interstate commerce or in the production of goods for in-

terstate commerce. No worker may be paid less than 40 cents per hour (effective October 24, 1945.)

Maximum hours which a laborer can work at regular rate of pay is 40 per week. Each worker must be paid at the rate of at least one and one-half times his regular rate of pay for all hours worked over 40 per week. There may be no "averaging" of workweeks. Time lost one week cannot be made up the next unless time and a half is paid.

The Act does not require that employers pay on an hourly basis. Any method of payment can be used so long as it satisfies the requirements of the Act.

Employers covered by any provisions of the Act must keep records, though no definite form is required. Records must be kept for four years and be open for inspection by government officials of the Wage and Hour Divisions, Department of Labor.

Child labor provisions of the Act prohibit shipment or delivery for shipment in interstate commerce of any goods produced in establishments in or about which "oppressive child labor" has been employed within 30 days prior to the removal of the goods. "Oppressive child labor" is employment of children under 16, or employment of children between 16 and 18 years of age in occupations declared hazardous or detrimental to health and well-being.

The following are exempt from the child labor provisions of the Act; children employed in agriculture while not legally required to attend school, children employed as actors in motion pictures or theatrical productions, children under 16 who are employed by their parents, or persons standing in place of parents, in occupations other than manufacturing or mining.

The following are exempted from both wage and hour provisions of the Act: 1, Employees engaged in a bona fide executive, administrative, professional, or local retailing capacity, or in the capacity of outside salesmen; 2, employees in any retail or service establishment, the greater part of whose selling or servicing is in intrastate commerce; 3, seamen or agricultural workers, employees of small telephone exchanges, those engaged in sea food and fishing industry, employees of airlines, street, suburban and interurban railways, local trolleys or local motor-bus carriers, or weekly or semiweekly newspapers with a circulation of less than 3,000 the major part of which is in the county of publication; and 4, persons employed within the area of production en-

gaged in packing, storing, ginning, canning, or pasteurizing agricultural commodities for market or making dairy products.

The following are exempt only from the hours provisions of the Act: employees of railway or motor carriers which are regulated by the Interstate Commerce Commission, and employees of employers engaged in the first processing of milk into dairy products, ginning of cotton, processing of cottonseed, processing of sugar beets, sugarbeet molasses, sugarcane, or maple sap into raw sugar or syrup.

The following are exempt from the maximum hour provisions: employees in seasonal industries, employees of employers engaged in the first processing, canning, or packing of fresh fruits and vegetables, in the first processing in the area of production of agricultural commodities during seasonal operations, or in handling, slaughtering, or dressing poultry or livestock; and employees working under agreement, made as the result of collective bargaining.

Employees may bring suits themselves or through an agent in any court of competent jurisdiction to recover unpaid minimum wages or unpaid overtime compensation. Employers violating the wage and hour requirements are liable for double the unpaid sums plus court costs and reasonable attorney's fees.

The Federal Government may also prosecute criminally for violations of the Act. Upon conviction, the employer may be fined up to \$10,000, or, in the case of a second conviction, may be imprisoned up to six months.

It is unlawful not only to produce goods for interstate commerce, but also to ship, deliver, or sell in interstate commerce goods so produced. This is the "hot goods" provisions. Any person violating, or found possessing such goods, may be restrained by injunction from shipping them in interstate commerce. He may also be subject to criminal prosecutions.

During 1935 the Bureau changed its method of combining average retail food prices by titles including a revision of consumption weights and the use of population weighting factors.

The 1925 and later figures are on the new plan and therefore are not strictly comparable with those of previous years.

Washington	One year	x	x	x	x	x	9	6 months	6 months
West Virginia	One year ¹	x	x	x	x	x	6	Sixty days	Sixty days
Wisconsin	Two yrs. ⁴	x	x	x	x	x	7	One year	One year
Wyoming	Sixty days	x	x	x	x	x	13	Immediately	Immediately

¹ Longer in certain cases. ² Shorter in certain cases. ³ Or bona fide residence since cause of action arose. ⁴ Five years in insanity cases. ⁵ One year for cause arising in state. ⁶ Parties must have married in the state or resided there when the offense was committed. ⁷ Two years for insanity. ⁸ One divorced for adultery may not marry the paramour, but there are exceptions to this rule in Mississippi, Pennsylvania and Tennessee. Special restrictions against remarriage exist in South Dakota, West Virginia and Virginia. ⁹ Court may restrain defendant from remarrying; up to two years in Michigan; up to five years in West Virginia (when case is not on grounds of adultery).

PETSAMO HARBOR FREE OF ICE

The deep harbor at Petsamo, Finland, 200 miles north of the Arctic Circle, is always free of ice because of the Gulf stream. The coastal temperature is higher than in the interior.

NUMBER OF MARRIAGES AND MARRIAGE RATE PER 1,000, BY STATES: 1937 TO 1943

(Rates are based on estimate of population for States reporting, as of July 1 for all years. Rates for 1940 differ, therefore, from rates previously published which were based on the enumerated population as of April 1, 1940)

PROPER FOOD EXPENDITURES

Source: U. S. Department of Agriculture

If families with children purchase their food so as to provide a properly balanced diet, each food dollar will be spent approximately as follows:

One-fourth for milk and cheese, 25 cents.
One-fourth for fruits and vegetables, 25 cents.

One-seventh for lean meat, fish and eggs, 15 cents.

One-fifth for bread, flour and cereals, 20 cents.

One-seventh for fats, sugars and accessories, 15 cents.

COURT PROCEDURE AND TERMINOLOGY

Preliminary Hearing: Arraignment of arrested person in minor court of limited jurisdiction which disposes of case if within its power or binds over (refers) matter to grand jury or prosecuting attorney of higher court if it hasn't power but believes there are reasons to suspect guilt.

Habeas Corpus: Court writ requiring a person in custody to be brought to court and formally charged.

Warrant: Court writ commanding arresting officer to bring in person accused. A **search warrant** permits search of premises. A **bench warrant** or **capias** is issued by a judge for arrest of persons, not already in custody, after grand jury indictment.

Bail Bond: Money or security placed with court to obtain release from jail of one awaiting trial. It is forfeited if he fails to appear.

Grand Jury: Body of citizens, chosen by lot, which hears *ex parte* (only one side) evidence to determine whether person accused of crime should stand trial. An **indictment** in the form of a **true bill** is a grand jury order that such shall happen. A **presentment** is similar to an indictment except that in its case the grand jury takes initiative in gathering the evidence. In some states **informations** are replacing indictments; they are filed by prosecuting attorney under oath ordering accused to trial.

John Doe Hearing: Held by prosecuting attorney when names of persons connected with a crime are unknown, in attempt to determine against whom there should be indictments or informations.

Petit Jury: Body of 12 citizens constituting trial jury. Before selection from a **panel** prepared by jury commissioners they are known as **veniremen**; if original panel is exhausted additional persons examined are called **talesmen**. During examinations attorneys for both sides are permitted unlimited **challenges for cause** when potential jurors obviously are unqualified and a limited number of **peremptory challenges** without reasons given.

Defense Motions: Before a criminal trial gets under way the defense may make any of a number of motions to end or delay it. Such pleas include: **quash the indictment**, an attack on the legal form of the true bill or the manner in which the grand jury was picked; **plea in abatement**, charges something illegal in process of obtaining indictment; **demurrer**, contends that offense charged does not constitute a crime or that it occurred so long ago as to be outlawed by the **statute of limitations**; **bill of particulars**, asks a more definite statement of the charges; **former jeopardy**, charges defendant already has been tried for the same offense; **plea to the jurisdiction**, asks a **change of venue** (transference to a different court) or a different judge; **continuance**, request for a delay; **nolo contendere**, signifies intention not to fight case but not tantamount to confession of guilt; **severance**, when two or more defendants are named in same indictment one may seek a separate trial; **insanity**, some states permit the plea "not guilty because insane."

Nolle prosequi, or *nol pros*, is a motion which prosecuting attorney may make to drop the charges and stop trial.

Trials: Ordinary steps in a criminal trial are: (1) selection and swearing in of jurors; (2) prosecuting attorney's opening statement; (3) direct examination of witnesses by prosecuting attorney, the first ones to prove

the **corpus delicti**, or fact that a crime was committed; (4) cross examination of plaintiff witnesses by the defense; (5) opening statement of the defense; (6) direct and cross examination of defense witnesses; (7) rebuttal witnesses for plaintiff; (8) final pleas by defense and plaintiff; (9) judge's charge to the jury; (10) deliberation and verdict by the jury; (11) sentence by the judge. Witnesses are summoned by court orders called **subpoenas** requiring their attendance; a **subpoena duces tecum** requires a witness to bring designated documents or other articles with him. In case of the forced absence of a witness an authorized court officer may obtain his testimony under oath which is submitted in the form of a **deposition**. Depositions taken in foreign countries are called **letters rogatory**. Anyone arrested in one state may be returned to another, where he is wanted to answer charges of a crime, provided **extradition** papers are requested by the governor of the latter state and granted by the governor of the former. If a jury reaches a decision at night or another time when the court is not in session it may sign and leave a **sealed verdict** with a court officer to be opened in court later.

Civil Actions: They begin with a **complaint** or **bill of petition** or **declaration** stating a grievance or with a non-committal **præcipe**, permitted in some states, after which a **writ of summons** is served on an adverse party. The defendant has a certain time to file an **answer** or **reply** or may file an **appearance**, which indicates his intention of making an answer later. **Pleadings** are papers containing charges, answers and counter-charges filed in court prior to opening of trial. Some states limit their number through a system of **code pleading**. At the end of plaintiff's testimony in civil, and in some criminal trials, defendant may move for **nonsuit**, a **directed verdict** or may **demur** to the evidence, claiming prosecution has not made a case. A jury in a civil case finds for either side and a **judgment** is entered following the verdict. A **decree** is a judge's decision in equity suits and may be (1) final; (2) **interlocutory**, becoming final after a lapse of time or performance of some act; (3) **nisi**, becoming final, unless reason is shown during a certain interval why it should not; (4) **pro confesso**, favoring plaintiff because of failure of defendant to reply; (5) **consent**, when parties make outside agreement which court approves. A decree is **executed** when its provisions are carried out. An **ancillary action** is one growing out of another as when it is necessary to bring suit to obtain action on a judgment. An **intervening action** may be brought by a third party to become a part of a suit, either as plaintiff or defendant. A **cross suit** occurs when a defendant not only answers a plaintiff but makes charges himself. A **respondent** is the person who answers a civil suit; a **co-respondent** is a third party mentioned in a suit but not a party to it.

A **tort** is a legal wrong done independently of a contract. **Trover** is the conversion of personal property. A **replevin** suit is to recover specific property rather than compensation for its loss.

Wills: A person dies **testate** when he leaves a will, **intestate** when there is no will. The **probate court** appoints an **executor** named in a will or an **administrator**, if there is no will, to carry out its provisions and issues him **letters testamentary** to author-

ize his work. A will is **filed for probate** as soon as possible and **admitted to probate** by court order after a certain lapse of time and performance of necessary functions to settle the deceased's affairs.

Appeals: Motions for **new trials** must be made immediately after jury verdicts; the defeated party has some time to file an **assignment of errors** on which motion is based. If the new trial is refused there may be appeal to a higher court by means of a **writ of error** in criminal cases or an **appeal** in civil cases. The dissatisfied party is the **appellant** and the other party the **appellee**; the former files a **brief** with the higher court and the latter answers; a **record or transcript** of the lower court trial is submitted. If the higher court consents to hear the case it also hands down a verdict in the form of a **majority opinion**; there also may be **concurring opinions** written by judges not assigned to write the majority view, and **dissenting opinions**. An **obiter dictum** is a part of an opinion which does not relate particularly to the case in hand.

Extraordinary Remedies: With the exception of **injunction** the following writs are issued only by higher courts; (1) **injunction**, forbidding an individual or corporate action, issued as a temporary order on ex parte evidence and dropped or made permanent after hearing; (2) **mandamus**,

directed to administrative officials, corporations or lower courts to perform an act required by law; (3) **prohibition**, the counterpart of mandamus, forbidding the commission of an act; (4) **quo warranto**, inquiring into the right of a public or corporation official to hold office; (5) **certiorari**, an order of a higher to a lower court to submit a certified record of a case for possible review; (6) **supersedeas**, suspends execution of a verdict during appellate proceedings.

Sentences: a **suspended sentence** is not served during good behavior; a person convicted simultaneously of more than one offense may serve a **cumulative sentence** (the total of all sentences) or a **concurrent sentence** (the longest). An **indeterminate sentence** fixes imprisonment as "not less than" and "not more than" given number of years.

Leniency: a convicted person may be placed on **probation** during the term of his sentence, being at liberty but required to report at intervals to a probation officer; he may be released on **parole** under supervision after serving a portion of his sentence; a **commutation** is the reduction by a governor of a penalty to a lesser one, as life imprisonment instead of death; a **reprieve** is the delaying of an execution by executive order; a **pardon** is the unconditional release of a prisoner by executive order.

OFFENSE CLASSIFICATIONS

Source: Federal Bureau of Investigation, Department of Justice

1. **Criminal homicide.**—(a) Murder and nonnegligent manslaughter includes all wilful felonious homicides as distinguished from deaths caused by negligence. Does not include attempts to kill, assaults to kill, suicides, accidental deaths, or justifiable homicides. Justifiable homicides excluded from this classification are limited to the following types of cases: (1) The killing of a felon by a peace officer in line of duty; (2) The killing of a hold-up man by a private citizen. (b) Manslaughter by negligence includes any death which the police investigation establishes was primarily attributable to gross negligence on the part of some individual other than the victim.

2. **Rape.**—Includes forcible rape, statutory rape (no force used—victim under age of consent), assault to rape, and attempted rape.

3. **Robbery.**—Includes stealing or taking anything of value from the person by force or violence or by putting in fear, such as strong-arm robbery, stick-ups, robbery armed. Includes assault to rob and attempt to rob.

4. **Aggravated assault.**—Includes assault with intent to kill; assault by shooting, cutting, stabbing, maiming, poisoning, scalding, or by the use of acids. Does not include simple assault, assault and battery, fighting, etc.

5. **Burglary—breaking or entering.**—Includes burglary, housebreaking, safe-cracking, or any unlawful entry to commit a felony or a theft, even though no force was used to gain entrance. Includes attempts. Burglary followed by larceny is included in this classification and not counted again as larceny.

6. **Larceny—theft** (except auto theft).—(a) Fifty dollars and over in value; (b) under \$50 in value—includes in one of the above subclassifications, depending upon the value of the property stolen, thefts of bicycles, automobile accessories, shoplifting, pocket-picking, or any stealing of property or article of value which is not taken by force and violence or by fraud. Does not include embezzlement, "con" games, forgery, worthless checks, etc.

7. **Auto theft.**—Includes all cases where a motor vehicle is stolen or driven away and abandoned, including the so-called joy-riding thefts. Does not include taking for temporary use when actually returned by the taker, or unauthorized use by those having lawful access to the vehicle.

8. **Other assaults.**—Includes all assaults and attempted assaults which are not of an aggravated nature and which do not belong in class 4.

9. **Forgery and counterfeiting.**—Includes offenses dealing the making, altering, uttering, or possessing, with intent to defraud, anything false which is made to appear true. Includes attempts.

10. **Embezzlement and fraud.**—In-

cludes all offenses of fraudulent conversion, embezzlement, and obtaining money or property by false pretenses.

11. **Stolen property; buying, receiving, possessing.**—Includes buying, receiving, and possessing stolen property as well as attempts to commit any of those offenses.

12. **Weapons; carrying, possessing, etc.**—Includes all violations of regulations or statutes controlling the carrying, using, possessing, furnishing, and manufacturing of deadly weapons or silencers and all attempts to violate such statutes or regulations.

13. **Prostitution and commercialized vice.**—Includes sex offenses of a commercialized nature, or attempts to commit the same, such as prostitution, keeping bawdy house, procuring, transporting, or detaining women for immoral purposes.

14. **Sex offenses** (except rape and prostitution and commercialized vice).—Includes offenses against chastity, common decency, morals, and the like. Includes attempts.

15. **Offenses against the family and children.**—Includes offenses of nonsupport, neglect, desertion, or abuse of family and children.

16. **Narcotic drug laws.**—Includes offenses relating to narcotic drugs, such as unlawful possession, sale, or use. Excludes Federal offenses.

17. **Liquor laws.**—With the exception "drunkenness" (class 18) and "driving while intoxicated" (class 22), liquor law violations, State or local, are placed in this class. Excludes Federal violations.

18. **Drunkenness.**—Includes all offenses of drunkenness or intoxication.

19. **Disorderly conduct.**—Includes all charges of committing a breach of the peace.

20. **Vagrancy.**—Includes such offenses as vagabondage, begging, loitering, etc.

21. **Gambling.**—Includes offenses of promoting, permitting, or engaging in gambling.

22. **Driving while intoxicated.**—Includes driving or operating any motor vehicle while drunk or under the influence of liquor or narcotics.

23. **Violation of road and driving laws.**—Includes violations of regulations with respect to the proper handling of a motor vehicle to prevent accidents.

24. **Parking violations.**—Includes violations of parking ordinances.

25. **Other violations of traffic and motor vehicle laws.**—Includes violations of State laws and municipal ordinances with regard to traffic and motor vehicles not otherwise provided for in classes 22–24.

26. **All other offenses.**—Includes all violations of State or local laws for which no provision has been made above in classes 1–25.

27. **Suspicion.**—This classification includes all persons arrested as suspicious characters, but not in connection with any specific offense, who are released without formal charges being placed against them.

DEFINITIONS

The difference between a **felony**, a serious offense, and a **misdemeanor**, a milder offense, is determined by statute. Usually a felony is punishable by imprisonment in a state penitentiary whereas a misdemeanor is punishable by fine or imprisonment in a local jail.

Substantive law defines what constitutes

criminal action; **adjective law** defines legal or court proceedings.

Statute law is that passed by a law-making body; **common law** is based on custom and legal or judicial precedent.

Cases in **law** pertain to compensatory proceedings; cases in **equity** pertain to compulsory and preventive proceedings.

*Average population includes 301 for McNeil prison camp which was opened June 7, 1943, and 63 for Columbia prison camp which was opened Feb. 1, 1944. Both populations were computed on basis of entire fiscal year. Total sentenced inmates handled during turnover in 1944 were 28,873.

AWARDS AND PRIZES

THE NOBEL PRIZES

By the will of Alfred B. Nobel, Swedish inventor of dynamite, a fund of \$9,200,000 was set aside from which money awards were to be made to persons who, in the fields of chemistry, physics, physiology and medicine, literature and peace, had made the greatest contributions toward the progress of the world and the welfare of humanity. The prizes range from \$30,000 to \$60,000.

The awards in chemistry and physics are made by the Royal (Swedish) Academy of

Sciences; those in medicine and physiology by the Caroline Institute (the faculty of medicine in Stockholm); those in literature by the Swedish Academy, and those in peace by a committee of five selected by the Norwegian Storting. Fifteen members of these bodies are deputies of the board of directors which, with the president, appointed by the Swedish government, is in charge of the fund. The prizes are awarded on the anniversary of Mr. Nobel's death, Dec. 10, 1896.

Literature

Year	Winner	Country	Year	Winner	Country
1901	Rene F. A. Sully Prudhomme	France	1920	Knut Hamsun	Norway

INVENTED BIFOCALS

At the age of 78 years Benjamin Franklin invented bifocal spectacles for his convenience in near and far seeing, according to the

Better Vision institute. Previously he had worn ordinary eye-glasses for 25 years.

PULITZER PRIZES

To the authors of the best works in various journalistic fields during the previous year, the trustees of Columbia university award what are known as the Pulitzer prizes. The prizes are made from a fund which the late Joseph Pulitzer left to Columbia university, New York City, School of Journalism which he also founded, and are announced at the annual dinner in May of the alumni of the School of Journalism.

1945 Aaron Copland

GEORGE FOSTER PEABODY RADIO AWARDS

The George Foster Peabody Radio Awards (established 1940 to perpetuate the memory of George Foster Peabody, benefactor and life trustee of the University of Georgia) are designed to give recognition to meritorious service by broadcasters.

1940

Public Service (network)—CBS, (large station), WLW, Cincinnati, O.; (medium sized station), WGAR, Cleveland, O.; (small station), KRFU, Columbia, Mo., **News Reporting**, Elmer Davis.

1941

News reporting, Cecil Brown, CBS; **Drama**, "Against the Storm" by Sandra Michael and John Gibbs, and "The Bill of Rights" by Norman Corwin; **Music**, Alfred Wallenstein, Mutual Broadcasting System; **Educational**, Chicago Round Table of the Air, NBC; **public service by stations**, International Short Wave Broadcaster.

1942

News Reporting, Charles Collingwood, CBS; **Drama**, "The Man Behind the Gun," CBS; **Music**, The Standard Symphony, NBC, Pacific Coast Network; **Educational**, "Afield with Ranger Mac," WHA, Madison, Wis. **Public Service by local station**, "Our Hidden Enemy—Venereal Diseases," KOAC, Corvallis, Ore.; regional station, "The Home Front," WCHS, Charleston, W. Va.

1943

News reporting, Edward R. Murrow, CBS; **Music**, Salt Lake City Tabernacle Choir, KSL; **Educational**, "America's Town Meeting," CBS; **Children**, "Let's Pretend," CBS; **Community Services**, KNX, KYA, **Drama**, Lux Radio Theatre, CBS; An Open Letter to the American People, CBS.

1944

News Commentary, Raymond Gram Swing, Blue Network, American Broadcasting Co; **News Reporting**, WLW Cincinnati, Ohio, **Music**, Telephone Hour, NBC; **Educational**, Human Adventure, MBS; **Children**, Philharmonic Young Artists Series, KFI, Los Angeles, Calif.; **Special Award**, Col. Edw. M. Kirby, Chief Radio Branch, War Department, Washington, D. C.; **Public Service by Regional Station**, Worcester and the World, WTAG, Worcester, Mass.; **Public Service by a Local Station**, double award—first, WNYC, New York City, and Mayor Fiorella LaGuardia; second, WIBX, Utica, N. Y., "Cross-Roads"; **Regional Citation Winners**, KOIN, Portland, Oregon, "Song of the Columbia"; WFBF, Syracuse, New York, "Syracuse on Trial"; KVOO, Tulsa, Oklahoma, "Southwest Forum"; KMOX, St. Louis, Missouri, "St. Louis Speaks"; **Drama**, "Cavalcade of America" NBC; **Special Award**, Fred Allen, CBS.

THE AMERICAN INSTITUTE OF ARCHITECTS

Headquarters: 1741 New York Avenue, Washington, D. C.

The gold medal of the American Institute of Architects is the highest award of the institute. Established in 1906, the medal has been awarded to the following:

1906 Sir Aston Webb
1909 Charles F. McKim
1911 George B. Post
1913 Jean Louis Pascal
1921 Victor Laloux
1922 Henry Bacon
1924 Sir Edwin Landseer Lutyens
1925 Bertram Grosvenor Goodhue
1927 Howard Van Doren Shaw
1929 Milton Bennett Medary
1933 Ragnar Ostberg

The Craftsmanship medal was established in 1915. The gold medal is awarded for achievement in the crafts having to do with individual workmanship in metals, stone, wood, pottery and textiles. Awards have been:

1919 Henry C. Mercer
1920 Samuel Yellin
1922 Frederick W. Goudy
1925 Charles Jay Connick
1926 V. F. Von Lossberg

1927 Frank J. Holmes
1928 William D. Gates
1929 The Cheney Brothers
1930 John Kirchmayer
1931 Leon V. Solon
1934 Walter W. Kantack
1936 John J. Earley

The Fine Arts medal is awarded for distinguished achievement in the fine arts: painting, sculpture, music and literature. Awards have been made to:

1921 Paul Manship, sculpture
1922 Arthur F. Mathews, painting
1925 John Singer Sargent, painting
1926 Dr. Leopold Stokowski, music
1927 Lee Lawrie, sculpture
1928 H. Siddons Mowbray, painting
1929 Diego Rivera, painting
1930 Adolph Alexander Weinman, sculpture
1931 Frederick Law Olmsted, landscape architecture
1934 James Henry Breasted, literature
1936 Robert Edmond Jones, design
1938 Paul Philippe Cret
1943 Louis Henri Sullivan (posthumous)

THE KOBER MEDAL

Source: Association of American Physicians

The George M. Kober medal is awarded annually by the Association of American Physicians to one of its members who has gained international recognition through his contribution to medicine. Recent awards follow:

1925	Hideyo Noguchi, New York City
1926	Theobald Smith, Princeton, N. J.
1927	William H. Welch, Baltimore
1928	Victor C. Vaughan, Ann Arbor
1929	George R. Minot, Boston
1930	James B. Herrick, Chicago
1931	Henry Sewall, Denver
1932	E. P. Joslin, Boston
1933	A. N. Richards, Philadelphia.
1934	J. J. Abel, Baltimore
1935	Frank B. Mallory, Boston

1936	E. R. Baldwin, Saranac Lake, N. Y.
1937	William H. Park, New York City
1938	Rufus Cole, New York City
1938	Rufus Cole, Mount Kisco, N. Y.
1939	George H. Whipple, Rochester, N. Y.
1940	F. F. Russell, Boston, Mass.
1941	William de B. MacNider, Chapel Hill, N. C.
1942	D. D. Van Slyke, New York, N. Y.
1943	No annual meeting held; award carried over to 1944 meeting.
1944	Ernest W. Goodpasture, Nashville, Tenn.
1945	No annual meeting held; award carried over to 1946 meeting.
1946	Oswald T. Avery, New York, N. Y.

SPINGARN MEDAL AWARDS

The Spingarn medal was instituted in 1914 by the late J. E. Spingarn, then chairman of the board of directors of the National Association for the Advancement of Colored People. The gold medal is awarded annually to the American Negro who in the preceding year or years has made the highest achievement in any honorable field of human endeavor.

Awards have been:

1915	Prof. E. E. Just, head of the department of physiology of Howard University Medical school
1916	Maj. Charles Young, U. S. Army
1917	Henry T. Burleigh, composer, pianist, singer
1918	William Stanley Braithwaite, poet, literary critic and editor
1919	Archibald H. Grimke, president, American Negro academy
1920	William E. Burghardt Du Bois, author, editor of The Crisis
1921	Charles S. Gilpin, actor
1922	Mary B. Talbert, former president of the National Association of Colored Women
1923	George W. Carver, head of the department of research and experimental station, Tuskegee institute
1924	Roland Hayes, singer
1925	James Weldon Johnson, former U. S. consul in Venezuela and Nicaragua
1926	Carter G. Woodson, author, Negro Orators and their Orations; Free Negro Heads of Families in the United States in 1830

1927	Anthony Overton, Chicago business man and banker
1928	Charles W. Chestnutt, novelist
1929	Mordecai Wyatt Johnson, president of Howard university
1930	Henry A. Hunt, principal of Fort Valley High and Industrial school, Fort Valley, Ga.
1931	Richard Berry Harrison, the "Lord" in The Green Pastures , by Marc Connelly
1932	Maj. Robert R. Moton, Tuskegee institute
1933	Max Yergan, missionary among native students of South Africa
1934	William Taylor Burwell Williams, dean of Tuskegee institute
1935	Mrs. Mary McLeod Bethune, founder and president, Bethune-Cookman college, Daytona Beach, Fla.
1936	John Hope, president, Atlanta university (Presented posthumously)
1937	Walter White, secretary, National Association for the Advancement of Colored People
1938	Marian Anderson, contralto
1939	Louis T. Wright, surgeon
1940	Richard Wright, author
1941	A. Philip Randolph, labor leader
1942	Judge William Henry Hastie, jurist
1943	Dr. Charles R. Drew, professor of surgery at Howard University college of medicine
1944	Paul Robeson, actor, concert artist and athlete

W. A. CLARK ART AWARDS

The W. A. Clark Art awards were established in 1908 through a trust fund of \$100,000 set up by the late Senator W. A. Clark to honor the works of American artists.

Each year four prizes ranging from \$2,000

to \$500 are awarded for the best painting on any subject meeting with the approval of the Corcoran Gallery in Washington, and the fund's trustees.

Since 1907 the winners have been:

Exhibition	Winner	Exhibition	Winner
Second	1908-09 Edward W. Refield	Eleventh	1928 Bernard Karfiol
Third	1910-11 Edmund C. Tarbell	Twelfth	1930-31 Maurice Sterne
Fourth	1912-13 Childé Hassam	Thirteenth	1932-33 George Luks
Fifth	1914-15 J. Alden Weir	Fourteenth	1935 Eugene Speicher
Sixth	1916-17 Arthur B. Davies	Fifteenth	1937 Edward Hopper
Seventh	1918-19 Frank W. Benson	Sixteenth	1939 Franklin C. Watkins
Eighth	1920-21 Daniel Garber	Seventeenth	1941 John Edward Heliker
Ninth	1922-23 George Bellows	Eighteenth	1943 Henry Mattson
Tenth	1926 Charles W. Hawthorne	Nineteenth	1945 Reginald Marsh

 "The Apostle," by Sholem Asch, total printings of 554,724 copies

"I Never Left Home," by Bob Hope, 1,469,000 copies
 "Brave Men," by Ernie Pyle, 229,237 copies exclusive of book clubs
 "Good Night, Sweet Prince," by Gene Fowler, 161,696 copies
 "Under Cover," by John Roy Carlson, 132,340 copies
 "Yankee from Olympus," by Catherine Drinker Bowen, 103,706 copies
 "The Time for Decision," by Sumner Welles
 "Here Is Your War," by Ernie Pyle, 83,875 copies
 "Anna and the King of Siam," by Margaret Landon
 "The Curtain Rises," by Quentin Reynolds, 60,000 copies
 "Ten Years in Japan," by Joseph C. Grew, 59,000 copies

SMALLEST BOOK IN THE WORLD

The Bodleian library of Oxford, England, has laid claim to possessing the smallest book in the world, a privately printed translation of the chief parts of the Rubaiyat of Omar Khayyam from the Commonwealth Press of Worcester, Mass.

The volume measures one-fourth of an inch in height and three-sixteenths of an

inch in width. It contains 34 pages, the size of the text on each page being three thirty-seconds of an inch by five thirty-seconds of an inch. The setting of the type was so delicate an operation that it had to be done at night when the vibration of traffic and office machinery had ceased.

NATIONAL GEOGRAPHIC SOCIETY

(Prepared for the National Almanac by an official of the Society)

The National Geographic Society, of which Dr. Gilbert Grosvenor is President, was founded in 1888 for "the increase and diffusion of geographic knowledge." The first of these objects has been achieved by expeditions either under its own auspices or in cooperation with other agencies. It has diffused geographic knowledge by the publication of the National Geographic Magazine and a long list of technical papers, maps, memoirs, and books. It also maintains a geographic news service for the press and supplies the schools with weekly geography lessons which go to 35,000 classrooms. The Society has a membership of 1,250,000 which has grown from fewer than 1,000 in 1899.

Outstanding researches of the Society have included studies of Alaska with emphasis on its glaciers; the excavation of the ancient city of Machu Picchu in Peru and of Pueblo Bonito, built by a vanished race of Indians in New Mexico; the establishment in cooperation with Dr. Andrew E. Douglass of a "tree-ring calendar" reaching back to 700 A. D.; the study of the great eruption of Mount Katmai and the discovery of the near-by Valley of Ten Thousand Smokes on the Alaska Peninsula. Other activities have included the assembling of natural history and photographic collections by Joseph Rock in China; the first exploration of Carlsbad Cavern, New Mexico; the support of Robert E. Peary in his expeditions leading to the discovery of the North Pole and of Richard E. Byrd in his explorations to both Poles; and the cooperation with the Citroen-Haardt trans-Asia expedition.

In 1934, the Society in cooperation with the National Zoological Society, made deep-sea explorations under the leadership of Dr. William Beebe by means of a heavy steel ball, the Bathysphere. A world-record depth of 3,028 feet was reached. In the same year the Society and the U. S. Army Air Corps jointly sent up from the Black Hills in South Dakota the free balloon **Explorer** having a gas capacity of 3,000,000 cubic feet. This balloon, the largest of its type constructed up to that time, reached an altitude of 60,613 feet, a world record. On November 11, 1935, Captain A. W. Stevens (now Lt. Col. ret.), and Captain O. A. Anderson (now

Major Gen.) piloted **Explorer II**, with a gas capacity of 3,700,000 cubic feet, to a new record height of 72,395 feet (13.7 miles).

In 1936 the Society cooperated with National Bureau of Standards and with Georgetown University in observing the total solar eclipse of that year at Ak Bulak and Kustanal, both in the U. S. S. R. The Society and the U. S. Navy the following year sent a joint expedition to Canton Island in the mid-Pacific to study the total solar eclipse best visible at that remote spot. In 1940, again cooperating with the National Bureau of Standards, a Society expedition made solar eclipse observations at Patos, Brazil.

Beginning in 1939 the Society and the Smithsonian Institution have sent a series of archeological expeditions to Mexico to excavate evidences of the Olmec culture in the Isthmus of Tehuantepec region. The first expedition discovered the oldest dated work of man in the New World, a Mayan stone monument bearing a date equivalent to November 4, 291 B. C. (Spinden correlation). Later expeditions unearthed colossal sculptured human heads of stone, some of them weighing 20 tons or more; inscribed monuments and altars; a variety of baked clay images; and caches of hundreds of jade objects.

The headquarters of the National Geographic Society is at 1146 Sixteenth Street, N. W., Washington, D. C. It contains galleries for the exhibition of enlarged photographs taken by the Society's specialists in all parts of the world, an extensive photographic laboratory, and a cartographic department for the production of maps. At the headquarters also is a geographic library, enriched with such collections as the Arctic and Antarctic literature gathered by the late Major General A. W. Greely.

In recognition of attainments in geography and allied fields, the Society has awarded the Hubbard Gold Medal to Peary, Amundsen, Gilbert, Shackleton, Stefansson, Bartlett, Byrd, Lindbergh, Andrews, Anne Morrow Lindbergh, Stevens, Anderson, and Ellsworth. It also awarded special gold medals to Peary, Amundsen, Goethals, Eckoner, Byrd, Amelia Earhart, and Thomas C. Poulter, and a gold medal to Floyd Bennett.

THE AMERICAN HEBREW MEDAL

The American Hebrew Medal is awarded annually by the American Hebrew Magazine to an American citizen voted to have made the best contribution that year to better understanding between Christian and Jew in America. The medal was established at the fiftieth anniversary celebration of the founding of the magazine on Nov. 21, 1929. The medal was first presented in 1930. Recipients have been:

- 1930 Hon. Newton D. Baker, Secretary of War in the Wilson cabinet
- 1931 Archbishop Edward J. Hanna of San Francisco
- 1932 Dr. John H. Finley, associate editor of the New York Times
- 1933 Mrs. Carrie Chapman Catt, feminist leader
- 1934 James C. McDonald, League of Nations High Commissioner for Refugees

- 1935 Roger Williams Strauss, co-chairman of the National Conference of Christians and Jews
- 1936 Hon. Fiorello LaGuardia, mayor of New York City
- 1937 Arturo Toscanini, symphony conductor
- 1938 Franklin Delano Roosevelt, President of the United States
- 1939 Myron C. Taylor, personal envoy of the President to the Vatican
- 1940 George Gordon Battle, American liberal
- 1941 Cordell Hull, United States Secretary of State
- 1942 Wendell L. Willkie
- 1943 Irving Berlin, composer
- 1944 Justice Frank Murphy of the United States Supreme Court.

SCIENCE

THE ATOMIC BOMB

What It Is; How It Works; History of Atomic Research

The atomic bomb, first used in bombing the Japanese cities of Hiroshima and Nagasaki on Aug. 6 and Aug. 9, was developed by American, British, and Canadian scientists who had worked on the project for more than five years.

Two billion dollars appropriated by Congress in 1942 went towards its production. At peak activity, 125,000 men and women worked on it at three major production plants in the United States: two at Oak Ridge, Tenn., and one at Hanford, Wash. Seven thousand of the workers were technicians on the "Manhattan Project," as the secret work was called, at its research center at Los Alamos, outside Santa Fe., N. M.

The two atomic bombs dropped on Hiroshima and Nagasaki caused an estimated 190,000 casualties and left 290,000 homeless, according to Radio Tokyo, Aug. 22. On Sept. 4, an official source said that the Aug. 6 atom bombing of Hiroshima wiped out headquarters of the Japanese 2d army and killed some generals.

The official count of casualties on Aug. 20—two weeks after the bombing—was 33,000 dead, 30,000 missing, 13,950 seriously wounded, and 43,500 other wounded—a total of 120,450. By Sept. 1 the death toll had increased to 53,000.

These figures are a considerable portion of the total Japanese casualties of the war which Domei reported Aug. 24 as follows:

Killed—260,000 of whom 90,000 died from atomic bombs.

Wounded—412,000 including 180,000 atomic victims.

Homeless—9,200,000. Two hundred ninety thousand left homeless from the atom bombs.

Two thirds or 4.1 square miles of Hiroshima's built up area was reported destroyed by the first 400-pound bomb. U. S. Army reconnaissance photographs taken two days after the B-29 "Enola Gay" had dropped it showed a circle of ash stretching from the foothills into the outlying eastern area of the city.

Hiroshima, situated on Honshu island on the Inland sea was Japan's 7th city, with a population of 344,000. During the war the city was a major Japanese port and military center.

The atomic bomb left it with over 60,000 dead and with a rail station, generator station, telephone exchange and many buildings destroyed or damaged. Textile mills and rail centers nearer the circle's edge and relatively distant army bases were destroyed. White smoke rose 20,000 feet.

The bomb dropped on Nagasaki, Kyushu shipbuilding port and industrial center, was an improved type—said army officials. Unlike the Hiroshima bomb it dug a crater destroying a square mile, 30 per cent of the city. The explosion was visible to fliers 200 miles away. More than 10,000 Japanese died.

HOW THE ATOMIC BOMB WORKS

The atomic bomb works on the Einstein theory of physics that all matter is congealed energy. Atoms, the smallest known particles of matter, consist of dense nuclei containing protons and neutrons. They are encircled by electrons. Nuclear fission is a process of splitting the nucleus, knocking away some of the neutrons and releasing energy.

These neutrons may bombard other atom nuclei and split them, so that the process goes on in a chain reaction. If the splitting of many atoms takes place almost instantaneously, an explosion occurs.

As early as 1939 it was known that atoms could be split. Sir Ernest Rutherford, later Lord Rutherford, a British physicist, first used radium to disintegrate other atoms in 1919. In 1932, Sir James Chadwick proved the existence of neutrons, neutral particles embodied in the nucleus of the atom. Two years later, Irene Curie-Joliot and Jean Frédéric Joliot, a French couple, found that certain elements could be made artificially radioactive, that is, that they could give off particles and radiation like natural radium.

In 1934 in Rome Dr. Enrico Fermi at the University of Rome produced the same effect in uranium by bombarding it with neutrons and producing what he thought was a element heavier than uranium. Otto Hahn, a

German chemist, repeated his experiment in 1938 and was puzzled by the appearance of barium, an element which is much lighter than uranium.

In Copenhagen, Dr. Lise Meitner, exiled from Germany because of her Jewish ancestry, worked with Dr. O. R. Frisch and concluded that the bombardment was not producing a new atom but was splitting the uranium nucleus in two, producing barium and other elements.

Dr. Niels Bohr, Danish physicist who was then in the United States, held the theory that the nuclei most easily split were those of the uranium isotope U-235. There are 140 parts of U-238 to one part of U-235 in ordinary uranium, which also contains another isotope, U-234.

Bohr's theory became reality when a group of American scientists, working with Fermi at Columbia University in 1939 isolated U-235 from U-238 by bombarding the latter with neutrons. Using a giant cyclotron—a machine which whirls particles in a magnetic field until they let go—the scientists separated U-235 and in turn bombarded it with neutrons. They found that U-235 atoms split 10,000 times faster than U-238 and that each time an atom was split, the oscilloscope registered at 200,000,000 electron volts.

RESEARCH ON THE ATOMIC BOMB

When war broke out in 1939, America entered the atom research race. President Roosevelt appointed an informal "Advisory Committee on Uranium." In 1941, British physicists came to the United States to work on the project under a cooperative government plan. Scientists started work in 1942 on the U. S. Army's "Manhattan Engineer

District" project. There were two things needed:

1. A substance of such a nature that when its atoms were hit with neutrons, the resulting fission would give off several more neutrons, which would hit and split adjoining atoms, and so on, in chain reaction.
2. A feasible method of containing and

ATOMIC BOMB—Cont.

controlling this explosive chain until the moment when its destructive powers were wanted.

The uranium atom was the most complex and the heaviest of the 92 elements known at the time. Its nucleus was surrounded by 92 electrons. Uranium atoms having 92 protons and 146 neutrons in their nuclei were called U-238 (92 protons plus 146 neutrons equals 238). The uranium atom nuclei having 143 neutrons were called U-235 (92 protons plus 143 neutrons equals 235.) Those having 142 neutrons were called U-234. The three forms of uranium were called isotopes.

U-235 was the only unstable one of the three. Its tremendous potential power had been demonstrated earlier when its atoms had been split in the Columbia University cyclotron.

But the process was unsatisfactory because it was virtually impossible to isolate enough U-235 at one time to get the explosive power needed.

Dr. Arthur H. Compton at the University of Chicago began to investigate the bombardment of U-238 with the neutrons derived from the fission of U-235. He discovered that under certain conditions, the U-238 nucleus would absorb a neutron from U-235 to form a heavier, radioactive isotope called neptunium. This radioactive substance would change to plutonium, Pu 239, an entirely new element.

Plutonium was highly unstable and when touched off by a neutron "bullet" had a similar chain reaction to U-235. It could be produced in quantity.

Production of plutonium began June 17, 1942 at the University of Chicago. Slugs of purified uranium were piled with blocks of graphite and bombarded with neutrons from the fission of U-235. The neutrons from the reaction were bombarded on U-238, changing it to plutonium.

Purpose of the graphite was to act as a moderator. It slowed the reaction. It increased the size of the active material to keep the neutrons from escaping quickly. Many of the neutrons from the U-235 which otherwise would have flashed right off the material and be wasted were absorbed in a slower reaction. Canadian plutonium manufacturers used heavy water, D₂O, as a moderator. Graphite was more easily obtained in the United States.

Following the bombardment of U-238 atoms by neutrons from the nuclear fission of U-235, it was necessary to separate the plutonium. This was done by moving activated slugs from the pile under water to the first of a series of heavy concrete cells where they were dissolved and the plutonium separated through successive chemical operations. The process was governed by remote control and from behind heavy protective shields since the radioactive by-products were dangerous to the human body.

Plutonium production took place at the two plants at Oak Ridge, Tenn., and at Hanford, Wash. The cold water of the Columbia river in Washington was essential to the separation process.

Whether or not plutonium was used exclusively in producing the atom bomb, or in combination with the U-235 was not clear from the War Department report submitted by Dr. H. D. Smyth, head of the Princeton physics department.

Exclusive patents on its method of operation belong to the United States, Canada and Great Britain. Canada, the prime source of uranium, had a major atomic plant at Petawawa, Ont.

It was not stated officially how the bombs were made. The theory was put forth that its operation probably consisted of bringing several pieces of plutonium or uranium isotope together instantaneously by mechanical means. Once enough pieces had been accumulated in a single critical mass, the bomb exploded. No detonator was needed. The atom bomb exploded automatically wherever the atoms were gathered together in large quantities.

The bomb was first tested in the United States on July 16, 1945. It was released from a 100-foot steel tower at Alamogordo air base in the wastelands of New Mexico. The explosion had three phases: first, a light of great brilliance and heat; second, a strong pressure wave; third, a sustained roaring sound. A cloud of smoke soared 100 feet high. The tower was demolished and a crater half a mile wide and a quarter of a mile long left in its place.

Fifteen Nobel prize winners were listed among those who contributed to the final completion of the atomic bomb. Direction of the bomb project in the United States fell chiefly to: Dr. J. Robert Oppenheimer, who headed the project in New Mexico, and Dr. Vannevar Bush, director of the Office of Scientific Research, who secured the funds.

President Truman in a White house statement Aug. 6 declared that the bomb dropped on Hiroshima had more power than 20,000 tons of TNT and produced a blast 2,000 times greater than the most powerful bomb ever dropped.

Time magazine estimated that "123 planes, each bearing a single atomic bomb, would carry as much as all the bombs (2,453,595 tons) dropped by the Allies on Europe during the war."

Indicative of the public reaction to the bomb was the following statement by the Danish scientist, Dr. Niels Bohr, who worked on it in the United States:

"Against the new destructive powers no defense is possible, and the issues center on worldwide cooperation to prevent any use of the new source of energy which does not serve mankind as a whole."

President Truman made this statement:

"The atomic bomb is too dangerous to be loose in a lawless world. That is why Great Britain, Canada and the United States, who have the secret of its production, do not intend to reveal that secret until the means have been found to control the bomb so as to protect ourselves and the rest of the world from the danger of total destruction."

SPEED OF LIGHTENING

Lightening travels at speeds from 14,900 to 68,400 miles a second, the average speed being 28,500 miles a second, or 15 per cent of the speed of light. These measurements were obtained in experiments conducted for

the South African Institute of Electrical Engineers, by Dr. B. F. J. Shonland of Cape Town university and H. Collens of the Victoria Falls and Transvaal Power company.

RADAR—WONDER OF WORLD WAR II

Radar, or radiolocation, used extensively by the Allies in the European and Pacific theaters of World War II, is the technique of detecting and locating objects, such as airplanes or ships, by means of radio waves echoed or reflected back from them.

The term "radar" was coined in the United States from a navy code word meaning "radio direction finding and ranging." It was adopted January, 1941, both in Britain and the United States for service purposes. The same science had been known for more than a decade by the British services as "radiolocation" or R. F. D. (Reflection Direction Finding).

Developed independently in Great Britain and the United States in the 20s' the science of radar was put into operational use in Britain earlier than any country in the world. In August, 1940, British and American scientists pooled their information.

Active work on military radar was undertaken in France and Germany in 1935, but British and Americans outdistanced these countries in perfecting it.

Radar was credited with winning the Battle of Britain, the U-Boat campaign and with the devastation of Germany and many Japanese ports by bombers.

Early Development

Sir Robert A. Watson-Watt, D. B., F. R. C., a British scientist, first took radar out of the laboratory and put it to practical use in Britain. His early experiments followed up the preliminary work done between 1922 and 1930 by Dr. Albert Hoyt

Taylor and Leo C. Young of the U. S. Naval Research laboratory and Dr. Gregory Breit and Dr. Merle A. Tuve of the Carnegie Institute on the height of the Kennelly Heaviside layer.

This layer is the world's electric roof, 150 miles up, which behaves like a mirror and reflects radio waves back to the earth.

By 1931 the British Post office had demonstrated use of short wave energy to detect ships and airplanes. In 1934 the radio department of the British National Physical laboratory was working on a device to detect and locate airplanes. The apparatus was similar to the kind built to receive echoes from the ionosphere or Heaviside layer. In its first experiment, the instrument proved successful.

In December, 1935, the Air Ministry established five radiolocation stations on England's east coast. This was the first operational radar system in the world.

In August, 1937, 15 more stations were added to the chain, giving complete coverage of the east and south east coasts of Great Britain. By March, 1939, the Air Ministry had established a continuous chain of stations, from Scotland to the Isle of Wight. From Easter, 1938, on through the war a continuous 24-hour radar watch was kept on sea approaches to Britain.

By September 1938, \$8,000,000 had been spent on the work by the British government; by March, 1940, the total sum expended was \$36,000,000. By the end of the war the radar industry operated on a \$480,000,000 per annum basis.

RADAR IN THE UNITED STATES

As the British advanced in the development of radiolocation, similar activity was being carried on secretly in the United States. The U. S. Navy pioneered in the field. Dr. Albert Hoyt Taylor, chief navy physicist and superintendent of the radio division, Naval Research laboratory, made fundamental discoveries on the nature of radio waves and built some of the first radar instruments. Robert M. Page, a laboratory technician, made major contributions to radar's technical progress.

In 1922, Taylor and an associate, Leo C. Young, discovered that passing ships obscured the short wave signals they were sending to each other across the Potomac river. They suggested in a Navy Department memorandum that radiodetection equipment could help destroyers operating on parallel lines several miles apart to discover an alien vessel between them in any weather.

Three years later, Louis A. Gebhard, under Taylor's command, completed the first transmitting equipment embodying the electronic high frequency "pulse" principle now used in radar equipment.

It became possible to throw a series of radio pulses against the ionosphere. A receiver would pick up the pulse echoes reflected from the ionosphere.

On June 24, 1930, Taylor, Young and L. A. Hyland found that a passing plane interfered with the radio activity created in these ionosphere experiments. This was duly reported to the Navy's Bureau of Engineering. The Bureau ordered Taylor to "investigate the use of radio to detect the presence of enemy vessels and aircraft."

Taylor assigned Robert M. Page to the

work. He soon had a radar set "giving satisfactory results at long range".

In 1935, members of the House Naval Appropriations subcommittee witnessed radar experiments at the invitation of Rear Admiral Harold G. Bowen, Chief of the Bureau of Engineering. They set aside \$100,000 for the work.

The first radar tryout at sea took place on the destroyer "Leary" in April, 1937, under Page and a crew of Naval Research laboratory men. Its success aided the development by February, 1938, of high powered pulse radar which could detect planes at a range of 50 miles.

In the same year miniature radar for airplanes was developed which could receive echoes from the earth's surface and thereby give the pilot constant altitude information. Dr. Claude Cleeton, University of Michigan, L. R. Philpott, University of Idaho, and John P. Hagen from Connecticut Wesleyan were chiefly responsible for this apparatus.

By December, 1938, Page, Robert C. Guthrie, H. E. Reppert, A. A. Varela, I. H. Page and Lieut. E. L. Luke had built radar model XAF. It was installed in the battleship "New York" and for three months underwent extensive tests during battle maneuvers.

Guthrie had installed 20 models of XAF by 1939 in battleships, aircraft carriers and cruisers. Mass production of radar started in August, 1940.

After British radar had proved itself in the Battle of Britain, Sir Robert Watson-Watt and a British mission brought their findings to the United States in 1940. Their information was given to army and navy scientists, and the Massachusetts Institute of Technology Radiation laboratory.

HOW RADAR WORKS

Radar works on two basic principles: first, that radio waves bounce back from objects, and second, that very short radio waves can be focused in a beam much like a searchlight.

A simple radar set sends out powerful pulses of high frequency (short) waves, and receives and times the wave echoes from an object in their path. This out-and-back cycle is repeated from 60 to 2,000 times per second, depending upon the design of the set.

The information is translated on the oscilloscope ("scope") or face of a cathode ray tube. There are three main types of scopes. An "A" scope indicates the range of the target as the distance along a horizontal electron line to the target from the transmitter. A "B" scope shows the range vertically and the relative bearing horizontally. A PPI (Plan Position Indicator) scope shows a circular map-type image of the observed area.

Radio waves travel at the same constant speed as light—186,000 miles per second—and behave very much like sound waves in the way they echo from an object back to the transmitter. On the "A" scope, the distance of the object away is determined by dividing 186,000 by the number of seconds it takes for the echo to return and then by dividing the product by two.

For instance, if a radio wave goes out from a radar station and comes back in 1/500th of a second, the distance out and back from the transmitter would be 186,000 divided by 500 or 372. Divided by two, the product shows the object would be 186 miles from the station.

The cathode ray tube with an "A" type of scope measures such short intervals of time automatically. A beam of electrons is made to travel across the scope horizontally, in any predetermined interval of time.

For example, if the beam travels across the "A" scope in 1/500th of a second, this line represents the time taken for a radio wave to travel 186 miles out and back. One end of the line is therefore marked at 186 and the other at 0. As the object approaches a V-shaped depression or "blip" (or "pip") is registered in the line representing its distance away.

The process is continuous. Many pulses are transmitted every second. A sufficient time interval is allowed so that each echo can return from the greatest distance the instrument can measure. In combat, the "A" scope thus indicates the range of the target.

In addition to knowing the range, it was necessary during the Battle of Britain to find the height, direction and strength of enemy formations. It was known that low flying craft, a few hundred feet above the ground, would not register immediately on the "A" scope electron line.

A series of 200 m/c "microwave" tubes, capable of generating many kilowatts of high frequency energy, was developed in Britain to register low flying craft. These tubes made it practicable to mount the entire radar aerial system on a turntable and to concentrate the energy into a beam like a searchlight, which could sweep the horizon. The cathode ray tube rotated in synchronism.

With this searchlight type of radar, the direction of the target could be ascertained. If the signal returned from an aircraft

brightened the line instead of deflecting it, its position could be shown by a bright spot on the circular face of the tube. The tube could then have a map of the surrounding terrain superimposed on it.

The height of the distant craft could be measured by comparing the strength of the echo received by aerials at different heights. Such location was usually correct to within 500 feet.

One of the major problems at first was to identify the craft. IFF (Identification, Friend or Foe) radar was developed to do this. It consisted of a transmitter and receiver. The transmitter, or Interrogator, could send out a high-frequency beat which, when it reached the challenged plane could identify it as friend or foe. If the plane was a friendly one, its transmitter, or Transponder, automatically triggered the correct answering beat which would be received by the challenger on a Responder. The actual process of IFF was kept secret.

The development of various types of radar, for defense and then for offense, parallels the history of the Battle of Britain. The "A" scope radar was used to spot approaching aircraft at ground stations and was called AW (Aircraft Warning) radar.

As night fighters took to the air to battle Luftwaffe in 1941, Air Interception (AI) radar was developed for planes which enabled pilots to "see" their targets ahead of them. Using a "B" scope—which indicated the target's range vertically and relative bearing horizontally—the pilot could watch a green glow representing the radio echo from the enemy imposed on the face of the tube. This image was reflected on his windshield in such a way that the target seemed superimposed on the night sky ahead of him.

As this green spot drew closer, it grew "wings". And when close enough, the fighter could intercept the enemy plane.

Air interception radar, used in combination with GCI (Ground Control of Interception) was largely responsible for the end of the blitz by 1941. The latter device consisted of ground radar stations which directed (or "vectored") friendly planes to within radar or visual range of the enemy fighters shown in the radar scope.

The development of microwave radar had proved itself in naval navigation for submarine detection in the U-boat campaign of 1942 before it was used by RAF bombers. Against submarines it was known as ASV (Anti-Submarine Vision) radar.

Various types of microwave airplane devices were developed. One device indicated the precise altitude of an aircraft above the surface of the ground and gave warning of adjacent mountains.

PPI (Plan and Position Indicator) the third type of scope developed, found towns for bombers by displaying a moving map of the terrain below. It "painted" a fluorescent screen scope with a dim picture of the ground below. A bright line on the screen, called a rotating scanner beam, was synchronized with a rotating antenna which bounced centimeter waves from the land underneath. As the beam and antenna rotated, a clear picture was etched on the scope.

The scope itself was marked with bright rings, indicating 5-mile intervals. The scale of these rings could be enlarged to 10-mile intervals. A bombing circle in the center of these rings also indicated altitude.

Use of microwave radar was withheld

HOW RADAR WORKS (Continued)

until enough of it had been produced for mass raids on Germany. Statistical analyses showed that it made bombers 500 per cent more effective.

One of the most useful types of radar for air navigation, the "Gee" device, enabled a bomber to ascertain its position at all times.

Allied bombers could take off, navigate and return from mass raids with minute accuracy, fixing their positions on special gridded maps by the aid of "Gee" signals from ground stations. Within two months,

"Gee" changed the number of bombers the Allies could put over a target in an hour from 100 to 1,000.

D-day operations were facilitated by "Rebecca Eureka" radar which guided hundreds of parachutists and glider troops to their objectives. It consisted of automatic radar sets, dropped with the first wave of paratroopers, who set them up on the ground. Gliders following were able to pick up signals from these "Eureka" sets with their own radar devices, nicknamed "Rebecca".

OTHER KINDS OF RADAR

There are necessarily many types of radar—some perfected in the Pacific theater warfare—which have been omitted in this account.

There is the "Mickey" for instance. This is a type of radar with a PPI scope which was used extensively by Pathfinders in BTO (Bombing through the Overcast). The AAF first used BTO in a highly successful raid against Wilhelmshaven on Nov. 3, 1943. Improved and modified, it was soon put to work against Japan, both for bombing and navigation.

Low Altitude Bombing (LAB) was a microwave Anti-Submarine Vision setup which combined basic radar, a special attachment and a Norden bombsight. With LAB a bombardier could handle his run-in from several miles out and make his bomb release with radar.

It was estimated that in a span of 18 months a handful of LAB Liberators of the U. S. 5th, 13th and 14th air forces destroyed more than 500,000 tons of enemy shipping and war ships. Twenty LAB planes of the 14th air force sank 250,000 tons of shipping and more than 10 warships in the China seas.

Loran, or Long Range Navigation, developed by M.I.T. Radiation Laboratory, gives precise position fixes by means of electronic lines to navigators as far as 1,500 miles from stations. The British version of this navigational aid was "Gee."

GCA means Ground Controlled Approach and describes the technique and apparatus for "talking down" an airplane in poor visibility by means of two-way radio for a radar station.

Antiaircraft defenses and searchlights in Britain were aided by AGL, Automatic Gun Laying radar, which directed the guns and controlled their fire, and SLC, Searchlight Control radar, known as "Elsie."

A unique radar device, TW (Tail Warning) radar, served to warn fighters and bombers of the approach of enemy planes in the rear. When a plane came within 800 yards of a TW-equipped plane, a light would flash on the instrument panel and a horn would blow to warn the pilot.

AMERICAN SOCIETY OF MECHANICAL ENGINEERS MEDAL

Recipients of the medal have been:

- 1921—Hjalmar Gotfried Carlson
- 1922—Frederick Arthur Halsey
- 1923—John Ripley Freeman
- 1926—Robert A. Millikan
- 1927—Wilfred Lewis
- 1928—Julian Kennedy

- 1929—William LeRoy Emmet
- 1931—Albert Kingsbury
- 1933—Ambrose Swasey
- 1934—Willis H. Carrier
- 1935—Charles T. Main
- 1936—Edward Bausch
- 1937—Edward P. Bullard

- 1938—Stephen J. Pigott
- 1939—James E. Gleason
- 1940—Charles F. Kettering
- 1941—Theodor von Karman
- 1942—E. G. Bailey
- 1943—Lewis K. Silcox
- 1944—Edward G. Budd

NUMBER OF STARS

According to the best astronomers the number of stars that can be seen by a person of average eyesight is only about 7,000. The number visible through the telescope has

been estimated by J. E. Gore at 70,000,000 and by Profs. Newcomb and Young at 100,000,000. Recent estimates of the number of stars run as high as 1,800,000,000.

GLACIAL STAGES, CULTURAL STAGES, AND HUMAN REMAINS OF THE AGE OF MAN

(Prepared by the American Museum of Natural History)

PLEISTOCENE PERIOD	Glacial and Interglacial Stages	Stone Culture Stages	Man
	Recent Period	Neolithic (New Stone) Mesolithic (Mid-Stone) Magdalenian Solutrean Aurignacian	Modern Man, <i>Homo sapiens</i> , Whole world. Cro-Magnon Group, <i>Homo sapiens</i> , Europe. Mount Carmel Man, Palestine.
	IV Glacial Stage Würm		
	3 Interglacial Stage	Mousterian	Neanderthal Group, <i>Homo neanderthalensis</i> , Europe. Solo Man, <i>Homo soloensis</i> , Java.

ELECTRICAL UNITS DEFINED

(Source: Roget's Dictionary of Electrical Terms)

Ohm—The practical unit of resistance. Named for the German physicist, G. S. Ohm (1787-1854). A true Ohm is 10^9 C.G.S. absolute electromagnetic units of resistance.

International Ohm—The resistance offered to an unvarying current by a column of mercury at the temperature of melting ice, 14.4521 grammes in mass of constant cross section and of length of 106.300 centimetres. Equal to 1.00052 true Ohm.

Ampere (A.)—The practical unit of current (named for the French physicist Andre Marie Ampere (1775-1836)). The true ampere is one-tenth of the C.G.S. electromagnetic unit of current. The ampere can also be defined as the current produced by one volt applied to a conductor the resistance of which is one Ohm.

International Ampere—The value of an unvarying current which, when passed through a silver voltameter of specified form, deposits 0.00111800 grammes of silver per second. Equal to 0.99991 true ampere.

International Units—The system of units of electrical measurement recognized by law in most countries, based upon the values of the standards representing the International Ampere and International Ohm agreed upon at the International Conference in London in 1908.

Volt—The practical unit of electromotive force, potential difference, etc., being 10^8 C.G.S. units and that E.M.F. which produces a current of one ampere through a resistance of one ohm.

International Volt—The E.M.F. or electrical pressure which when applied to a conductor, the resistance of which is one International Ohm, will produce a current of one International Ampere. Equal to 1.00043 true Volt.

Coulomb (C.)—A "practical" unit of quantity of electricity (named for C. A. de Coulomb, 1736-1806), being the quantity

which has passed when one ampere has flowed for one second, i.e. 10^{-1} absolute C.G.S. electromagnetic units. For engineering purposes the ampere-hour is more commonly used. (One Ampere Hour = 3,600 coulombs.)

Faraday—A unit of quantity of electricity sometimes used in electro-chemistry, being the quantity required to a "gramme equivalent" of the substance, and equal to 96,500 coulombs.

Farad (F.)—The unit of capacity corresponding to the practical electrical units; i.e. that capacity which is charged to a pressure of one volt by one coulomb, equal to 10^{-9} absolute C.G.S. electromagnetic units. As this is inconveniently large for ordinary purposes, the Microfarad, one millionth of a farad, is commonly used, although in many formulae capacities are expressed in farads for making calculations. (Named for Michael Faraday, 1791-1867).

Joule (J.)—A "practical" unit of energy usually applied to the measurement of heat developed by a current; being the quantity of energy developed from the expenditure of one watt for one second, i.e. 10^7 C.G.S. electromagnetic units. Equivalent to 10^7 ergs, 0.239 calories, 0.00094 B. Th. U., 0.73756 ft.-lbs., or 0.277778 kw.-hr. (Named for J. P. Joule, 1818-1889).

Watt (W.)—The practical unit of electric power (equal to 10^7 ergs per second, one joule per second or $1/746$ h.p.) The power in a circuit in watts is equal to the number of volts multiplied by the number of amperes and, in the case of alternating current, by the power factor.

International Watt—The energy expended in one second by an unvarying current of one International Ampere under an electrical pressure of one International Volt. Equal to 1.00043 true Watt.

THERMOMETER

The Fahrenheit thermometer generally is used in English-speaking countries and the Centigrade, or Celsius, thermometer in countries that use the metric system. A Réaumur thermometer is slightly used in Continental Europe.

In the Fahrenheit thermometer the freezing-point of water is 32° , and the boiling point of water at mean atmospheric pressure at the sea-level, 14.7 lb. per sq. in., is 212° , the distance between these two points being 180° . In the Centigrade and Réaumur thermometers the freezing-point is 0° . Boiling-point is 100° in the Centigrade scale, and 80°

in the Réaumur.

1 Fahrenheit degree = $5/9$ deg. Centigrade = $4/9$ degree Réaumur.

1 Centigrade degree = $9/5$ deg. Fahrenheit = $4/5$ deg. Réaumur.

1 Réaumur degree = $9/4$ deg. Fahrenheit = $5/4$ deg. Centigrade.

Temperature Fahrenheit = $9/5 \times \text{temp. C} + 32^\circ = 9/4 \text{ temp. R.} + 32^\circ$.

Temperature Centigrade = $5/9 (\text{temp. F.} - 32^\circ) = 5/4 \text{ temp. R.}$

Temperature Réaumur = $4/5 \text{ temp. C.} = 4/9 (\text{temp. F.} - 32^\circ)$.

THE CHEMICAL ELEMENTS (Continued)

Element	Sym- bol	Atom- ic Number	Atomic weight	Melting point Degree C.	Boiling point Degree C.	Year Dis- covered	Discoverer*
Selenium.....	Se	34	78.96	220	688	1818	Berzelius
Silicon.....	Si	14	28.06	1420	2600	1823	Berzelius
Silver.....	Ag	47	107.880	960.5	1950	B.C.	
Sodium.....	Na	11	22.997	97.5	880	1807	Davy
Strontium.....	Sr	38	87.63	800	1150	1808	Davy
Sulfur.....	S	16	32.06	112.8	444.6	B.C.	
Tantalum.....	Ta	73	180.88	2850	>4100	1802	Ekeberg
Tellurium.....	Te	52	127.61	452	1390	1782	Von Reichenstein
Terbium.....	Tb	65	159.2			1843	Mosander
Thallium.....	Tl	81	204.39	303.5	1650	1861	Crookes
Thorium.....	Th	90	232.12	1845	>3000	1828	Berzelius
Thulium.....	Tm	69	169.4			1878	Cleve, Sorett
Tin.....	Sn	50	118.70	231.85	2260	B.C.	
Titanium.....	Ti	22	47.90	1800	>3000	1795	Klaproth
Tungsten.....	W	74	183.92	3370	590	1783	d'Elhuyar
Uranium.....	U	92	238.07	<1850		1841	Peligo
Vanadium.....	V	23	50.95	1710	3000	1830	Sefstrom
Xenon.....	Xe	54	131.3	-140	-109.1	1898	Ramsay, Travers
Ytterbium.....	Yb	70	173.04			1878	Marignac
Yttrium.....	Y	39	88.92	1490	2500	1843	Mosander
Zinc.....	Zn	30	65.38	419.47	907	B.C.	
Zirconium.....	Zr	40	91.22	1900	>2900	1824	Berzelius
		95				1945	Seaborg
		96				1945	Seaborg

COMMON NAMES OF CHEMICAL SUBSTANCES

Common name	Chemical name	Common name	Chemical name
Alcohol, grain.....	Ethyl alcohol	Mercurochrome.....	Mercury with bromine
Alcohol, wood.....	Methyl alcohol	Plaster of Paris.....	Gypsum
Alum, common.....	Potassium-aluminum sulfate	Prussic acid.....	Hydrocyanic acid
Aqua fortis.....	Nitric acid	Quicksilver.....	Mercury
Aspirin.....	Acetyl salicylic acid	Rochelle salts.....	Potassium sodium tartrate
Bleaching powder.....	Calcium hypochlorite	Sal ammoniac.....	Ammonium chloride
Borax.....	Sodium tetraborate	Salt, common.....	Sodium chloride
Calomel.....	Mercurous chloride	Saltpeter.....	Potassium nitrate
Carbolic acid.....	Phenol	Saltpeter, Chile.....	Sodium nitrate
Cream of tartar.....	Potassium bitartrate	Soda, baking.....	Sodium bicarbonate
Epsom salts.....	Magnesium sulfate	Soda, washing.....	Sodium carbonate
Ether.....	Diethyl ether	Spirits of hartshorn.....	Ammonia solution
Formalin.....	Formaldehyde	Sugar (cane or beet).....	Sucrose
Fruit sugar.....	Fructose	TNT.....	Trinitrotoluene
Laughing gas.....	Nitrous oxide	Vitriol, oil of.....	Sulphuric acid
Lime, quick.....	Calcium oxide	Water glass.....	Sodium silicate
Lime, slacked.....	Calcium hydroxide	White lead.....	Basic lead carbonate
Lunar caustic.....	Silver nitrate	Wormwood.....	Absinthium

MOH'S SCALE OF HARDNESS

Scale of Hardness	Working Scale of Hardness
1. Talc.....	1. Very easily scratched by finger nail and has greasy feel to the hand
2. Gypsum.....	2. Easily scratched by finger nail
3. Calcite.....	3. Scratched by brass pin or copper coin
4. Fluorite.....	4. Easily scratched by knife
5. Apatite.....	5. Scratched with difficulty with knife
6. Orthoclase.....	6. Easily scratched by file
7. Quartz.....	7. Is but little touched by file, but will scratch window glass
8. Topaz.....	8. All harder than 7 will scratch window glass
9. Corundum.....	
10. Diamond.....

Scientific Awards

MEDALISTS OF ENGINEERING SOCIETIES

Sponsored by the American Society of Civil Engineers, American Institute of Mining and Metallurgical Engineers, American Society of Mechanical Engineers and American Institute of Electrical Engineers.

WASHINGTON MEDAL AWARDS

The Washington award is sponsored by the American Society of Civil Engineers, American Institute of Mining and Metallurgical Engineers, the American Society of Mechanical Engineers, the American Institute of Electrical Engineers and the Western Society of Engineering.

Recipients of the medal have been:

1919—Herbert C. Hoover	1929—Bion Joseph Arnold	1939—Daniel W. Mead
1922—Robert W. Hunt	1930—Mortimer Elwyn Cooley	1940—Daniel Cowan Jackling
1923—Arthur N. Talbot	1931—Ralph Modjeski	1941—Ralph Budd
1925—J. Waldo Smith	1932—William David Coolidge	1942—William Lamont Abbott
1926—John Watson Alvord	1935—Ambrose Swasey	1943—Audrey Abraham Potter
1927—Orville Wright	1936—Charles Franklin Kettering	1944—Henry Ford
1928—Michael Idvorsky Pupin	1937—Frederick Gardner Cottrell	1945—Arthur Holly Compton
	1938—Frank Baldwin Jewett	

HOOVER MEDAL

Awarded jointly by the American Society of Civil Engineers, American Institute of Mining and Metallurgical Engineers, the American Society of Mechanical Engineers, the American Institute of Electrical Engineers.

Recipients of the medal have been:

1930—Herbert C. Hoover	1938—John Frank Stevens	1942—Gerard Swope
1936—Ambrose Swasey	1939—Gano Dunn	1943—No award
1937—No award	1940—No award	1944—Ralph Edward Flanders
	1941—D. Robert Yarnall	

SPIRIT OF ST. LOUIS MEDAL

St. Louis citizens and members of the American Society of Mechanical Engineers sponsor this award.

Recipients have been:

1929—Daniel Guggenheim	1935—Will Rogers (posthumously)	1941—John E. Younger
1932—Paul Litchfield	1938—James H. Doolittle	1944—George W. Lewis

WORCESTER REED WARNER MEDAL

Awarded by the American Society of Mechanical Engineers and founded by Mr. Warner.

Recipients of the medal have been:

1933—Dexter S. Kimball	1937—Clarence F. Hirschfeld	1941—Richard V. Southwell
1934—Ralph E. Flanders	1938—Lawford H. Fry	1942—Fred H. Colvin
1935—Stephen Timoshenko	1939—Rupen Eksegian	1943—Igor I. Sikorsky
1936—Charles M. Allen	1940—William B. Gregory	1944—Earle Buckingham

HOLLEY MEDAL

Recipients of the Holley medal founded by American Society of Mechanical Engineers George I. Rockwood and awarded by the have been:

1924—Hjalmar Gottfried Carlson
1928—Elmer Ambrose Sperry
1929—Baron Chuzaburo Shiba
1934—Irving Langmuir

1936—Henry Ford
1937—Frederick G. Cottrell
1938—Francis Hodgkinson
1939—Carl E. Johansson
1940—Edwin Howard Armstrong

1941—John C. Garand
1942—Ernest O. Lawrence
1943—Vannevar Bush
1944—Carl L. Norden

JAMES DOUGLAS MEDAL

Recipients of the James Douglas medal sponsored by the American Institute of Mining and Metallurgical Engineers have been:

1923—Frederick Laist
1924—Charles Washington Merrill
1925—William Hastings Bassett
1926—John Michael Callow
1927—Zay Jeffries
1928—Selwyn G. Blaylock
1929—Paul Dyer Merica

1930—John Van Nostrand Dorr
1931—William H. Pierce
1932—Champion Herbert Mathewson
1933—James O. Elton
1935—George Cameron Stone
1938—Hal Williams Hardinge

1940—Louis D. Ricketts
1941—No award
1942—Arthur Smith Dwight
1943—No award
1944—No award
1945—Robert Franklin Mehl

NATIONAL INSTITUTE OF SOCIAL SCIENCES AWARDS

Composed of men and women who have achieved success in some field of scientific endeavor, the National Institute of Social Sciences, awards annually medals in recognition of the humanitarian and patriotic services of men and women. William Edwin Hall is president of the institute which has offices at 271 Madison avenue, New York City.

Gold medals awarded by the institute have been:

1913, Archer M. Huntington; Samuel L. Parrish, William H. Taft.

1914, Charles W. Eliot, Maj.-Gen. George W. Goethels, Abraham Jacobi, Henry Fairfield Osborn.

1915, Luther Burbank, Andrew Carnegie.
1916, Robert Bacon, Mrs. H. Hartley Jenkins, Adolph Lewisohn.

1917, George W. Crile, Surgeon-Gen. William C. Gorgas, John Purroy Mitchell, Michael Idvorsky Pupin.

1918, Henry P. Davison, Herbert C. Hoover, William J. Mayo.

1919, Samuel Gompers, William Henry Welch.

1920, Alexis Carrel, H. Holbrook Curtis, Sir Wilfred T. Grenfell, Harry Pratt Judson.

1921, Charles Frederick Chandler, Calvin Coolidge, Madame Marie Curie, Cleveland H. Dodge.

1923, Charles B. Davenport, Sir Auckland Geddes, Emory R. Johnson, M. Jules J. Jusserand, John D. Rockefeller, Sr.

1924, Walter Hampden, Charles E. Hughes, Mrs. C. Lorillard Spencer.

1925, Mrs. E. H. Harriman, William H. Park, Elihu Root, Owen D. Young.

1926, Rev. S. Parkes Cadman, Clarence Hungerford MacKay, Stephen Tyng Mather, Mary Schenck Woolman.

1927, George Pierce Baker, Walter Darrsch, Rev. Harry Emerson Fosdick, Adolph S. Ochs.

1928, Liberty Hyde Bailey, Robert W. deForest, Willis R. Whitney.

1929, Mrs. Valeria Langeloth, Rose Livingston, John D. Rockefeller, Jr., James T. Shotwell, Daniel Willard.

1930, Anna Billings Gallup, George R. Minot, William Lyon Phelps, Nathan Straus.

1931, Grace Abbott, Richard Clarke Cabot, Mrs. Grace Goodhue Coolidge, Frank B. Kellogg.

1932, Edward E. Allen, James Howell Post, William C. Redfield, Gerard Swope.

1933, Newton D. Baker, Clifford W. Beers, Commander Evangeline Booth.

1934, Mrs. Eleanor Robson Belmont, Walter B. Cannon, Samuel Seabury.

1935, C. N. Bliss, Harvey Cushing, Carter Glass, George E. Vincent.

1936, Nicholas Murray Butler, William Edwin Hall, Mrs. Harrison Eustis, J. P. Morgan.

1937, James Rowland Angell, J. Edgar Hoover, Mrs. Mary Louise Curtis Bok, Wesley Clair Mitchell.

1938, John W. Davis, Walter S. Gifford, Dorothy Thompson.

1939, Martha Berry, William Church Osborn, George Wharton Pepper.

1940, Mrs. Carrie Chapman Catt, James E. West, Wendell L. Willkie.

1941, Norman H. Davis, Mrs. J. Borden Harriman, Alfred E. Smith.

1942, Rufus B. von KleinSmid, Mrs. Anne O'Hare McCormick, Donald M. Nelson.

1943, Madame Chiang Kai-shek, Edwin Grant Conklin, Mildred H. McAfee, Lieut. Commander, USNR, Juan Terry Trippe.

1944, Bernard M. Baruch, Mrs. Henry Pomeroy Davison, James G. K. McClure.

1945, Dr. Vannevar Bush, Mrs. John Henry Hammond, Dr. William Mather Lewis.

J. J. R. CROES MEDAL

Sponsored by the American Society of Civil Engineers. Recipients of the award have been:

1920—B. A. Smith
1921—Fred A. Noetzi
1922—William Cain
1923—James F. Sanborn
1924—Joel D. Justin
1925—Charles S. Whitney
1926—Clarence S. Jarvis
1927—Henry Clay Ripley
1930—H. deB. Parsons
1931—John R. Freeman

1932—David L. Yarnell and Floyd A. Nagler
1933—Earl I. Brown
1934—H. M. Westergaard
1935—A. T. Larned and W. S. Merrill
1936—Wilbur M. Wilson
1937—Inge Lyse & Bruce G. Johnston
1938—E. C. Hartmann

1939—B. A. Mockmore
1940—Edward J. Rutter, Quintin B. Graves and Franklin F. Snyder
1941—Earl I. Brown
1942—Charles F. Ruff
1943—C. H. Gronquist
1944—N. M. Newmark

NORMAN MEDAL

The Norman medal was endowed by the late George H. Norman in 1872 and is sponsored by the American Society of Civil Engineers.

Recipients since 1919 have been:	1928—Charles E. Sudler	1937—J. C. Stevens
1919—William Barclay Parsons	1929—G. T. Rude	1938—Hunter Rouse
1920—J. A. L. Waddell	1930—Charles Terzaghi	1939—Charles H. Lee
1922—Charles H. Paul	1931—Floyd A. Nagler and Albion Davis	1940—Shorridge Hardesty and Harold E. Wessman
1923—D. B. Steinman	1933—Hardy Cross	1941—J. A. Van den Brook
1924—B. F. Jakobsen	1934—Leon S. Moisseiff	1942—Karl Terzaghi
1925—Harrison P. Eddy	1935—D. C. Henry	1943—Thomas E. Stanton
1926—Julian Hinds	1936—Daniel W. Mead	1944—Ralph B. Peck
1927—B. F. Jakobsen		

JOHN FRITZ MEDAL

The John Fritz medal is awarded by the American Society of Civil Engineers, the American Institute of Mining and Metallurgical Engineers, the American Society of Chemical Engineers and the American Institute of Electrical Engineers.

Recipients of the award have been:	1917—Henry Marion Howe	1929—Herbert Clark Hoover
1902—John Fritz	1918—J. Waldo Smith	1930—Ralph Modjeski
1905—Lord Kelvin	1919—Gen. George W. Goethals	1931—David Watson Taylor
1906—George Westinghouse	1920—Orville Wright	1932—Michael Idvorsky Pupin
1907—Alexander Graham Bell	1921—Sir Robert A. Hadfield	1933—Daniel Cowan Jackling
1908—Thomas Alva Edison	1922—Charles Prosper Eugene Schneider	1934—John Ripley Freeman

CHANDLER AWARDS

Source: Charles Frederick Chandler Foundation, Columbia University

Friends and former students of Prof. Charles Frederick Chandler, American chemist, April 1, 1910, donated a sum of money and presented to Dr. Chandler a die of a gold medal which has been made the basis of the Charles Frederick Chandler medals presented to outstanding chemists since 1913. The income of the original fund is used in defraying the expense of delivery and publication of at least one public lecture each year on some phase of the science of chemistry and its practical applications. A replica of the medal is given the lecturer.

Awards have been:	1935—Jacob G. Lipman
1914—Leo Hendrik Baekeland	1936—William Francis Giauque
1917—W. F. Hillebrand	1937—John Howard Northrup
1920—Willis R. Whitney	1937-1939—No award
1921—F. Gowland Hopkins	1939-1940—Thomas Hamilton Chilton
1922—Edgar Fahs Smith	1940-1941—No award
1923—Robert E. Swain	1941-1942—Robert R. Williams and Roger John Williams
1925—Edward C. Kendall	1942-1943—Willard Henry Dow
1926—Samuel W. Parr	
1928—Moses Gomberg	
1929—John Arthur Wilson	
1930—Irving Langmuir	
1932—James B. Conant	
1933—George O. Curme, Jr.	

PENROSE MEDAL

The Penrose medal is awarded by the Geological Society of America in recognition of eminent research in pure geology and contributions to the science of geology. Prof. George D. Louderback, chairman of the department of geological sciences at the University of California, as chairman of the society's committee awards, presented this year's medal.

All the recipients were of the United States except Sederholm of Finland; Lacriox, France, and Coleman, Canada.

Recipients have been:	1935—Reginald Aldworth Daly
1927—Thomas Crowder Chamberlin	1936—Arthur Philemon Coleman
1928—Jacob Johannes Sederholm	1937—No award
1930—Francois Alfred Antoine Lacriox	1938—Andrew C. Lawson
1931—William Morris Davis	1939—William B. Scott
1932—Edward Oscar Ulrich	1940—Nelson H. Darton
1933—Waldemar Lindgren	1941—Norman L. Bowen
1934—Charles Schuchert	1942—Charles K. Leith
	1943—No award
	1944—Bailey Willis

ANOTHER PENROSE MEDAL

The Society of Economic Geologists of which Prof. D. H. McLaughlin, of Harvard university, is secretary, also awards a Penrose medal. Awards of the society have been:

1924—Thomas B. Chamberlin	1931—David White	1939—Reno Harper Sales
1927—Waldemar Lindgren	1933—Louis De Launay	1942—William H. Emmons
1929—Johan H. L. Vogt	1935—Charles Kenneth Leith	1944—Walter C. Mendenhall

All the recipients were of the United States except Vogt of Norway and Launay of France.

AMERICAN INSTITUTE OF ELECTRICAL ENGINEERS AWARDS

Edison Medal. The medal was established Feb. 11, 1904, and is awarded once each year by the Edison Medal committee to some resident in the United States of America and its dependencies, or of the

Dominion of Canada, for "meritorious achievement" in electrical science or electrical engineering or the electrical arts. Awards of the medal have been as follows:

1909—Elihu Thomson
1910—Frank J. Sprague
1911—George Westinghouse
1912—William Stanley
1913—Charles F. Brush
1914—Alexander Graham Bell
1916—Nikola Tesla
1917—John J. Carty
1918—Benjamin G. Lamme
1919—W. L. R. Emmet
1920—Michael I. Pupin

1921—Cummings C. Chesney
1922—Robert A. Millikan
1923—John W. Lieb
1924—John W. Howell
1925—Harris J. Ryan
1927—William D. Coolidge
1928—Frank B. Jewett
1929—Charles F. Scott
1930—Frank Conrad
1931—E. W. Rice, Jr.
1932—Bancroft Gherardi

1933—Arthur E. Kennelly
1934—Willis R. Whitney
1935—Lewis B. Stillwell
1936—Alex Dow
1938—Dugald C. Jackson
1939—Philip Torchio
1940—George A. Campbell
1941—John Boswell Whitehead
1942—Edwin H. Armstrong
1943—Vannevar Bush
1944—E. F. W. Alexanderson

Lamme Gold Medal. A bequest was made by the late Benjamin G. Lamme to provide for the award by the institute of a gold medal annually to a member of the A. I. E. E., "who has shown meritorious

achievement in the development of electrical apparatus or machinery."

Awards of the medal have been made as follows:

1928—Allan Bertram Field
1929—Rudolf E. Hellmund
1930—William J. Foster
1931—Guiseppe Paccioli
1932—Edward Weston
1933—Lewis B. Stillwell

1934—Henry E. Warren
1935—Vannevar Bush
1936—Frank Conrad
1937—Robert E. Doherty
1938—Marion A. Savage
1939—Norman W. Storer

1940—Comfort A. Adas
1941—Forrest E. Ricketts
1942—Joseph Slepian
1943—Arthur H. Kehoe
1944—S. H. Mortensen

CHEMICAL ACHIEVEMENT MEDALS

The Nichols Medal. Established in 1902 by William H. Nichols, the medal has been awarded to the following by the New York section of the American Chemical society: 1915, Irving Langmuir; 1916, Claude S. Hudson; 1918, Treat B. Johnson; 1920, Irving Langmuir; 1921, Gilbert N. Lewis; 1923, Thomas Midgley, Jr.; 1924, Charles A. Kraus; 1925, E. C. Franklin; 1926, Samuel C. Lind; 1927, Roger Adams; 1928, Hugh S. Taylor; 1929, W. L. Evans; 1930, S. E. Sheppard; 1931, John Arthur Wilson; 1932, J. B. Conant; 1934, Henry C. Sherman; 1935, J. A. Nieuwland; 1936, William M. Clark; 1937, F. C. Whitmore; 1938, Phoebus A. Levene; 1939, Joel H. Hildebrand; 1940, John M. Nelson; 1941, Linus Pauling; 1942, Duncan A. MacInnes; 1943, Arthur B. Lamb; 1944, Carl S. Marvel.

The Perkin Medal. Established in 1906 and first given to Sir William H. Perkin, the Perkin medal is awarded by the Society of Chemical Industry. Recipients have been: 1915, Edward Weston; 1916, Leo H. Baekeland; 1917, Ernst Twissell; 1918, Auguste J. Rossi; 1919, Frederick G. Cottrell; 1920, Charles F. Chandler; 1921, Willis R. Whitney; 1922, William M. Burton; 1923, Milton C. Whitaker; 1924, Frederick M. Becket; 1925, Hugh K. Moore; 1926, R. B. Moore; 1927, John E. Teeple; 1928, Irving Langmuir; 1929, Eugene C. Sullivan; 1930, H. H. Dow; 1931, A. D. Little; 1932, Charles F. Burgess; 1933, George Oenslager; 1934, Colin G. Fink; 1935, George O. Curme; 1936, Warren K. Lewis; 1937, Thomas Midgley, Jr.; 1938, Frank J. Tone; 1939, Walter S. Landis; 1940, Charles M. A. Stine; 1941, J. V. N. Dorr; 1942, Martin H. Ittner; 1943, Robert E. Wilson; 1944, Gaston F. DuBois; 1945, Elmer K. Bolton; 1946, Francis C. Frary.

The Grasselli Medal. Presented by the American section of the Society of Chemical Industry, and called the Grasselli medal, the medal now is known as the Chemistry Indus-

try medal. Recipients have been: 1920, Allen Rogers; 1922, Walter H. Fulweiler; 1924, B. D. Saklatwalla; 1925, E. R. Berry; 1926, Charles E. Downs; 1928, H. J. Rose; 1929, Bradley Stoughton; 1930, Per K. Frolich; 1931, L. V. Redman; 1932, George L. Clark; 1933, J. G. Vail; 1934, F. J. Metzger; 1935, E. R. Weidlein; 1936, Walter S. Landis; 1937, Evan J. Crane; 1938, J. V. N. Dorr; 1939, Robert E. Wilson; 1941, Elmer K. Bolton; 1942, Harrison E. Howe; 1943, John J. Grebe; 1944, Bradley Dewey; 1945, Sidney D. Kirkpatrick.

The Willard Gibbs Medal. Founded in 1910 and presented by the American Chemical society. Recipients have been: 1915, Arthur A. Noyes; 1916, Willis R. Whitney; 1917, Edward W. Morley; 1918, William M. Burton; 1919, William A. Noyes; 1920, F. G. Cottrell; 1921, Marie Curie; 1923, Julius Stieglitz; 1924, Gilbert N. Lewis; 1925, Moses Gomberg; 1926, James C. Irvine; 1927, John A. Abel; 1928, William D. Harkins; 1929, Claude S. Hudson; 1930, Irving Langmuir; 1931, Phoebus A. Levene; 1932, Edward C. Franklin; 1933, Richard Willstaller; 1934, Harold C. Urey; 1935, Charles A. Kraus; 1936, Roger Adams; 1937, Herbert Newby McCoy; 1938, Robert R. Williams; 1939, Donald D. Van Slyke; 1940, Vladimir N. Ipatieff; 1941, Edward A. Doisy; 1942, Thomas Midgley, Jr.; 1943, Conrad A. Elvehjem; 1944, George O. Curme, Jr.; 1945, Frank C. Whitmore.

Langmuir Medal. Established in 1931 by Arthur C. Langmuir and awarded by the American Chemical society for research work in chemistry. Awards have been: 1931, Linus Pauling; 1932, Dr. Oscar K. Rice; 1933, Dr. F. H. Spedding; 1934, Dr. C. Frederick Koelsch; 1936, John G. Kirkwood; 1937, Dr. E. B. Wilson; 1938, Paul D. Bartlett; 1940, Lawrence Olin; 1941, Karl A. Folkers; 1942, John L. Oncley; 1943, Kenneth S. Pitzer; 1944, Arthur C. Cope; 1945, Frederick T. Wall

ASTRONOMY

(Prepared especially for the National Almanac and Yearbook by Hart Wright Co.,
Clearwater, Florida)

Astronomical Facts

DEVELOPMENT OF ASTRONOMY

The study of the stars must be as old as mankind. In prehistoric times the common people recognized the groups of stars we call constellations and, from month to month, as they watched their flocks or rested under the open sky they wove fanciful tales of gods and heroes and men and women about these bright stars or groups of stars. Many of these stories have come down in writing, and from new sources we are just now learning other versions of such tales from primitive peoples.

Astrology developed early and, strange to say, persists even to this day. The ancient astrologers kept watch of the sky, and in many cases records of what they saw were used by outstanding scientists of a much later day.

Astronomy is by far the oldest of all the sciences and it probably would be conceded that it is the most spectacular and glamorous as well. The dramatic daily rising and setting of the sun, the changing phases of the moon, the prediction and verification of eclipses, the reappearance of great comets, and the steady, ordered motions of the heavens commends the subject to the layman's interest.

A few fundamental laws of the heavenly bodies such as the precession of the equinoxes, the rotation of the earth on its axis in 24 hours, and its revolution around the sun in a year were recognized early by some of the keener students of nature.

With the invention of the telescope by Galileo in 1610 a new revelation of the universe came to man and the increased knowledge of the extensive nature of the "sky"

since Galileo's time has been phenomenal. We have learned much about the earth as an astronomical body, the distances to the moon, the sun, and the planets, and of their sizes, masses, and densities. Especially in recent years our knowledge has been extended considerably in regard to the distances to the stars and nebulae, and their temperatures and astonishing physical states which are quite beyond the conditions of temperature, density, and ionization to which we can subject materials in our laboratories.

The practical benefits of astronomy to mankind have been great in furnishing accurate methods of navigation, fundamental surveys of the earth, and of timekeeping. The increase of astronomical knowledge affected greatly the thinking of civilized man. But probably the greatest contribution of all has been the readjustment of man's perspective with regard to the universe and his own position as an integral part of it.

A long succession of famous men from before the time of Hipparchus (c. 125 B.C.) through Ulugh Beigh, Copernicus, Brahe, Kepler, Newton, Herschel, to our contemporaries Hale, Adams, Russell, and Shapley—to name only a few—have given us an understanding of the astounding size and nature of the physical universe. The development of telescopes and auxiliary instruments is just now culminating in the construction of the two-hundred inch telescope. Such modern means have given us observations which in many cases have out-stripped our present powers of analysis and interpretation. Superstitious fears have given way to understanding and appreciation.

METHOD FOR MAKING CALCULATIONS

All the calculations in this Almanac and Year Book are based upon mean or civil time unless otherwise stated (See table for change to standard time.) The rising and setting of the sun and moon are for the upper limb, corrected for parallax and refraction.

The calculations in each of the geographical divisions of each calendar page will apply

with sufficient accuracy to all places in contiguous zones indicated by the heading of the divisions.

Daylight Saving—Advance one hour in May, June, July, August and September to convert into the "daylight saving time" where same is used locally.

SYMBOLS AND ABBREVIATIONS

Signs of the Planets, Etc.

☉ Sun	♀ Venus	♃ Jupiter	♆ Neptune

THE CALENDAR

From time immemorial man has used three natural units of time, the day, the month, and the year. The combination of these units to form a uniform system of time-keeping for business, scientific, and religious purposes results in a calendar.

The year we use is called the **Tropical Year** and equals the interval of time from one passage of the sun over the vernal equinox to the next. Its length is 365 days, 5 hours, 48 minutes, 45.98 seconds, that is, a little less than 365½ days. The fact that the year does not contain an even number of days (of course there is no reason why it should) and the further fact that most civilized countries use the month as the basic unit of time in all business relations brings up all the troublesome problems of devising a calendar that is accurate and convenient. This whole matter is further complicated by the use of the week or fortnight of two weeks in paying for labor or services and by certain religious festivals whose dates are fixed by the phases of the moon.

The Egyptians used the first calendar which was similar to our own. Their year consisted of twelve months of thirty days each with five additional days at the end making a year of 365 days. The year was subdivided into three seasons, Flood Time, Harvest Time, and Seed Time, containing four months each. They took 365¼ days for the natural year and knew that the Flood, Harvest, and Seed Times occurred one-fourth calendar day later for each of their calendar years. They checked their calendar year by the heliacal rising of Sirius. This gave rise to the **Sothic** or **Dog-Star** cycle of 1460 years after which period the seasons should recur in the same part of the natural year.

Saxon	English Derivation
Sun's day.....	Sunday
Moon's day.....	Monday

Saxon	English Derivation
Tiu's day.....	Tuesday
Woden's day.....	Wednesday
Thor's day.....	Thursday

Saxon	English Derivation
Frigg's day.....	Friday
Seterne's day.....	Saturday

The Julian calendar was used until the time of Pope Gregory in 1582. Since the natural year is more nearly 365.24 than 365.25 days the effect of the hundredth part of the day became quite noticeable in 1582. Accordingly Pope Gregory published a bull

The local calendar of Rome was the original form of the calendar we now use. The year of Romulus originally consisted of 304 days divided into ten months beginning with March. Numa introduced a lunar year and added January and February. The year then contained only 355 days it being 0.63 days less than twelve lunations. In order to try to keep their months in step with the lunar phases an intercalary month was introduced after February 23 when it was thought necessary, but this was not done with regularity.

Under Julius Caesar the Roman calendar had become so confused that he solicited the aid of Sosigenes, an astronomer from Alexandria, for revising the calendar. The revised calendar was purely a solar one. The normal year consisted of 365 days but every fourth year had 366 so that the value of 365¼ days, taken to be the length of the natural year, was maintained.

The months of the original calendar of Romulus were: Martius, named after Mars, the god of war and father of Romulus, Aprilis, from Aphrodite, Maius, from Maia, the mother of Mercury, and Junius, from Juno. The names of the months Quintilis, Sextilis, September, October, November, and December merely indicate the ordinal number of those months in the year. Januarius and Februarius, introduced by Numa, derive their names from the deity Janus and from "februare" meaning "to expiate," for certain ceremonies of purification were performed during Februarius. The month Quintilis was changed to July in 44 B.C. in honor of Julius Caesar and Sextilis was changed to August in 8 B.C. in honor of Augustus Caesar.

The English derivations of the days of the week are from the Saxon:

in which it was declared that Oct. 4, 1852 should be called Oct. 15 and that years divisible by 400 would henceforth not be leap years. This Gregorian Calendar is now used by virtually all civilized countries.

CHRONOLOGICAL ERAS

The year 1946 of the Christian era comprises the latter part of the 170th and the beginning of the 171st year of the independence of the United States of America, and corresponds to the year 6659 of the Julian period.

January 1, 1946, Julian calendar, corresponds to January 14, 1946, Gregorian calendar.

The year 7455 of the Byzantine era begins on September 1, 1946, Julian calendar.

The year 5707 of the Jewish era begins at sunset on September 25, 1946, Gregorian calendar.

The year 2699 since the foundation of Rome, according to Varro, begins on January 1, 1946, Julian calendar.

The year 2695 of the era of Nabonassar begins on April 24, 1946, Julian calendar.

The year 2606 of the Japanese era, being the 21st year of the period Showa, begins on January 1, 1946, Gregorian calendar.

The year 2258 of the Grecian era, or era of the Seleucidae, begins in the present-day usage of the Syrians on September 1, 1946, or on October 1, 1946, Julian calendar, according to different sects; but in the ancient usage of Damascus and Arabia Petrae the year began with the vernal equinox.

The year 1663 of the era of Diocletian begins on August 29, 1946, Julian calendar.

The year 1366 of the Mohammedan era, or era of the Hegira, begins at sunset on November 24, 1946, Gregorian calendar.

The Julian day 2,431,822 begins at Greenwich mean noon January 1, 1946, Gregorian calendar.

Explanation: This calendar is for ascertaining the day of the week for any given date from the adoption of the Gregorian new style Sept. 14, 1752,† to 2000 inclusive.

Instructions: First look in the table for the year desired (Leap years underlined). At the right under the months are figures which refer to the corresponding figures that head the seven calendars below.

Example: To find the day of the week of July 4, 1924, look in the table of years for 1924, and on the same line under July is the figure 3, which directs below to calendar 3 in which it will be seen that July 4 occurred on Friday.

*Leap years February has 29 days. †1752 same as 1758 from Sept. 14 to Dec. 31.

Copyrighted 1936 by J. A. Rasmussen.

ACCIDENTS TO SOLDIERS

The United States lost 11,500 men in uniform through accidents in 1941.

ECLIPSES FOR 1946—Cont.

Arctic regions and the extreme northern part of Europe and Asia.

5. A partial eclipse of the Sun, November 23, visible in the United States, except the western part, Canada, Greenland, Yucatan and the extreme northern part of South America. The maximum magnitude of the eclipse, visible in Greenland, will be .776.

The most favorable view in the United States of this eclipse will be in New England, where about .35 of the Sun's face will be hid at noontime. Elsewhere in the United States

the eclipse will occur a short time earlier, beginning in late morning, and will be smaller in size, tapering off to zero in the southwestern states.

6. A total eclipse of the Moon, December 8. The beginning will be visible in the northwestern part of North America, New Zealand, Australia, Asia, Europe and Africa. The ending will be visible in the extreme northwestern part of North America, Australia, Asia, Europe and Africa. No part of the eclipse will be visible in the United States.

COMETS

"Stellae cometae," meaning "hairy stars," is a name formerly given to **comets**. For many years these objects were considered as omens of ill luck and were regarded with awe and a feeling of unrest by superstitious people. Now we know that the comets are not sent by a wrathful god but are objects moving under the same well established principles which govern the motions of the planets and, indeed, all terrestrial as well as celestial phenomena.

On the average five or six are discovered each year. Some years have added none while 1932 gave us the maximum number for any year—13 new comets. About 1,000 comets have been observed. Most of these are seen only in the telescope; only about one in five becomes bright enough to be seen with the naked eye. Occasionally, such as Halley's for example, they become bright enough to be seen in full sunlight.

Their origin is uncertain. We have no evidence that any comet has come from interstellar space; most of them are definitely a part of our solar system.

When first discovered a comet is a hazy patch of light, moving on a background of stars; as it comes nearer the earth a brighter central portion—the nucleus—appears; a tail may also develop. These features increase in prominence until the comet reaches perihelion when the nucleus and tail begin to fade and the object disappears as a fuzzy ball. Since

the tail is composed of particles ejected from the comet by the pressure of the sun's light, it is always directed away from the sun. The nucleus is generally a few hundred miles in diameter but may be as large as several thousand; the tail, usually a few million miles long, may be many millions.

The amount of matter in comets must be exceedingly small, for they pass near planets without affecting their motion. The objects are so tenuous that stars can be seen through them without being appreciably diminished in brightness. The total amount of material in comets must certainly be less than one millionth that in the earth, nevertheless the comets may weight as much as a million tons.

By studying the light from these objects we have found that they shine mostly by their own light. They send us only a little reflected sunlight. The nature of the light tells us that they are composed of compounds of carbon and also that they contain iron, magnesium and sodium.

There is only a negligible possibility of a comet striking the earth. It would not happen more than once in fifteen million years, but if such a catastrophe should occur it would destroy life and land for many miles around the point of impact. The earth would probably receive a scar similar to Meteor Crater in Arizona, which seems to have been formed by a small comet or large meteor.

METEORS

Meteors can be seen on almost any clear night as swiftly moving streaks of light. We call the faint ones **shooting stars**, popularly, and the bright ones **fire balls**. The brightest fire balls are sometimes bright enough to cast shadows.

Meteors are not stars but merely small stones or rocks swept up by the earth as it revolves about the sun. Friction with the air raises the temperature of the surface of a meteor high enough to make it self-luminous. Most of them burn up completely before striking the earth's surface. Occasionally one of these stones reaches the ground; such an object is then called a **meteorite**.

It is estimated that if we could watch the whole sky we could count several million naked eye meteors each day. With the telescope many more can be seen that are too faint to be seen with the eye alone.

The shooting stars begin to glow at an altitude of about 80 miles and burn out at about 50 miles. The limits of altitude for fire balls are from 100 to 10 miles. Velocities of meteors range from 10 to 50 miles per second.

Practically all random meteors are from interstellar space but many others come in showers and are definitely a part of the solar system. **Meteor showers** result from the

earth's passage through a swarm of meteoric material revolving about the sun. The trails of those meteors belonging to showers diverge radially from a point in the sky. The shower is usually given a name corresponding to the constellation in which this point, the **Radiant**, lies. Some showers are associated with comets and some are known to have originated from the disintegration of comets. The following is a list of the dates of the principal meteor showers:

Quadrantids	Jan.	20	Orionids	Oct.	20	G
Lyrids	Apr.	20	Leonids	Nov.	14	G
Aquarids I.	May	6	Andromedes	Nov.	24	G
Aquarids II.	July	28	Geminids	Dec.	10	G
Perseids	Aug.	12				

The amount of material added to the earth by meteors per day is less than one hundred tons. At this rate one million years would be required to give a layer one inch thick all over the earth. The effect of this on the length of the year or day would be negligible.

The faint **zodiacal light** is also connected with the subject of meteors because it is caused by the reflection of sunlight from meteoric material distributed along the ecliptic.

THE EQUATION OF TIME

TABLE OF TIME CORRECTIONS

In the calendar pages of the almanac the rising and setting of the sun and moon are given in local civil time and to obtain the standard time of these and other astronomical events at any given place it is necessary to subtract or add a certain number of minutes according to the distance the place in question is east or west of the meridian whose time governs the zone in which the place is located. Thus for Chicago, which is approximately two and a half degrees east

of the 90th meridian, which governs the time of the central zone, ten minutes must be subtracted to get the actual standard time as shown by the clock.

The corrections to be applied to local time for conversion to standard time are shown in the following table. The abbreviations are E. for eastern, C. for central, M. for mountain and P. for Pacific time. Add or subtract as indicated by the sign.

The Solar System

The **Solar System** is the assemblage of asteroids, comets, meteoric material, and planets with their attendant satellites which form a family of objects intimately connected with the sun and practically isolated from the other stars.

We have three chief theories of the origin of the solar system: (1) La Place's **Nebular Hypothesis** supposed the sun to have been a huge gaseous nebula large enough to include all the planets. This nebula then contracted, leaving rings of material which condensed to form the planets. This theory has been largely abandoned in favor of (2) the **Planetesimal Hypothesis** of Chamberlin and Moulton or the similar (3) **Tidal Theory** of Jeans. Both later theories assume another star passed very near the sun; tides, due to the attraction of the other star, were strong enough to cause material to be ejected from the sun. In the planetesimal hypothesis the ejected matter was left in swarms of solid particles from which the planets formed by accretion. The tidal theory assumes the planets to have been almost of their present mass from the time of origin and to have condensed from the original gaseous masses torn from the sun. Neither of these theories is adequate to explain all the characteristics of the solar system; in fact there is no sound theory at present. To explain satisfactorily the origin of the solar system the theory must account for these general characteristics:

- (1) All the planets revolve about the sun in the same direction.
- (2) The orbits of all the planets are nearly circular and lie nearly in the same plane.
- (3) The distances of the planets from the sun.

(4) The sun rotates in the direction of the planets and its equator is almost in the plane of their orbits.

(5) The massive planets are of the lowest density.

(6) The largest planets rotate most rapidly.

(7) The satellites revolve in the direction in which the planets rotate.

(8) The orbits of the satellites are nearly circular and in the plane of the equator of their planet.

In addition the theory must be able to explain certain special characteristics as:

- (1) The asteroids.
- (2) Comets and meteoric swarms.
- (3) The ring system of Saturn.
- (4) The high inclinations of the orbits, and retrograde motion of certain satellites.
- (5) One of the moons of Mars rotates faster than the planet.

The bright planets have been known to man from remote antiquity so that we have no record of their discovery. For the telescopic planets we have the record below, which includes planet, computer, discoverer and discovery date:

Uranus—No computer, William Herschel, Mar. 13, 1781.

Neptune—Adams and Leverrier, Galle, Sept. 23, 1846.

Pluto—Lowell, Tombaugh, Mar. 13, 1930.

The principles of celestial mechanics show that there is no danger of the planets falling into the sun or colliding with each other. The great age of the solar system testifies to its stability, but mutual perturbations will ultimately change the details of the motions of the planets.

*The distance given for the moon is the mean distance from the earth in miles.

†The sidereal period given for the moon is in days.

†The semidiameters are for the following distances: for the sun and moon, mean distance; for the planets, mean least distance.

PLANETARY PHENOMENA, 1946**Central Standard Time****Earth**

Perihelion—Jan. 2, 12 noon.	Autumnal Equinox—Sept. 23, 9:41 A.M.
Aphelion—July 3, 12:59 A.M.	Autumn begins.
Vernal Equinox—Mar. 20, 11:33 P.M.	Winter Solstice—Dec. 22, 4:54 A.M.
Spring begins.	Winter begins.
Summer Solstice—June 21, 6:45 P.M.	
Summer begins.	

Venus

Superior Conjunction—Feb. 1.	Brightest—Oct. 13, Dec. 23.
Greatest Elongation East—Sept. 8.	Stationary—Oct. 28.
	Inferior Conjunction—Nov. 17.

Mars

Nearest Earth—Jan. 1.	Stationary—Feb. 21.
Opposition—Jan. 13.	

Jupiter

Stationary—Feb. 11, June 15.	Conjunction—Oct. 31.
Opposition—Apr. 12.	

Saturn

Opposition—Jan. 11.	Conjunction—July 21.
Stationary—Mar. 19.	

MORNING AND EVENING STARS, 1946**Morning Stars**

MERCURY—A few days before and after April 23, August 20 and December 9.	JUPITER—January 1 to April 12 and October 31 to December 31.
VENUS—January 1 to February 1 and November 17 to December 31.	SATURN—January 1 to 12 and July 21 to December 31.
MARS—January 1 to 13.	

Evening Stars

MERCURY—A few days before and after March 9, July 5 and October 31.	MARS—January 13 to December 31.
VENUS—February 1 to November 17.	JUPITER—April 12 to October 31.
	SATURN—January 12 to July 21.

Brightest or Best Seen

MERCURY—As an Evening Star March 2 to 16, setting about an hour after the Sun near the sunset point of the horizon; also, as a Morning Star August 13 to 27, rising about an hour before the Sun near the sunrise point of the horizon.	and December 23 as a Morning Star.
VENUS—October 13 as an Evening Star	MARS—In January when shining all night.
	JUPITER—In April when opposite the Sun and shining all night.
	SATURN—In January when shining as an all night star.

Dim or Invisible

MERCURY—At all other times than those given above.	JUPITER—October 15 to November 15.
VENUS—February 1 and November 17, when in line with the Sun.	SATURN—In July.
MARS—In December.	URANUS, NEPTUNE and PLUTO—At all times to the naked eye.

ECLIPSES

The fewest possible number of eclipses for any one year is two, both solar; the largest number is seven, five of the sun and two of the moon. Although solar eclipses occur more frequently than lunar ones, they are seen by very few people because the path of totality for a solar eclipse is only about 60 or 70 miles wide. On the other hand a lunar eclipse may be viewed by inhabitants of over half the globe. The maximum duration of a total eclipse of the sun is about seven minutes; a lunar eclipse may be total for as long as an hour and 40 minutes.

NOTE:—To make use of the above table in connection with the chart of the heavens proceed as follows: Suppose the position of Venus for May 11 is desired. Right ascension for that date is V hours. Locate that point on the outer margin of the chart and upon connecting this point, by a straight edge, as a ruler or envelope edge, with the north star, the line will cross the "ecliptic circle" at a point north of the Belt of Orion, where she may be found at that time; or Mars close to Regulus, in the Sickle of Leo, June 1. Civil time is used. Proceed in same manner with the use of the Planet Chart.

LIFE ON OTHER PLANETS?

Conditions on the planet Jupiter and planets farther from the sun are such as to preclude the possibility of the existence of life upon them. The Moon and Mercury do not possess atmospheres and are under conditions of temperature which would not permit life. Venus and Mars are the only globes in our planetary system, other than the earth, which could support life as we know it, but we have no conclusive evidence that

life exists on either. Neither have we proof that it does not exist, but the latter conclusion is the more favored. Astronomers do not speculate on the possibility of life existing in some unknown form.

No thinking astronomer is contemplating trips to the moon or other members of the solar system or has any reliance in any of the modes of transportation vaguely outlined in popular literature.

CANADA'S LAKE AREA

Canada's lakes have a greater area than all the land in New Zealand.

FINDING STANDARD TIME

To find the standard time for any place on the list below add or subtract the time interval as indicated by the (+) or (-) sign from Central Standard Time.

Example: If it is 6 P.M., C.S.T. Monday the time at Hong Kong is 14 hours later, which will be 8 A.M. Tuesday.

THE MOON IN DAYTIME

In the following calendar the time of moonrise or moonset is given only if it happens during the night hours. To find the approximate time of moonrise (or moonset) during the daylight hours take the difference between the time when the moon was on the meridian and the time of moonset (or moonrise) and apply the difference to the time of moon in the meridian in the reverse direction.

STARS

The accompanying chart shows the positions and configurations of several hundred of the brightest stars in the constellations visible in northern latitudes. Over the whole sky there are about 10,000 stars which can be seen with the naked eye; only about one-third of these can be seen at any one time. Through the telescope a great many more stars are found. Almost a billion stars can be photographed with the one-hundred inch telescope at Mount Wilson. It is estimated that in our Milky Way System there are in all about thirty-thousand million stars.

The stars are classed according to the amount of light we receive from them. The brightest ones seen by the naked eye are zero and first magnitude stars and the faintest ones the eye can see are of the sixth or seventh magnitude. With the 100-inch telescope stars of the twenty-first magnitude can be photographed. The 200-inch telescope will be able to photograph stars to the twenty-second or twenty-third magnitude and will increase the number of stars observable to about one and one-half billion. All the stars taken together give us only as much light as about eleven hundred standard first magnitude stars; this is one-hundredth the light of the full moon.

The stars are also classified according to the quality of the light they emit. This classification is carried out by examining the **spectrum** formed from the light of the star. Stars are placed in arbitrary spectral classes designated by the letters O, B, A, F, G, K, M, N, R, and S which in that order correspond to decreasing temperatures of the stellar atmospheres.

Each one of these millions of stars is similar in character to our sun which is itself a typical star. Most of the stars we see are actually very bright, but appear faint merely because of their tremendous distances. One of the main problems of present day astronomers is devising methods of determining how bright stars actually are intrinsically so that the stellar distances can be calculated.

Stars vary considerably in the density of their constituent material, in temperature, and in brightness but are remarkably little different in the amount of matter they contain. The brightest stars are a hundred million times brighter than the faintest; the temperatures of their atmospheres range from 4000° F. to 36,000° F., but the "heaviest" is only about two hundred times heavier than the "lightest." It is not correct to speak of stars as being "heavy" or "light" because these terms refer to the weight of objects on the earth. We cannot weigh the stars in this sense so we must say that the ratio of the quantity of matter or **mass** of these stars is one to two hundred. The temperatures at the centers of the stars may be as high as 40,000,000 degrees.

The stars are so very remote that it is convenient to express their distances in terms of the time required for their light to reach us. Light travels 186,000 miles in one second but with this tremendous velocity four and two-tenths light years are required for the

light to come from the nearest known star, Proxima Centauri. Therefore we say that it is four and two-tenths **light years** distant. The average distance to the faintest stars visible to the naked eye is three-hundred light years.

Visual examination of many of the stars with large telescopes has revealed a large number of **double stars**—two stars which are held together by their mutual force of gravity and revolve forever about their common center of gravity in the same manner that the planets revolve about the sun. One great catalogue lists over seventeen thousand double stars most of which are physically connected. The spectra of still more stars examined with the spectrograph attached to large telescopes have shown many more stars which cannot be seen double to be actually of that nature. Over 1,000 of these **spectroscopic binaries** have been discovered. About one star in eighteen is a visual double star and about one in five a spectroscopic binary.

The diameters of some of the largest nearby stars have been successfully measured with the interferometer, and the huge, cool, red **giant** star, Antares, in Scorpio has been found to have a diameter 430 times the radius of the sun or larger than that of the orbit of Mars.

The Dog Star, Sirius, has a very faint companion star known as a **white dwarf**; its diameter must be less than that of the planet Neptune and the average density of its material is fifty thousand times that of water. A cubic inch of this matter on the earth would weigh two tons.

There are several thousand **variable** stars—stars which do not always send us the same amount of light. The light from some of these stars changes with a regular period so that the brightness at any future date can be determined for these **regular variables**. The interval between times of two successive brightest stages may be anywhere from half a day to two or more years.

Besides the regular variables we also find **irregular variables** and occasionally a **nova** or temporary star. The latter is a star which suddenly increases enormously in brightness and then more slowly reverts to a faint star more or less constant in its light. The increase in brightness of a nova may be ten thousand to one million times its original value. It is impossible to predict when a nova may appear so that astronomers, professional and amateur, are always on the lookout for a new star in the sky.

For the layman the stars can be considered fixed as we see them in the sky. Careful measurements made over a number of years show that the stars move very slightly with respect to each other. These **proper motions** will not change the configurations of the stars for thousands of years. Studies of these motions gave astronomers, many years ago, the information that the sun is moving with its planets toward the constellation Hercules at a velocity of thirteen miles per second.

Corn Harvest Calendar

January—New South Wales.
March and April—Argentina.
April and May—South Africa.

Sept.—Oct.—All European countries.
October—Crop of the United States is principally harvested in this month.

DIRECTIONS FOR THE STAR CHART

To use the chart, face south, hold the chart over your head with the appropriate date at the bottom. In this position the chart shows the relative positions of the constellations as seen at nine o'clock in the evening. For an earlier hour turn the chart clockwise, for a later hour counterclockwise (each space marked by a month corresponds to two hours). The constellations at the top of the diagram will not be visible because they are below the northern horizon.

Most of the stars on the accompanying list appear on the chart and may be identified from their right ascensions, declinations, and magnitudes.

Right ascension is measured clockwise around the diagram through twenty-four hours starting with the Vernal Equinox. Declination is measured from the circle marked "Equator" along a line through the North Pole—toward the pole if positive (+), away from the pole if negative (—).

The planets may be found by taking their right ascensions for the appropriate date from the table. Imagine a line from the north pole to the point on the right ascension circle which reads the right ascension of the planet. The planet will lie near the point where this line crosses the circle marked "Ecliptic."

TYPES OF UNDERGROUND COAL MINES IN THE UNITED STATES

Underground coal mines are divided into three classes, according to the method of access. The three classes are shaft mines, slope mines and drift mines.

WORLD-FAMOUS TELESCOPES AND OBSERVATORIES

Telescopes are of two types: The refractors, in which the light is transmitted through and brought to a focus by a lens or combination of lenses; and the reflectors, in which the light is reflected from and brought to a focus by a concave mirror or combination

of mirrors. The image formed at the focus of the lens or mirror is real and may be magnified by an eye piece or photographed. The following list, largely from the United States Naval observatory, gives the largest and best known of both types:

Observatory	Location	Institution	Date Estab.	—Refractors—	
				Size of Lens in Inches	Focal Lgth. in Ft.
Yerkes	Williams Bay, Wis.	University of Chicago	1897	40.0	63.5

THE MOON

The earth's only satellite is at a mean distance of 238,857 miles. At **perigee** when the moon is nearest the earth the distance is only 221,463 miles and at **apogee** when it is farthest away the distance is 252,710 miles.

The moon is a sphere of lifeless rock 2,160 miles in diameter, whose surface is seen through a telescope to be pitted with small and large craters somewhat resembling volcanic craters on the earth; mountain ranges, lofty peaks and other markings are also seen. The moon has no water or atmosphere. The regions which appear dark to the unaided eye are actually very smooth compared to the lighter areas, the difference in appearance is due to the amount of sunlight reflected. Very unlike the sun, the moon gives off no light of its own but is seen only by the sunlight it reflects to us. We receive from the sun 465,000 times as much visible light as we get from the moon. If the whole sky were as bright as the full moon we would receive only one-fifth as much light as from the sun.

Besides giving us moonlight and causing tides, the moon also produces slight changes in atmospheric pressure and definite changes in terrestrial magnetism and radio reception. Although numerous experiments have been made to detect an effect of the moon on the weather, no such effect has been found, and the many popular beliefs in the effect of the moon on the weather and the various conditions of life are certainly unverified.

The **Harvest Moon** is the full moon which occurs nearest the time of the **Autumnal Equinox** and the **Hunter's Moon** is the next following one. The peculiarity of the harvest moon is that the moon rises but little later each night at this time of year.

When the moon is new or full, that is when the sun, earth, and the moon are nearly in line we have the greatest tides called the **spring tides**; when the moon is at **quadrature**, that is, when the sun, earth, and moon make a right angle, we have the least or **neap tides**. The water is rising at **flood tide** and falling at **ebb tide**. Successive high waters come at intervals of 12½ hours or half the moon's period of revolution. Since time is required for the large mass of water in the **tidal wave** to flow, there is a lag called the **establishment of port** which amounts to about six hours between the passage of the moon across the meridian and the time of high water. The sun's tide raising influence is nearly five-elevenths that of the moon.

The moon turns on its axis once during its revolution so that the same face is always towards the earth. This is not strictly true because of certain geometrical and physical characteristics of the earth-moon system which permit us to see 59 per cent of the moon's surface. The remaining 41 per cent never has been seen.

THE SUN

The sun is a gaseous body with characteristics typical of the other stars in the heavens. The sun is self-luminous; that is, it is visible to us by radiation generated within itself. There are several theories for the origin of the sun's radiant energy, but the only theory which is in keeping with the probable age of the sun as derived from the geological age of the earth is that the radiation is maintained by an actual loss of the sun's mass. Theory indicates that the sun could liberate energy at its present rate of 580,000,000,000,000 horsepower for one million million years and lose only 7 per cent of its mass.

The outer layers of gas surrounding the sun are extremely rarified and relatively cool; as we go deeper into the sun's interior the pressure and temperature increase enormously. At the center of the sun the temperature is probably as high as 35,000,000 degrees Fahrenheit and the pressure 1,300,000,000 times as great as the air pressure at the surface of the earth, while just above the **photosphere**, the portion which we see, the temperature is about 11,000 degrees Fahrenheit and the pressure less than one ten-thousandth that of the atmospheric pressure here on earth.

Spectroscopic study has shown that of the 92 elements in the periodic table all but 34 can be detected in the solar atmosphere. It is most probable that all the others are present in the sun but cannot be detected for various reasons.

The atmosphere of the sun is in a constant state of agitation due to storms, which may

be considered somewhat similar to cyclones and hurricanes on the earth. With this condition of disturbance hot columns of gas rise in vortical motion; due to an increase in velocity as the gases approach the surface the centers of the vortices are much cooled and appear dark against the sun's surface, although they are at temperatures of 8,800 degrees Fahrenheit. These cooler areas we call **sun spots** and they may be as large as 150,000 miles in diameter with the central darkest portion 50,000 miles across. Almost always a few small ones can be seen through a telescope. The largest ones can be seen with the unaided eye. Sun spots occur in a cycle of between 11 and 12 years. The year 1946 is approaching a sun spot maximum.

All of us are familiar with the rising and setting of the sun due to the daily rotation of the earth. Some few of us may not realize that it is because the sun is higher at noon in summer than in winter that we get the regular succession of the seasons, and still more of us may not know that the sun contributes five-elevenths as much tidal action as the moon. The sun also affects man in other ways not so obvious. Sun spots have been shown to exhibit electrical and magnetic properties and it has been shown that magnetic storms on the earth correspond to the 11-year sun spot cycle. The magnetic storms on the earth often interfere with radio, telegraph and telephone communication and also are intimately connected with auroral displays. The sun is the ultimate source of all our energy.

EXTRA-GALACTIC SYSTEMS

The only naked eye objects which do not belong to our galaxy are the two **Magellanic Clouds**, which are seen as detached portions of the Milky Way in southern latitudes, and the Great Nebula in Andromeda (see star chart for its location). The former are the nearest objects without our galaxy and the Andromeda nebula at a distance of nine-hundred thousand light years is one of the next nearest systems.

The Magellanic Clouds are **irregular extra-galactic nebulae** and the Andromeda Nebula is typical of the **spiral nebulae**. Both types of objects are composed of stars, star clusters, and obscuring clouds of gas such as are found in our galaxy. The Magellanic Clouds are about one-tenth and the Andromeda Nebula about one-half the size of our galaxy which seems to be larger than any such system known.

The most distant known spiral nebula is over one-hundred million light years away.

It is found that the light of the spiral nebulae presents a characteristic which can be interpreted as being due to the velocity of these objects. On these grounds it is found that the distant galaxies are all moving away from our galaxy and the speeds with which they recede are proportional to their distances. This has led to the theory of the **expansion of the universe**.

Astronomers at Mount Wilson have concluded that the extra-galactic nebulae are quite uniformly distributed in space. There are, however, definite local clusters in which hundreds of nebulae can be found. Near the galactic poles, in which direction there is a minimum of obscuring matter, 1780 of these nebulae can be found per square degree. This would mean that over the whole sky seventy-five million would be within reach of the 100-inch telescope were it not for obscuring matter in the direction of the Milky Way.

PLANETARIA OF THE U. S.

The first planetarium, the invention of Dr. Walter Bauersfeld of Jena, was erected in Munich in 1925. Six other German cities followed the Munich plan the next year. The Adler Planetarium in Chicago, the gift of Max Adler, was the first to be erected in the United States. Three years later the second American planetarium was erected.

It is named for Samuel S. Fels and located in the Franklin Institute in Philadelphia. The third is in Griffith park, Los Angeles, and is the gift of Gov. Griffith J. Griffith of California. The fourth is the Hayden Planetarium in New York city, made possible by the gift of \$150,000 from Charles Hayden.

THE SEVEN LIBERAL ARTS

The "seven liberal arts" according to educators in the middle ages were usually classified as grammar, dialectics, rhetoric, music, arithmetic, geometry and astronomy. In modern universities the arts are distin-

guished from divinity, law, medicine and science. The terms "bachelor of arts" and "master of arts" originated from the old classifications.

THE TWO-HUNDRED INCH TELESCOPE

Dr. George Ellery Hale, honorary director of the Mount Wilson observatory and chairman of the Observatory council of the California Institute of Technology is building for the third time the world's greatest telescope. It was through his efforts that the Yerkes and Mount Wilson observatories were built and he served as the first director of each.

The 200-inch telescope is being built from a grant of \$6,000,000 provided in 1928 by the Rockefeller Foundation.

Several years were spent in experimenting with fused quartz before it was finally decided to make the world's largest piece of glass out of Pyrex. Dr. George V. McCauley directed the work of making the huge disc which was poured Dec. 2, 1934. It was then kept in an annealing kiln until Dec. 8, 1935, during which time the molten glass, originally at a temperature of 2800° F., gradually cooled to room temperature. The disc was shipped from Corning March 26, 1936, on a special train. The train took a carefully planned route and travelled with a maximum speed of 25 miles per hour. It arrived in Pasadena April 10, 1936.

The design and construction of astronomical telescopes requires the finest of the mechanics' and opticians' skill. The building of a large telescope, especially one of the proportions of the 200-inch, also taxes the resourcefulness of the engineer.

The delicate operation of grinding and polishing the front surface of the disc to a paraboloidal surface within a tolerance of one millionth of an inch is in progress at the optical shop of the California Institute of Technology. In the final stages of polishing the work must go very slowly, because it is necessary to test the mirror after each few minutes of polishing. Before testing

several hours are required for the glass to come to uniform temperature after the heating caused by the polishing operation.

The back of the mirror is honeycombed to reduce the weight of the disc, to provide the most rapid temperature equalization, and to accommodate the elaborate support system which prevents the mirror from sagging under its own weight.

The mounting of the 200-inch was built by the Westinghouse Electric and Manufacturing company. The U-shaped upper bearing of the telescope is 46 feet in outside diameter and weighs 175 tons, the 57 foot tube weighs 88 tons, and the whole mounting will weigh about 450 tons. The mirror itself weighs 20 tons.

It is expected that the telescope will be completed in 1946. Meanwhile the work of designing and building auxiliary apparatus is under way.

The site of the telescope is Palomar Mountain, 93 miles south of Pasadena and 50 miles north of San Diego.

The purpose of building a larger telescope is not to obtain higher magnification in order to see the moon and planets in greater detail. The maximum usable magnification is limited by currents in our atmosphere and we already have many telescopes which could use much higher magnification than the state of the atmosphere will permit. The 200-inch is being built so that the astronomers will be able to collect more light from the faint objects which they observe. Having twice the aperture of the 100-inch the 200-inch will make stars appear four times as bright and will render observable a volume of space 27 times that of the Mount Wilson telescope.

LATITUDE AND LONGITUDE

The latitude of a place on the earth is the number of degrees the place lies north or south of the equator.

The longitude of a place is the number of degrees measured east or west along the equator from the meridian of Greenwich to the meridian of the place.

The simplest way to get a rough value of the latitude or longitude of a place is to read it from any good map. The latitude and longitude may be determined quite accurately astronomically by the following methods:

The altitude of the pole is equal to the latitude of the observer; this gives a simple way to get the latitude. As may be seen from the table of bright stars, the North Star, Polaris, has a declination of +88° 58'. By subtracting this from 90° 0' we see that Polaris is 1° 2' from the pole. Consequently, each sidereal day Polaris describes a circle of radius 1° 2' about the pole. If the altitude of the North Star is measured when Polaris is at the lowest part of this circle and we add 1° 2' to that angle, the latitude is the result. If the altitude is measured when Polaris is at the top of the circle the 1° 2' must be subtracted.

Polaris is at the lowest part of its circle 20 minutes after γ Ursae Majoris is above the pole on the meridian and at the upper part of its circle 48 minutes after γ Cassiopeia is on the meridian. Therefore if we wait until one of these stars is directly above the pole, without knowing the time, we know that Polaris is near the bottom or top of its circle. It will be helpful to find these stars on the chart.

The difference between the local time, be

it mean or sidereal, gives the difference between the longitudes of any two places on the earth. One hour on either time system corresponds to 15 degrees in longitude.

If we have a watch set to read standard time and note the time when the sun is on the meridian we have the **Standard Mean Time of Local Apparent Noon**. If we obtain the equation of time for the date from the graph and subtract it with its proper sign (+ or -) from 12 hours, which is the **Apparent Solar Time**, we get the **Local Mean Time** of the location. The difference between the local mean time and the standard time gives the number of minutes from the standard meridian. If the local time is greater than the standard the station is east of the standard meridian. If the local time is less the station is west.

Examples:

The altitude of Polaris at upper culmination was found to be	38°	26'
The polar distance of Polaris	1°	2'
Therefore, the latitude is	37°	24'
June 30 the equation of time is	-3m	
Therefore the local mean time is subtracting -3m)	12h	3m
The sun was observed to be on the meridian at (Eastern Standard Time)	12h	16m
Therefore the observer is west of the standard meridian by		13m
The difference of 13 minutes corresponds to	3¼°	
The longitude of the Eastern Standard Meridian is	75°	
Therefore, the observer's location is at longitude	78¼°	
west of Greenwich.

THE MILKY WAY

The **Milky Way** as we see it in the sky is the projection of our **Galaxy** on the celestial sphere. It is a faintly luminous band of light which passes through the following constellations which can be seen from northern latitudes: Aquila, Cygnus, Cassiopeia, Perseus, Auriga, between Orion and Gemini, to Sagittarius and Scorpio. This path may be easily traced on the celestial chart in an earlier part of this Almanac. Even a small telescope shows this band to be composed of a very large number of faint stars. All the stars we can see with the naked eye together with the telescopic stars form a gigantic system shaped like a watch which we call our **Milky Way System**.

This system has a diameter as determined from the distances to globular star clusters of about two hundred and fifty thousand light years, a thickness of fifty thousand, and the sun is about fifty thousand light

years from the center which lies in the direction of the constellation Sagittarius. Other data give a size of about one half these proportions.

It has already been mentioned that this system is composed of great numbers of stars of widely varying brightnesses, temperature, size, and density. Within it there are in addition to these stars many groups of stars—**star clusters**—some of which are densely packed, almost spherical aggregations while others occur in looser irregular groups. **Galactic Nebulae** which are dark and bright clouds of gas and dust may be found especially in the direction of the Milky Way. This whole assemblage is permeated by veiling clouds of almost imperceptible interstellar gases and cosmic dust which prevent us from seeing objects far in the interior of our galaxy.

Weather

STORM-WARNING SIGNALS

Source: Weather Bureau, Department of Agriculture

Small Craft Warning—A red pennant indicates that moderately strong winds that will interfere with the safe operation of small craft are expected. No night display of small craft warnings is made.

Northeast Storm Warning—A red pennant above a square red flag with black center displayed by day or two red lanterns, one above the other, displayed by night, indicates the approach of a storm of marked violence with winds beginning from the northeast.

Southeast Storm Warning—A red pennant below a square red flag with black center displayed by day or one red lantern displayed by night indicates the approach of a storm of marked violence with winds beginning from the southeast.

Southwest Storm Warning—A white pennant below a square red flag with black

center displayed by day or a white lantern below a red lantern displayed by night indicates the approach of a storm of marked violence with winds beginning from the southwest.

Northwest Storm Warning—A white pennant above a square red flag with black center displayed by day or a white lantern above a red lantern displayed by night indicates the approach of a storm of marked violence with winds beginning from the northwest.

Hurricane or Whole Gale Warning—Two square flags, red with black centers; one above the other, displayed by day, or two red lanterns, with a white lantern between, displayed by night, indicate the approach of a tropical hurricane or of one of the extremely severe and dangerous storms which occasionally move across the great lakes.

Scale of Wind Force

The following Beaufort wind scale is used in expressing weather bureau forecasts:

Design't'n	Mi. per hr.	Design't'n	Mi. per hr.	Design't'n	Mi. per hr.	Design't'n	Mi. per hr.
Calm.....	Less than 1	Moderate.....	13 to 18	Strong.....	25 to 38	Whole gale.....	55 to 75
Light.....	1 to 7	Fresh.....	19 to 24	Gale.....	39 to 54	Hurricane.....	Above 75
Gentle.....	8 to 12						

Storm-Warning Signals—Day

Storm-warning flags are displayed during the day and lanterns at night at a large number of stations along the coasts and on the great lakes. Explanations of these displays follow:

Small craft N. E. storm S. E. storm S. W. storm N. W. storm Hurricane or whole gale

WEATHER REPORTS AND FORECASTS

The forecast operations of the Weather bureau of the U. S. Department of Agriculture are based upon observations of the weather taken at more than 300 points of observation, at the same moment of time, in the United States, Canada, Alaska, the West Indies and Mexico, on ships at sea, and from airplanes that are sent aloft for observational purposes. In addition, small free-air balloons are released at a large number of places for the observation of wind direction and velocity.

The observations from all sources are telegraphed, sent by teletype, or otherwise collected at distributing stations, and thence sent to all points where they will be of assistance in serving the various interests and in the formulating of the official weather forecasts. They give data relative to barometric pressure, temperature, precipitation, winds, clouds, visibility, and miscellaneous weather phenomena, and are entered on outline charts of the United States, the northern hemisphere, and the surrounding waters. From these charts the forecaster formulates his

weather forecasts. The forecasts are issued twice daily for every state in the Union and the Great Lakes and coastal waters from six district forecast centers, situated at Chicago, Ill.; Denver, Colo.; Jacksonville, Fla.; New Orleans, La.; San Francisco, Calif.; and Washington, D. C., and these take care of the regular weather and temperature forecasts for the general public, including special storm, small craft, frost, cold wave, and many special kinds of forecasts for various interests.

In addition, there are 11 special collecting and distributing centers for service in the interest of aviation. That service includes the issue of flying forecasts every six hours, and many special intermediate forecasts covering trips by air over various routes at irregular hours. These centers are situated at Arlington, Va.; Atlanta, Ga.; Burbank, Calif.; Chicago, Ill.; Cleveland, Ohio; Fort Worth, Tex.; Kansas City, Mo.; Newark, N. J.; Oakland, Calif.; Portland, Ore.; and Salt Lake City, Utah.

WIND BAROMETER TABLE

Source: U. S. Weather bureau

The wind and barometer indications for the United States are generally summarized in the following table:

Wind Direction	Barometer Reduced to Sea Level	Character of Weather Indicated
SW. to NW.	30.10 to 30.20 and steady	Fair, with slight temperature changes, for 1 to 2 days.
SW. to NW.	30.10 to 30.20 and rising rapidly	Fair, followed within 2 days by rain.
SW. to NW.	30.20 and above and stationary	Continued fair, with no decided temperature change.
SW. to NW.	30.20 and above and falling slowly	Slowly rising temperature and fair for 2 days.
S. to SE.	30.10 to 30.20 and falling slowly	Rain within 24 hours.
S. to SE.	30.10 to 30.20 and falling rapidly	Wind increasing in force, with rain within 12 to 24 hours.
SE. to NE.	30.10 to 30.20 and falling slowly	Rain in 12 to 18 hours.
SE. to NE.	30.10 to 30.20 and falling rapidly	Increasing wind, and rain within 12 hours.
E. to NE.	30.10 and above and falling slowly	In summer, with light winds, rain may not fall for several days. In winter, rain within 24 hours.
E. to NE.	30.10 and above and falling rapidly	In summer, rain probable within 12 to 24 hours. In winter, rain or snow, with increasing winds, will often set in when the barometer begins to fall and the wind sets in from the NE.
SE. to NE.	30.00 or below and falling slowly	Rain will continue 1 to 2 days.
SE. to NE.	30.00 or below and falling rapidly	Rain, with high wind, followed, within 36 hours, by clearing, and in winter by colder.
S. to SW.	30.00 or below and rising slowly	Clearing within a few hours, and fair for several days.
S. to E.	29.80 or below and falling rapidly	Severe storm imminent, followed, within 24 hours, by clearing, and in winter by colder.
E. to N.	29.80 or below and falling rapidly	Severe northeast gale and heavy precipitation; in winter, heavy snow, followed by a cold wave.
Going to W.	29.80 or below and rising rapidly	Clearing and colder.

THE EARTH'S ATMOSPHERE

The atmosphere serves as a protecting layer to shield us from harmful rays of the sun and to help equalize the temperature through the day and night. If it were of the same density throughout as it is at the surface of the earth the air would extend to a height of only five miles, but we know the pressure and density decrease markedly with altitude. Observations of meteors show that the air must extend at least to an altitude of 120 miles. Beyond this height the air is extremely rarefied.

At the surface of the earth the air contains about 76 per cent nitrogen, 20 per cent oxygen, 2.6 per cent water vapor, 1 per cent argon, and small amounts of carbon dioxide, hydrogen, helium, and other rare gases.

Dust particles in the atmosphere scatter the blue light from the sunlight and permit the red to pass. This explains why the sky appears blue and the direct rays of the setting sun are red.

Within the **isothermal region**, more popularly known as the **stratosphere**, the temperature is approximately constant.

The height at which the stratosphere begins depends upon the latitude; it is about six miles and the temperature about -50° F. at latitude 60° north; the corresponding figures for the equator are nine miles and -95° F.

The highest man has ascended into the stratosphere is 72,395 feet or 13.71 miles.

This record was set on November 11, 1935 by Major Albert W. Stevens and Captain Orvil A. Anderson in the flight of the Explorer II sponsored by the National Geographic Society and the United States Army Air Corps.

The **Aurora Borealis**, or **Northern Lights**, and the similar aurora in the southern hemisphere are atmospheric phenomena. This light has been found to be due to corpuscles ejected by the sun which ionize the upper atmosphere and cause it to emit light similar to that produced by electrical discharge in the laboratory.

The auroral arch begins at a height of about 50 miles and streamers often rise to 200 miles; they have been measured to heights of 500 or 600 miles.

Sounding balloons sent up in our atmosphere show that the penetrating **cosmic rays** increase in intensity with altitude. Measurements made below the surface of lakes show the intensity of these rays to decrease with depth. Such experiments prove that these rays are not generated within the earth. Evidence at present points to the conclusion that the rays permeate our whole galactic system and measurements have even been made which have verified other work on the rotation of the galaxy. The nature of these rays is unknown, though part of this radiation is of corpuscular nature, some of it behaves like light of very short wave-length.

HIGHLIGHTS OF THE SKY IN 1946

Although there will be six eclipses this year, four of the Sun and two of the Moon, only one will be visible in the United States, and this of no particular interest. The most favorable location for viewing this partial eclipse of the Sun on November 23 will be in the New England States, where about .35 of the Sun's face will be hid at noon. Elsewhere in the United States the eclipse will be smaller in size, tapering off to zero in the southwestern states.

Always of interest to celestial observers are the colorful showers of meteors that occur throughout the year. The more notable of these are the Quadrantids, Jan 2-3; Lyrids, April 20-22; Gamma Aquarids, May 6; Delta Aquarids, July 25-30; Perseids, Aug. 10-12; Orionids, Oct. 18-20; Leonids, Nov. 13-15; and Geminids, Dec. 10-12. In each group, the name indicates the constellation from which the meteors will appear to emanate. The best time for observation is after midnight.

This year several close groupings of planets and close approaches to the Moon will afford spectacles worth observing. During January Mars and Saturn will be shining all night quite close together, only 4° separating them on the 22nd, when in conjunction (same longitude). Again on March 18 they will be in conjunction, this time only 3°

apart. After that they separate, as Mars moves rapidly eastward and Saturn remains almost stationary. On April 9, an interesting sight will be the very close approach of Mars to the Moon, which at some points will be seen as an occultation (planet passes behind the Moon). Still more colorful will be the close conjunction of the brilliant evening star Venus with the Moon on June 1. This also will be seen as an occultation from some points. Eleven days later Saturn will be less than 2° from Venus, with Venus the brighter of the two.

In early fall the three brightest evening Stars, Venus, Mars and Jupiter, will be closely grouped. On August 9 Venus and Mars will be about half a degree apart low in the western sky after sunset, and on September 3 Venus and Jupiter will be in conjunction near the same point. Three weeks later Jupiter and Mars will be in conjunction (about 1° apart), with Venus a short distance to the southeast, affording an excellent opportunity to compare the brightness of these three planets. Venus, showing a thin crescent through a small telescope, will be the most brilliant, then comes giant Jupiter, half a billion miles away, and third, Mars, the closest of the planets and the one that many persons think to be inhabited.

FLAG OF WESTMINSTER ABBEY

Westminster Abbey has its own flag adopted 1931 as the official ensign of the dean. It incorporates the red and white roses of the

Tudors, the cross and five gold martlets of St. Edward the confessor and the royal arms.

WEATHER FORECASTS FOR 1946

January

1-3. Storm period. Blizzards on the western plains will damage stock and cause much suffering. Wind storms in the lower Mississippi valley.

4-7. Fair weather. Clearing skies and colder in the north Atlantic states. Heavy frosts in the southeast. Snow flurries in the northern Rockies.

8-11. Local storms. Generally fair and warmer in the Great Lakes sections, with scattered snowfalls. Rain storms along the California coast.

12-15. Danger period. Severe gales along the New England coast, while inland in the northern states furious snow storms may be expected. Rains along the Gulf of Mexico.

16-19. Cold wave. Fair weather in most areas as temperatures fall. Strong winds will bring the cold south to the citrus areas of California, Texas and Florida. Warmer on the 19th.

20-23. Unsettled spell. Blustery and unpleasant in the Missouri River valley, as a low pressure area develops in the northwest. Scattered rains in Oregon and Washington. Dry and cool on the southern plains.

24-27. Changeable period. Fair at first and colder in the Alleghany Mountain region and Ohio Valley. Wind storms will develop on Saturday, as dangerous storms spread over the northwestern states. Heavy fogs along the south Atlantic coast.

28-31. Storm period. A violent storm area will move eastward across the country, bringing heavy snows in the north and rains in the south. Highways will be blocked in many sections. Gales along the Pacific coast will delay shipping and damage property. Precipitation normal for the month, temperatures below the average.

February

1-3. Storm period. Severe gales will lash the Atlantic coast from Cape Hatteras to the Canadian border. On the northern plains blizzards will cause great snow drifts. Fair and sunny in California.

4-7. Unsettled period. Continued stormy in most sections. Strong winds in the Great Lakes area will make conditions most disagreeable. Colder on the 7th in the Missouri River valley.

8-11. Changeable spell. Fair at first, followed by clouding skies and rising temperatures. Severe storms in the upper Mississippi valley the first of the week, accompanied by strong winds and blinding snowfalls.

12-15. Cold wave. Clearing skies and much colder. Freezing winds will swoop deep into the south, where killing frosts will endanger citrus trees and truck crops.

16-19. Local storms. Unsettled and rainy in the lower Mississippi valley, with blustery squalls at many points. Snow flurries on the central plateau. Fogs along the Gulf coast.

20-23. Fair weather. Clear and cooler in New England states and St. Lawrence River valley. Delightful in the southwest, where days will be sunny and nights cool. Warmer the last of the week.

24-28. Storm period. Rain in the southeastern states and blustery. Gales along the coast of Oregon and Washington. Snow storms in the Ohio River valley and Great Lakes area.

Precipitation and temperatures will be average this month.

MARCH

1-3. Windy weather. Blustery squalls in

some sections, although conditions in general will be fair with lower temperatures. Occasional snow flurries in the Appalachian mountains.

4-7. Local storms. Scattered rains and snows on the western plains will bring needed precipitation to that area. Brisk showers in California.

8-11. Storm period. Severe storms in the upper Mississippi valley and along the Missouri River will cause heavy snowfall. Rain storms in the lower Atlantic states.

12-15. Cold wave. Fair and much colder in the Great Lakes area and Ohio River valley. Chilling winds in New England with occasional snow flurries.

16-19. Unsettled spell. Threatening conditions on Saturday and Sunday will be followed by sudden, swift storms in many sections. Rain storms in the Gulf States. Fogs along the Pacific coast.

20-23. Variable weather. Squally at some points, pleasant elsewhere. Local rains in the Ozarks and snow flurries in the northern Rockies.

24-27. Stormy period. Heavy rains in the lower Mississippi valley up to mid-week, when skies will clear. Scattered snow storms on the northern plains.

28-31. Changeable spell. Fair at first, becoming unsettled and blustery on the 30th in the northern states. Pleasant in the southeast, with scattered showers.

Precipitation for the month above normal, temperatures average.

April

1-3. Fair weather. Pleasant in most sections on the 1st and 2nd, with threatening conditions developing in the Missouri River valley on the 3rd. Showers in Oregon and Washington.

4-7. Danger period. A severe storm area will spread east and south over the country, bringing heavy rains and strong winds. Floods may be expected in the Mississippi and Ohio River Valleys.

8-11. Fair spell. Clearing skies on the 8th in the western states, and further east a day or two later. Fine planting weather in the south.

12-15. Local storms. Scattered rains in the Great Lakes area and eastward to New England. Much warmer in the southwest.

16-19. Changeable period. Fair at first, becoming overcast and unsettled on the western plains on the 18th. Blustery squalls in California, with scattered showers.

20-23. Stormy weather. Rain storms in the eastern states will delay spring plowing. Along the Gulf of Mexico, violent squalls will hit many sections.

24-27. Pleasant spell. Clear and cool up to the 26th, when local storms will appear in the northwestern states. Warmer in the lower Mississippi valley, with scattered thunder storms.

28-30. Disagreeable period. Overcast and chilly in the northeastern states, with frequent showers. Wind storms on the upper Pacific coast will delay shipping. Rains in the southeast.

Precipitation average for the month, temperatures below normal.

May

1-3. Danger period. A storm of unusual severity will spread eastward over the Missouri River valley, with strong winds, reaching the upper Mississippi valley by the 3rd.

Threatening conditions in the Ohio River valley.

4-7. Changeable spell. The storm area will move rapidly east and southeast to the Atlantic coast, with heavy rains. Clearing in the west by the 5th, and in most other areas by the 7th.

8-11. Local storms. Pleasant quite generally. Local storms in the Great Lakes region and St. Lawrence River valley. Thunder storms on the southern plains will bring needed rainfall.

12-15. Fair period. Clear and cool in the northeastern states. Fine weather for the farmers to plow and plant. Dry and warmer in California. Fogs along the New England coast.

16-19. Storm period. Brisk rains on the northern plains will be most welcome. Blustery squalls in the Gulf states. Wind storms in the northern Rockies.

20-23. Unsettled spell. Heavy rains at many points may be expected at this time. Gales along the Pacific coast.

24-27. Variable period. Disagreeable at first, becoming clear and delightful on Sunday. Rising temperatures in most sections. Hot in the southeast.

28-31. Windy weather. Violent storms and strong winds will make this a most unpleasant period. Hail in many places.

Temperatures for the month will be average, precipitation above normal.

June

1-3. Fair weather. Clear skies and much warmer in the Mississippi valley. Hot and sultry in the Ohio River valley, with occasional thunder storms.

4-7. Unsettled spell. Local storms along the Missouri River will bring little rainfall. Very dry in California and much warmer.

8-11. Changeable period. Fair up to the 10th, when violent thunder storms in the southeastern states will begin the rainy season. Scattered showers in New England and cooler.

12-15. Storm period. Sudden, swift storms of unusual violence may be expected in many sections. Strong winds in the northern Rockies will do much damage.

16-19. Disagreeable period. Cool in the Great Lakes area, with frequent showers. Very hot in the Gulf states, where daily thunder storms will occur.

20-23. Fair period. Clear and delightful on the western plains. Sultry in the lower Mississippi valley, with frequent thunder storms. Pleasant in Oregon and Washington.

24-27. Stormy weather. Fierce gales along the Atlantic coast will do much damage to small boats and coastal property. Sand storms in the southwestern states. Strong winds quite generally.

28-30. Fair spell. Clearing on the 28th, followed by fine weather. Much warmer in the Ohio River valley, where scattered thunder storms will bring rain and hail.

Precipitation below normal for the month, temperatures above the average.

July

1-3. Unsettled period. Local storms in the Missouri River valley will bring considerable rainfall to that area. Scattered windstorms in many sections.

4-7. Fair weather. Clear and warmer in the upper Mississippi valley. Fine growing conditions for summer crops. Hot and dry in the southwestern states.

8-11. Stormy spell. Widespread thunder storms in the southeastern states and west-

ward along the Gulf. Violent squalls and cloudbursts in the Allegheny mountains.

12-15. Clear spell. Fair and hot in most sections. Occasional thunder storms on the northern plains, but very dry further south. Delightful in New England with cool northeasterly winds.

16-19. Local storms. Sudden squalls on the Great Lakes may be expected at this time, endangering small boats. Showers in the southern Rockies.

20-23. Storm period. Violent thunder storms in some northeastern states will be accompanied by damaging hail. Heavy rains in the Gulf states. This will be a tornado period.

24-27. Windy spell. Blustery squalls on the 24th and 25th, to be followed by fair and cooler weather. However, strong winds will continue to blow in many sections.

28-31. Unsettled period. Dangerous gales may be expected along the California coast but little rain will fall. Frequent rains in the lower Mississippi valley.

Precipitation and temperatures for the month will be average.

August

1-3. Heat wave. Very high temperatures quite generally will cause much suffering in the big cities. Fine vacation weather. Very dry on the southern plains.

4-7. Storm period. Violent thunder storms will bring relief from the heat in the Ohio River valley. Blustery squalls along the Atlantic seaboard.

8-11. Fair weather. Clear skies and cooler in the Great Lakes area, where strong northerly winds will blow. Very pleasant in Oregon and Washington.

12-15. Local storms. Thunder storms will bring heavy rains to the southeastern states. Dense fogs along the California coast. Showers in the Allegheny Mountains.

16-19. Danger period. Conditions on the 16th and 17th will presage severe storms that will develop the first of the following week and spread eastward to the upper Mississippi valley. A hurricane will threaten the southeastern states.

20-23. Varied spell. The storm area will move slowly into the eastern states, with frequent rains and strong winds, while in the west conditions will moderate and skies clear.

24-27. Unsettled period. Hot, sultry weather on the southern plains will be broken by violent thunder storms. Scattered showers in New England.

28-31. Clear skies. Fair weather in most sections at this time, with occasional thunder storms, but little rain. Hot and dry in the southwest.

Temperatures for the month above the average, precipitation below.

September

1-3. Storm period. Unsettled and rainy in the north Atlantic states, with lower temperatures. Hot and dry in the southeast. Dense fog along the coast of Oregon and Washington.

4-7. Fair spell. Delightful fall weather in the upper Mississippi valley. Early frosts on the northern plateau.

8-11. Danger period. Severe storms and heavy rains in many sections. A tropical hurricane will threaten the Gulf states and Florida. Violent gales on the Great Lakes.

12-15. Unsettled spell. Milder weather in the west, but still wet and blustery. In the eastern areas, severe storms will cause much

damage.

16-19, Changeable period. Unsettled at first, with skies clearing on the 18th in the Ohio River valley and northeastward to New England.

20-23, Blustery weather. Very windy in the lower Mississippi valley with scattered rains. On the California coast, sudden squalls will endanger small craft and wreck waterfront property.

24-27, Fair period. Clear skies and cooler. Fine harvest weather for the farmers. Chilly nights on the northern plains, with heavy frosts in low places.

28-30, Stormy weather. Rain storms and unpleasant in the Missouri River valley. Snow flurries in the northern Rockies. Fogs along the north Pacific coast.

Precipitation for the month above the average, temperatures below normal.

October

1-3, Fair weather. Lower temperatures in the upper Mississippi valley, with clear skies. Heavy frosts in New England. Light snows on the northern plateau.

4-7, Local storms. Unsettled in the Great Lakes area, where chilly north winds will bring cold rains and high waves. Rains in the Ozarks.

8-11, Clear spell. Fair weather, as a Harvest Moon lights the night sky. Lower temperatures will reach far into the south, bringing cool weather. Unsettled on the 10th and 11th in the northwestern states.

12-15, Storm period. Severe gales will strike the California coast, causing much damage to shipping and coastal property. Rains in the southeastern states. Clearing on the 15th.

16-19, Variable spell. Fair up to Friday, when local storms will bring scattered rains to the Missouri River valley. Blustery squalls along the Atlantic coast from Cape Hatteras to the Canadian border.

20-23, Windy weather. Generally fair, but cold northerly winds of unusual violence will make conditions unpleasant. Sand storms in the southwest may be expected.

24-27, Unsettled period. Sudden, swift storms will strike many sections. Early blizzards on the northern plains.

28-31, Cold wave. Fair weather and much lower temperatures. Killing frosts in the Ohio River valley. Snow flurries in the Allegheny Mountains.

Precipitation and temperatures for the month will be normal.

November

1-3, Local storms. Warmer in the upper Mississippi valley, with scattered rains. Snow flurries in the northern Rockies. Heavy fogs along the Atlantic coast.

4-7, Changeable period. Fair at first, becoming unsettled and blustery in the northern states on the 6th. Severe storms in the

lower Mississippi valley on the 7th. Gales along the coast of Oregon and Washington.

8-11, Stormy weather. Heavy rains in the Ohio River valley. Sleet and rain in New England, turning to snow on the 10th, as temperatures fall.

12-15, Cold wave. Clear skies and much colder. Heavy frosts in the southeastern states. Warmer and unsettled on the 15th.

16-19, Fair period. Clear skies in most sections, but at some points snow flurries or rain squalls will occur. Overcast on the 19th.

20-23, Unsettled spell. Chilling winds will blow down from the north in the Great Lakes area, endangering late shipping and causing much discomfort. Severe gales may be expected on the Atlantic coast.

24-27, Fair weather. Clear and colder. Light snows on the northern plains. Showers in California on the 27th.

28-30, Local storms. Sleet and snow storms in the northwestern states and along the Missouri River valley. Unsettled on the southern plains, but little rain.

Precipitation normal for the month, temperatures above the average.

December

1-3, Variable spell. Fair at first, becoming overcast and threatening on the 3rd in the upper Mississippi valley. Warmer in most areas.

4-7, Danger period. Severe storms will bring heavy snows to the Ohio River valley by mid-week, and eastward to the Atlantic by Saturday. Violent storms along the Pacific coast.

8-11, Local storms. Fair and colder at most points, but in some sections sudden swift storms will do much damage. Delightful weather in the Gulf states and Florida.

12-15, Cold wave. Skies will clear on the 13th, as temperatures fall rapidly. Cold northerly winds will sweep the western plains and reach deep into Texas. Frosts in the Gulf states.

16-19, Storm period. Threatening on the 16th in the Missouri River valley, followed by violent blizzards, as a storm area moves southeasterly across the country.

20-23, Changeable spell. Stormy in the Mississippi valley on the 20th, the Great Lakes area on the 21st, and in the eastern states a day or two later. Clearing in the west on the 23rd.

24-27, Fair weather. Pleasant quite generally, with snow flurries bringing a white Christmas to many points in the north. Clear and sunny in the south.

28-31, Storm period. Fair up to the 30th, when heavy snow storms may be expected in the Great Lakes area. Blizzards in the St. Lawrence River valley. Rains in California.

Precipitation for the month above the average, temperatures below normal.

RUDOLPH HERING MEDAL

Awards of the Rudolph Hering medal, sponsored by the Sanitary Engineering division of the American Society of Civil Engineers, have been:

1927—Harris P. Eddy
1931—Samuel A. Greeley and W. D. Hatfield
1935—John H. Gregory, Orrie Bonney and Robert A. Allton

1936—No award
1937—W. W. Horner and F. L. Flynt
1939—A. J. Schafmayer and B. E. Grant
1940—J. W. Ellms

1941—Thomas H. Wiggin
1942—Robert T. Regester
1943—George J. Schroeffer
1944—No award
1945—Langdon Pearse

WEIGHT OF RAISINS

According to Crops and Markets, monthly publication on the United States Department of Agriculture, one ton of dried raisins is equivalent to four tons of fresh grapes.

WEIGHTS AND MEASURES

Standard Scales Used in the United States

DEFINITIONS OF UNITS

1. LENGTH

Basic Units

A meter (m) is a unit of length equal to the distance between the defining lines on the International Prototype Meter when this standard is at the temperature of melting ice (0° C).

A yard (yd.) is a unit of length equal to $\frac{3600}{3937}$ of a meter.

Multiples and Submultiples

- 1 kilometer (km) = 1,000 meters.
- 1 hectometer (hm) = 100 meters.
- 1 dekameter (dkm) = 100 meters.
- 1 decimeter (dm) = 0.1 meter.
- 1 centimeter (cm) = 0.01 meter.
- 1 millimeter (mm) = 0.001 meter.
- 1 micron (μ) = 0.000001 meter = 0.001 millimeter.
- 1 millimicron (m μ) = 0.00000001 meter = 0.001 micron.
- 1 angstrom (A) = $\begin{cases} = 0.0000001 \text{ millimeter.} \\ = 0.0001 \text{ micron.} \\ = 0.1 \text{ millimicron.} \end{cases}$
- 1 statute mile = $\begin{cases} = 8 \text{ furlongs} = 320 \text{ rods.} \\ = 1,760 \text{ yards} = 5,280 \text{ feet.} \end{cases}$
- 1 furlong = $\frac{1}{8}$ mile = 40 rods = 220 yards = 660 feet.
- 1 rod = $5\frac{1}{2}$ yards = $16\frac{1}{2}$ feet = 25 links.
- 1 foot = $\frac{1}{3}$ yard = 12 inches.
- 1 hand = 4 inches.
- 1 inch = $\frac{1}{36}$ yard = $\frac{1}{12}$ foot.
- 1 line (button) = $\frac{1}{40}$ inch.
- 1 point (printers) = $\frac{1}{72}$ inch.
- 1 mil = $\frac{1}{1000}$ inch.
- 1 chain (Gunter's) = 4 rods = 22 yards = 66 feet = 100 links.
- 1 link (Gunter's) = $\frac{1}{100}$ chain = 7.92 inches.
- 1 U. S. nautical mile = 1,853.248 meters
- 1 sea mile = 6,080.20 feet.
- 1 geographical mile = 1,852 meters = 6,076.10 feet.
- 1 international nautical mile = 1,852 meters = 6,076.10 feet.
- 1 fathom = 6 feet = 8 spans.
- 1 span = $\frac{1}{8}$ fathom = 9 inches.

2. AREA

Basic Units

A square meter (m^2) is a unit of area equal to the area of a square the sides of which are 1 meter.

A square yard (sq yd) is a unit of area equal to the area of a square the sides of which are 1 yard.

Multiples and Submultiples

- 1 square kilometer (km^2) = 1,000,000 square meters.
- 1 hectare (ha), or square hectometer (hm^2) = 10,000 square meters.
- 1 are (a), or square dekameter (dkm^2) = 100 square meters.
- 1 centare (ca) = 1 square meter.
- 1 square decimeter (dm^2) = 0.01 square meter.
- 1 square centimeter (cm^2) = 0.0001 square meter.
- 1 square millimeter (mm^2) = 0.000001 square meter.
- 1 square mile (sq mi) = 640 acres = 102,400 square rods. = 3,097,600 square yards = 27,878,400 square feet.
- 1 acre (acre) = 10 square chains = 160 square rods = 4,840 square yards. = 43,560 square feet.

- 1 square chain (sq ch) = 16 square rods = 484 square yards = 4,356 square feet. = 10,000 square links
- 1 square link (sq li) = 0.0001 square chain = 0.0484 square yard. = 0.4356 square foot = 62.7264 square inches.
- 1 square rod (sq rd) = 30.25 square yards = 272.25 square feet = 625 square links.
- 1 square foot (sq ft) = $\frac{1}{9}$ square yard = 144 square inches.
- 1 square inch (sq in) = $\frac{1}{1296}$ square yard = $\frac{1}{144}$ square foot.

3. VOLUME

Basic Units

A cubic meter (m^3) is a unit of volume equal to a cube the edges of which are 1 meter.

A cubic yard (cu yd) is a unit of volume equal to a cube the edges of which are 1 yard.

Multiples and Submultiples

- 1 cubic kilometer (km^3) = 1,000,000,000 cubic meters.
- 1 cubic hectometer (hm^3) = 1,000,000 cubic meters.
- 1 cubic dekameter (dkm^3) = 1,000 cubic meters.
- 1 stere (s) = 1 cubic meter.
- 1 cubic decimeter (dm^3) = 0.001 cubic meter.
- 1 cubic centimeter (cm^3) = 0.000001 cubic meter = 0.001 cubic decimeter.
- 1 cubic millimeter (mm^3) = 0.000000001 cubic meter = 0.001 cubic centimeter.
- 1 cubic foot (cu ft) = $\frac{1}{27}$ cubic yard.
- 1 cubic inch (cu in) = $\frac{1}{46656}$ cubic yard = $\frac{1}{1728}$ cubic foot.
- 1 board foot (fbm) = 144 cubic inches = $\frac{1}{12}$ cubic foot.
- 1 cord (cd) = 128 cubic feet.

4. CAPACITY

Basic Units

A liter (liter) is a unit of capacity equal to the volume occupied by the mass of 1 kilogram of pure water at its maximum density (at a temperature of 4° C, practically) and under the standard atmospheric pressure (of 760 mm). It is equivalent in volume to 1.000027 cubic decimeters.

A gallon (gal) is a unit of capacity equal to the volume of 231 cubic inches. It is used for the measurement of liquid commodities only.

A bushel (bu) is a unit of capacity equal to the volume of 2,150.42 cubic inches. It is used in the measurement of dry commodities only.

This is the so-called stricken or struck bushel. A heaped bushel for apples of 2,747.715 cubic inches was established by the U. S. Court of Customs Appeals Feb. 15, 1912, in United States v. Weber (No. 757). A heaped bushel, equivalent to $1\frac{1}{4}$ stricken bushels, is also recognized.

Multiples and Submultiples

- 1 hectoliter (hl) = 100 liters.
- 1 dekaliter (dkl) = 10 liters.
- 1 deciliter (dl) = 0.1 liter.
- 1 centiliter (cl) = 0.01 liter.
- 1 milliliter (ml) = 0.001 liter = 1.000027 cubic centimeters.

- 1 liquid quart (liq qt) = $\frac{1}{4}$ gallon = 57.75 cubic inches.
 1 liquid pint (liq pt) = $\frac{1}{8}$ gallon = $\frac{1}{2}$ liquid quart = 28.875 cubic inches.
 1 gill (gi) = $\frac{1}{16}$ gallon = $\frac{1}{4}$ liquid pint = 7.21875 cubic inches.
 1 fluid ounce (fl oz) = $\frac{1}{128}$ gallon = $\frac{1}{16}$ liquid pint.
 1 fluid dram (fl dr) = $\frac{1}{32}$ fluid ounce = $\frac{1}{128}$ liquid pint.
 1 minim (min or m) = $\frac{1}{60}$ fluid dram = $\frac{1}{480}$ fluid ounce.
 1 peck (pk) = $\frac{1}{4}$ bushel = 537.605 cubic inches.
 1 dry quart (dry qt) = $\frac{1}{32}$ bushel = $\frac{1}{8}$ peck = 67.200625 cubic inches.
 1 dry pint (dry pt) = $\frac{1}{64}$ bushel = $\frac{1}{2}$ dry quart = 33.6003125 cubic inches.
 1 barrel, for fruits, vegetables, and other dry commodities, other than cranberries² = 7.056 cubic inches = 105 dry quarts.
 1 barrel for cranberries = 5,826 cubic inches.³

²As fixed by United States standard barrel act (United States Code, title 15, ch. 6, sec. 234).

³As computed from dimensions fixed by United States standard barrel act, see above.

5. MASS

Basic Units

A kilogram (kg) is a unit of mass equal to the mass of the International Prototype Kilogram.

A gram (g) is a unit of mass equal to one-thousandth of the mass of the International Prototype Kilogram.

An avoirdupois pound (lb. avdp) is a unit of mass equal to 0.4535924277 kilogram.

A troy pound (lb t) is a unit of mass equal to $\frac{5760}{7000}$ of that of the avoirdupois pound.

Multiples and Submultiples

- 1 metric ton (t) = 1,000 kilograms.
 1 hectogram (hg) = 100 grams.
 1 dekagram (dkg) = 10 grams.
 1 decigram (dg) = 0.1 gram.
 1 centigram (cg) = 0.01 gram.
 1 milligram (mg) = 0.001 gram.
 1 metric carat⁴ (c) = 200 milligrams = 0.2 grams.
 1 avoirdupois ounce (oz avdp) = $\frac{1}{16}$ avoirdupois pound = 437.5 grains.
 1 avoirdupois dram (dr avdp) = $\frac{1}{256}$ avoirdupois pound = $\frac{1}{16}$ avoirdupois ounce.
 1 grain (grain) = $\frac{1}{7000}$ avoirdupois pound = $\frac{1}{5760}$ troy pound.
 1 apothecaries' pound (lb. ap) = 1 troy pound = $\frac{5760}{7000}$ avoirdupois pound.
 1 apothecaries' or troy ounce (oz ap or ʒ) = $\frac{1}{12}$ troy pound = $\frac{480}{7000}$ avoirdupois pound = 480 grains.
 1 apothecaries' dram (dr ap or ʒ) = $\frac{1}{96}$ apothecaries' pound = $\frac{1}{8}$ apothecaries' ounce = 60 grains.
 1 pennyweight, (dwt) = $\frac{1}{20}$ troy ounce = 24 grains.
 1 apothecaries' scruple (s ap or ʒ) = $\frac{1}{48}$ apothecaries' dram = 20 grains.
 1 short hundredweight (sh cwt) = 100 avoirdupois pounds.
 1 long hundredweight (1 cwt) = 112 avoirdupois pounds.
 1 short ton (sh tn) = 2,000 avoirdupois pounds.
 1 long ton (1 tn) = 2,240 avoirdupois pounds.

⁴See Bureau of Standards Circular C43, The Metric Carat, for a discussion of the metric carat and tables of the relations of the metric carat to the old carat of 205.3 milligrams in use in this country previous to July 1, 1913.

TIME MEASURE

- 60 seconds = 1 minute
 60 minutes = 1 hour
 24 hours = 1 day

- 365 (or 366) days = 1 year
 100 years = 1 century

Foreign Weights and Measures

WEIGHTS AND MEASURES OF DIFFERENT COUNTRIES

1. Metric system (compulsory in France, Germany, Austria, the Netherlands, Belgium, Luxembourg, Switzerland, Italy, Greece, Turkey, Rumania, Spain, Portugal and most of the South American republics; optional in Great Britain, the United States and Russia):

1 meter (m.) = 443.296 Paris lignes = 3.280899 English feet = 3.18620 Prussian feet = 1.00000301 mètres des archives.

1 kilometer (km.) = 10 hectometers (hm.) = 0.6214 English mile = 0.1328 Prussian mile = 0.9375 Russian verst = 0.5390 nautical mile.

1 lieu (France) = 1 myriameter = 10 kilometers.

1 German mile = 7 1/2 km. = 0.996 Prussian mile = 4.66 English miles.

1 hectare (ha.) = 100 acres (a.) = 10,000 sq. m. = 0.01 sq. km. = 2.471 English acres.

1 liter (l.) = 0.001 cu. m. = 1,000 cc. = 0.2201 gallon.

1 hectoliter (hl.) = 0.1 cu. m. = 100.1 = 22.01 gallons.

1 kilogram (kg.) = 1000 g. = weight of 1 liter of water at + 4° C. = 2 German and Swiss pounds (Zollfund) = 0.999999842 kilogram prototype = 2.2046 pounds avoirdupois = 1.7857 Austrian pounds = 2.3511 Swedish pounds = 2.4419 Russian pounds.

1 gram (g.) = 15.432 grains (English).

1 quintal = 100 kg. = 196.84 lb. avoirdupois = 1 cwt. 3 qrs. 0.84 lb.

1 metric ton = 1000 kg. = 0.9842 English ton = 1.1023 American short tons (at 2000 pounds).

2. Great Britain and Ireland:

1 foot = 0.3047943 m.

1 inch = 25.3995 mm.

1 yard = 3 feet = 0.9143835 m.

1 fathom = 2 yards = 1.829 m.

1 rod (pole, perch) = 5 1/2 yards = 5.029-109 m.

1 chain = 22 yards. 80 chains = 1 mile.

- 1 statute mile = 8 furlongs = 320 poles
= 1760 yards = 5280 feet = 1.6093 kilo-
meters (km.).
1 nautical mile = 6080.20 feet = 1854.96
m.
1 acre = 4 roods = 160 poles = 0.40467
ha. = 43,560 square feet = 4047 square
meters.
1 square mile = 640 acres = 258.989
ha.
1 gallon = 4 quarts = 8 pints = 277.274
cubic inches = 4.536 liters.
1 gallon = 10 lb. water = 70,000 grains
= 4.535924 kg. water.
1 cubic foot = 1728 cubic inches = 28.-
31531.
1 cubic inch = 16.3862 cc.
1 quarter = 8 bushels = 32 pecks = 64
gallons = 2.903 hl.
1 bushel = 8 gallons = 0.3628 hl.
1 fluid ounce = $\frac{1}{160}$ pint = 28.413 cc.
1 pound avoirdupois (lb.) = 16 ounces
(oz.) = 7000 grains = 0.4535924 kg.
1 ounce avoirdupois = 427½ grains =
28.35 g.
1 hundredweight (cwt.) = 4 quarters
(qr) = 8 stones = 112 lb. = 50.8024 kg.
1 ton = 20 cwt. = 2240 lb. = 1016.648
kg.
Apothecaries' weight:
1 pound troy = 12 ounces troy = 96
drams = 288 scruples = 5760 grains = 373-
24195 g.
1 ounce troy = 8 drams = 24 scruples =
480 grains = 31.1035 g.
1 ounce troy (for gold and precious
stones) = 20 pennyweight (dwt.) = 480
grains = 31.1035 g.
1 pennyweight (dwt.) = 1.552 g.
1 grain (common to avoirdupois and
troy weight) = 0.06479895 g.
3. Denmark and Norway employ as unit of
measure, the Prussian foot; as unit of
weight the units of the metric system,
viz., kilos, etc.
4. Russia:
1 foot = 1 English foot.
1 sashehn = 7 feet = 3 arshin = 12 tchet-
vert = 48 vershok = 2.13357 m.
1 verst = 500 sashehn = 1066.78 m.
1 dessatine = 2400 square sashehns =
10,925 sq. m.
1 vedro = 10 krushky (stoof) = 12.2991.
1 tchetvert = 1 osmini = 4 payok = 8
tcheverik = 209.91.
1 pound = 32 loth = 96 solotnik = 9216
doli = 0.9028 English pound = 409.531 g.
1 berkovets = 10 pud = 400 puds =
163.81 kg.
1 pud = 40 pounds = 36.112 English
pound = 16.3805 kg.
5. Sweden:
1 foot = 10 zoll (inches) = 100 lines =
0.97408 English foot = 0.296901 m.
1 famn (fathom) = 3 alnars (ells) = 6
feet = 5.58445 English feet = 1.7814 m.
1 mile = 6000 fathoms = 6.6417 English
statute miles = 10.6884 km.
1 kanne = 100 cubic inches = 0.57694
English gallon = 2.617 l.
1 skålpund = korn (at 100 art) = 0.9378
English pound = 425.3395 g.
1 centner = 100 skålpund.
1 skipsbund = 20 liesbund = 400 skål-
pund.
6. Switzerland:
Metric measure and weight and the fol-
lowing are sometimes still employed:
1 fuss = 0.3000 m. = 0.9843 English foot
1 juchart = 36 are = 0.88956 English
acre.
1 maass = 1.51 l.
1 saum = 100 maass = 151 l.
7. South American (Bolivia, Chile, Colomb-
ia, Ecuador, Guatemala, Honduras,
Nicaragua, Peru, San Salvador, Vene-
zuela):
1 quintal = 46.0093 kg.
- | Country | Quintal | kg. |
|-----------|---------|---------|
| Argentina | 1 | 45.9367 |
| Brazil | 1 | 58.752 |
| Paraguay | 1 | 46.008 |
| Uruguay | 1 | 45.94 |
- Square Feet, Square Meter:
1 square meter (sq. m.) = 10.764 square
feet (English and Russian) = 10.008
square feet (Austrian) = 10.152 square
feet (Prussian and Danish) = 11.344 square
feet (Swedish).
1 square foot (English and Russian) =
0.09290 square meter.
Cubic Feet, Cubic Meter:
1 cubic meter (cu. m.) = 35.316 cubic
feet (English and Russian).
1 cubic meter (cu. m.) = 31.66 cubic
feet (Austrian).
1 cubic meter (cu. m.) = 32.346 cubic
feet (Prussian and Danish).
1 cubic meter (cu. m.) = 38.209 cubic feet
(Swedish).
1 cubic foot (English and Russian) =
0.028315 cubic meter.
1 kilogram per running meter = 0.6719
English pound per running foot = 0.6277
zollpfund per Prussian foot.
1 English pound per 1 English foot =
1.4882 kg. per running meter.
1 kilogram per square centimeter (for
steam pressure) = 14.223 English pounds per
square inch = 13.681 zollpfund per Prussian
square inch = 13.878 zollpfund per Austrian
square inch.

BIBLE WEIGHTS AND MEASURES

A day's journey equals 33½ U. S. miles.
A Sabbath day's journey, 1 U. S. mile.
Ezekiel's reed, 11 feet (approximately).
Cubit, Hebrew, 22 in. (approximately).
Cubit, Greek, 18 in. (approximately).
A finger's breadth, 1 in. (approximately).
A shekel of silver, 62½ cents.
A shekel of gold, \$8.09.
A talent of silver, \$1,518.32.
A talent of gold, \$23,309.
A piece of silver, 13 cents.
A farthing, 3 cents.

A gerah, 2½ cents.
A mite, 1½ mills.
A homer (dry measure), 11½ bushels.
A homer (liquid measure), 76 gallons and
5 pints.
An ephah or bath, 7 gallons and 4 pints.
A hin, a gallon and two pints.
A firkin, 7 pints.
An omer, 6 pints.
A cab, 3 pints.
A log, ¼ pint.

MISCELLANEOUS

3 inches = 1 palm
4 inches = 1 hand
2½ feet = 1 military pace

HORSEPOWER (PER SECOND)

Kg.-m.	Austria foot-pounds	Prussia foot-pounds	England foot-pounds	Sweden foot-pounds	Russia foot-pounds
75	474.53	477.93	542.47	593.90	600.85
76.041	481.11	484.56	550	602.14	609.19

75 kilogram-meters taken as unit, 550 English foot-pounds taken as unit = 1 Admiralty horsepower per second; or 33,000 foot-pounds per minute.

THE INTERNATIONAL METRIC SYSTEM

The present basis of the metric system of weights and measures may be summarized as follows: (1) a material standard of length, the international prototype meter, preserved in a special underground vault of the International Bureau; (2) a material standard of mass, the international prototype kilogram, kept in the same place; (3) a standard of volume, the cubic decimeter, derived from the unit of length; and (4) a standard of mass, the liter, derived from the unit of mass.

Before 1875 the meter was defined as one

ten-millionth part of the earth's quadrant, the liter as a cube one-tenth meter on a side, and the kilogram as the mass of a cubic decimeter, or liter, of pure water when at the temperature of its maximum density, 4 degrees C. The change to the present system was made because of difficulty in determining the accuracy of volumes; the International Bureau of Weights and Measures under the direction of an International committee was established by a treaty signed by 17 leading nations.

FORMATION OF MULTIPLES AND SUBMULTIPLES

The metric tables are formed by combining the words "meter," "gram," and "liter" with the six numerical prefixes, as in the following tables:

Prefixes	Meaning		Units
milli-	= one thousandth	$\frac{1}{1000}$	0.001
centi-	= one hundredth	$\frac{1}{100}$	.01
deci-	= one tenth	$\frac{1}{10}$	.1
Unit	= one	1	1
deka-	= ten	10	10
hecto-	= one hundred	100	100
kilo-	= one thousand	1,000	1,000

STATIONERS' TABLE

25 sheets = 1 quire = 20 quires = 1 ream

COMMON EQUIVALENTS

Weights	Liquid
Milligram (.001 gram) = .0154 grain.	Milliliter (.001 liter) = .0388 fluid ounce.
Centigram (.01 gram) = .1543 grain.	Centiliter (.01 liter) = .338 fluid ounce.
Decigram (.1 gram) = 1.5432 grains.	Deciliter (.1 liter) = .845 gill.
Gram = 15.432 grains.	Liter = 1.0567 quarts.
Decagram (10 grams) = .3527 ounce.	Decaliter (10 liters) = 2.6418 gallons.
Hectogram (100 grams) = 3.5274 ounces.	Hectoliter (100 liters) = 26.418 gallons.
Kilogram (1,000 grams) = 2.2046 pounds.	Kiloliter (1,000 liters) = 264.18 gallons.
Myriagram (10,000 grams) = 22.046 pounds.	Length
Quintal (100,000 grams) = 220.46 pounds.	Millimeter (.001 meter) = .0394 inch.
Millier or tonneau—ton (1,000,000 grams) = 2,204.6 pounds.	Centimeter (.01 meter) = .3937 inch.
	Decimeter (.1 meter) = 3.937 inches.
	Meter = 39.37 inches.
	Decameter (10 meters) = 39.37 feet.
	Hectometer (100 meters) = 328 feet.
	Kilometer (1,000 meters) = .62137 mile.
	Myriameter (10,000 meters) = 6.2137 miles.
	Surface
Milliliter (.001 liter) = .061 cubic inch.	Centare (1 square meter) = 1,550 sq. in.
Centiliter (.01 liter) = .6102 cubic inch.	Are (100 square meters) = 119.6 sq. yds.
Deciliter (.1 liter) = 6.1022 cubic inches.	Hectare (10,000 sq. meters) = 2.471 acres.
Liter = .908 quart.	
Decaliter (10 liters) = 9.08 quarts.	
Hectoliter (100 liters) = 2.838 bushels.	
Kiloliter (1,000 liters) = 1.308 cubic yards.	

DISTANCE EQUIVALENTS

Since Nov. 22, 1932, all distances for track Athletic union have been measured by the events under the jurisdiction of the Amateur metric table.

Basis 1 meter = 39.37 inches = 3.2808 feet = 1.0936 yds.
1 kilometer = 1,000 meters = 0.621370 mile

BOARD FEET MEASUREMENTS

To find the number of board feet in a piece of lumber one inch or less in thickness multiply the length in feet by the width in feet.

For lumber more than an inch in thickness, multiply the length in feet by the width in feet by the thickness in inches.

COMPARISON OF METRIC & CUSTOMARY UNITS FROM 1 TO 9**1. LENGTH**

MEASUREMENT OF CIRCLES AND SPHERES

To find:

Diameter of a circle..... Multiply circumference by .31831

Circumference of a circle..... Multiply diameter by 3.1416

Area of a circle..... Multiply square of diameter by .7854

Surface of a ball..... Multiply square of diameter by 3.1416

Cubic inches of a ball..... Multiply cube of diameter by .5236

OFFICIAL ABBREVIATIONS OF INTERNATIONAL METRIC UNITS

These abbreviations are used by the Bureau of Standards conformably to the principle followed in the abbreviations adopted by the International Committee on Weights and Measures, Oct. 2, 1879. Metric abbreviations

are simply the initial letters of the respective units combined with the initial letters of the prefixes set solid in lower case, and without period.

PREFIXES

k kilo-
h hecto-

Note: A similar plan is used for abbreviations of cgs units and others: mf millifarad (m milli, f farad); μ f microfarad; m μ a thou-

sandth of a micron, and $\mu\mu$ one millionth of a micron.

* "dk" suggested and used by bureau to distinguish from "d."

† "t" = 1,000 kg = metric ton.

MEASUREMENT OF VOLUME AND WEIGHT

One cubic foot of anthracite coal weighs about 53 pounds; bituminous, 47 to 50 pounds.

A gallon of water (U. S. Standard) weighs 8.33 pounds and contains 231 cubic inches.

A pint of distilled water is equivalent to 1.04 pounds avoirdupois.

A cubic foot of water contains 7.5 gallons, 1.728 cubic inches; weight, 62.5 pounds.

A standard liquor gallon in the United States, effective July 1, 1934, was set at 231 cubic inches at 68 degrees Fahrenheit. This applies to whisky, rum, gin, brandy and other distilled spirits.

Mathematical Tables

MULTIPLICATION AND DIVISION

To multiply any number in Column 1 vertical by any number on Column 1 horizontal, find the number where the two columns meet; for instance, the sum of 5×5 is 25. To divide any number in the main portion of

the chart by any number in Column 1 vertical, find the number on a parallel line and the answer will be the number in the same line in Column 1 horizontal. For instance, 30 divided by 6 is 5.

Trade and Commerce

APPROXIMATE WEIGHTS OF MERCHANDISING UNITS OF VEGETABLES

Source: U. S. D. A. Bureau of Agricultural Economics

Crop	Unit	Approximate Net Weight	Crop	Unit	Approximate Net Weight
Artichokes—box		40 lb.	Cucumbers—bushel		48 lb.
Asparagus—crate		24 lb.	Eggplant—bushel		33 lb.
Beans, lima—bushel		32 lb.	Lettuce—western crate		75 lb.
Beans, snap—bushel		30 lb.	Onions—sacks		100 lb.
Beets—bushel		52 lb.	Peas—bushel		30 lb.
Cabbage—bushel		52 lb.	Peppers—bushel		25 lb.
Cantaloupe—crate		60 lb.	Potatoes, early Irish—bushel		60 lb.
Carrots—bushel		50 lb.	Spinach—bushel		18 lb.
Cauliflower—crate (1½ bu.)		39 lb.	Strawberries—crate (24 qt.)		36 lb.
Celery—2/3 crate		90 lb.	Tomatoes—bushel		53 lb.
Corn, sweet—ear		780 lb. per 1,000			

WEIGHT OF BALES OF COTTON

In South Carolina the average weight of a bale of cotton is 355 pounds, in Florida 375 pounds and in Georgia 407 pounds. Sea island bales average slightly less than 400 pounds each. Round bales which weigh about 250 lbs. are counted as half bales. In foreign countries the weight of a bale of cotton varies from 220 pounds in Iran (Persia) to 750 pounds in Egypt.

LOAVES OF BREAD FROM BARREL OF FLOUR

One barrel of flour is considered sufficient for an average of 270 one-pound loaves of bread. About four and six-tenths bushels of wheat are used in milling the grain into flour, but patent flours require one-fifth more wheat for a barrel, by millers' estimates.

COMPOSITION OF COAL

ULTIMATE

Kind of Coal	Percentage of				
	Carbon	Hydrogen	Sulphur	Nitrogen	Oxygen
Anthracite	81.45	2.63	0.54	0.79	4.78
Semi-bituminous	79.81	4.70	1.59	1.27	4.65
Bituminous	77.16	5.27	1.06	1.47	8.50

PROXIMATE

Kind of Coal	Percentage of			
	Moisture	Volatiles	Fixed Carbon	Ash
Anthracite	2.93	4.55	82.71	9.81
Semi-bituminous	2.50	19.31	70.27	7.92
Bituminous	2.48	33.70	57.28	6.54

COAL COMBUSTION

The British Thermal Unit (B.t.u.) is the quantity of heat required to raise the temperature of one pound of water from 62 degrees to 63 degrees Fahrenheit, or 11180 of the amount of heat necessary to raise one pound of water from 32 degrees (the freezing point) to 212 degrees (the boiling point) If combustion is complete, the following is the result:

1 pound of Carbon burned to Carbon Dioxide 14,600 B.t.u.
1 pound of Carbon burned to

Carbon Monoxide 4,450 B.t.u.
1 pound of Carbon burned from Carbon Monoxide to Carbon Dioxide 10,150 B.t.u.
1 pound of Hydrogen burned to Water 62,000 B.t.u.
1 pound of Methane (CH₄) burned to Carbon Dioxide and Water 23,550 B.t.u.
1 pound of Sulphur burned to Sulphur Dioxide 4,050 B.t.u.

WORKING QUALITIES OF WOOD

Source: Wood Handbook, Forest Products laboratory

Softwoods	Cypress, southern	Hardwoods	Difficult to work
Easy to work	Fir, balsam	Easy to work	Ash, commercial white
Cedar, incense	Fir, white	Alder, red	Beech
Cedar, northern white	Hemlock, eastern	Basswood	Birch
Cedar, Port Orford	Hemlock, western	Butternut	Cherry
Cedar, southern white	Pine, lodgepole	Chestnut	Elm
Cedar, western red	Redwood	Poplar, yellow	Hackberry
Pine, northern white	Spruce, eastern	Medium to work	Hickory, true and pecan
Pine, ponderosa	Spruce, Sitka	Birch, paper	Honeylocust
Pine, sugar	Difficult to work	Cottonwood	Locust, black
Pine, western white	Douglas fir	Gum, black	Maple
Medium to work	Larch, western	Gum, red	Oak, commercial, red
Cedar, eastern red	Pine, southern yellow	Gum, tupelo	Oak, commercial, white
		Magnolia	
		Sycamore	
		Walnut, black	

WHAT CANNEL COAL IS

Cannel coal, produced in the United States chiefly in Cannelburg, Ind., and in the Jellico district in Kentucky, has an unusually high percentage of volatile matter—around 50 per cent. It ignites easily and burns with a luminous flame, and for this reason is much

used in open fireplaces, but its principal value is in the gas industry for enriching gas made from other coal. The name "cannel" is a corruption of "candle" by which the coal was originally designated. Cannel coal was formed from plant spores.

MOTHERS' DAY IN THE UNITED STATES

Mothers' Day was established in 1907 by Miss Anna Jarvis of Philadelphia, whose mother died in 1906. She took up the task of dedicating the second Sunday in May to the memory of American mothers. Philadelphia first observed it May 10, 1908. Many states have followed, and in 1913 a joint resolution

was passed by Congress to make the second Sunday of May a national holiday, "dedicated to the memory of the best mother in the world, you mother." In 1913 it began to be observed also in England. Its badge is the white carnation.

STATUTORY WEIGHTS OF THE BUSHEL

Source: Questionnaire answered by state departments of state or agriculture

In the states omitted from the list, Arizona, Massachusetts, New Jersey, Utah and Washington, and in the District of Columbia, commodities are sold by 100-pound measures, there being no statutory stipulations regarding weight per bushel (1938).

	Apples	Apples, dried	Barley	Beans, castor	Beans, dried	Beets	Blue grass seed	Bran	Buckwheat	Carrots	Clover Seed	Corn on cob	Corn, shelled	Corn meal	Flax seed	Hemp seed	Hungarian grass seed	Millet seed	Oats	Onions	Peaches, dried	Peas, dried	Potatoes, Irish	Potatoes, sweet	Rye	Timothy seed	Turnips	Wheat

¹Table size, 60 for Mangelwurzel, ²in the pod, 26, ³summer; 55 for rutabaga, ⁴unpeeled; 38 for peeled, ⁵until Dec. 1; 68 afterwards, ⁶from Nov. 1 to Jan. 1; 68 afterwards, ⁷Japanese, ⁸unshelled, ⁹rutabaga; 50 for English, ¹⁰navy; 56 for lima, 47 for broad Windsor, 50 for scarlet or white runner pole, ¹¹October and November, 80; December and January, 72, ¹²native, 22 for English, ¹³70 after Dec. 1, ¹⁴unpeeled; 40 for peeled, ¹⁵green; 68 for dry.

By a joint congressional resolution of June 2, 1905, 42 cubic inches, was adopted as standard, 1836 the Winchester bushel, containing 1 ar.

MISCELLANEOUS HANDY FACTS

Doubling the diameter of a pipe increases its capacity four times.

Double riveting is from 16 to 20 per cent stronger than single.

To get the pressure in pounds per square inch of a column of water multiply height of inches in feet by 434.

SHIPPING MEASURE

1 register ton = 100 cubic feet
1 United States shipping ton = 40 cubic feet or 32.14 United States bushels or 31.16 imperial bushels

1 British shipping ton = 42 cubic feet or 32.72 imperial bushels or 33.75 United States bushels.

COMPUTING ORDINARY INTEREST

1. When the time is 60 days, move the decimal point in the principal two places to the left; the result is the interest for 60 days at 6 per cent, as \$1.42 is the interest for 60 days at 6 per cent of \$142.

2. When the time is not 60 days, move the decimal point in the principal two places to the left as in 1 above. Express the time as multiples of 60 days and multiply the result by each of these multiples and add their products, as: to find the interest for 90 days at 6 per cent of \$142—
90 days is 1½ 60 days

\$1.42 is the interest for 60 days

.71 is the interest for 30 days

\$2.13 is the interest for 90 days

3. When the rate is not 6 percent compute the interest at 6 percent as in 1 and 2 above, divide the result by 6 to find the rate at 1 per cent and then multiply by whatever the interest is, as:

The interest on \$142 for 90 days at 1 per cent is \$2.13 divided by 6 or \$0.355. Thus the interest at 4 per cent is 4 times this or \$1.42.

The nautical mile = 6,080 ft; 1 statute mile = 5,280 ft.

To convert miles into nautical miles multiply by .8684.

To convert nautical miles into miles mul-

tiply by 1.1517.

To convert statute miles into kilometers multiply by 1.6093.

To convert kilometers into statute miles multiply by 0.6213.

MARINER'S MEASURE

9 inches..... 1 span
6 feet..... 1 fathom
120 fathoms..... 1 cable length
7 ½ cable lengths..... 1 mile

5,280 feet..... 1 statute mile
6,080 feet..... 1 nautical mile or knot
3 knots..... 1 marine league

DEFINITIONS OF MARITIME TERMS

Displacement is the amount of water displaced by a vessel. If a vessel is floating in equilibrium in still water, the weight of the water she displaces equals the weight of the vessel herself with everything on board.

The displacement in cubic feet when floating in salt water divided by 35 (36 if in fresh water) gives the total weight of a ship and her cargo in tons, as 35 cubic feet of salt water weighs one ton (2,240 pounds) and 36 of fresh water the same amount.

This displacement of a steel vessel is calculated to the molded lines (that is, to the outside of the frame) and no allowance is made as a rule for the thickness of the shell plating. For wooden vessels (motor boats, tubs, lighters, etc.) the displacement is calculated to the outside of the planking.

Dead weight is the carrying capacity of a vessel in tons of 2,240 pounds.

Register ton measurement is the measurement based on a ton of 2,240

pounds occupying 100 cubic feet.

Gross tonnage is the measurement in register tons of the interior capacity of the entire ship.

Net tonnage is the Measurement in register tons upon which payment is made, and is the volume of the space available for cargo and passengers.

Block coefficient is the ratio of the volume of the displacement to the volume of a block having the same length, breadth and draft as the vessel. Cargo vessels have block coefficients ranging from .75 to .85, while fast passenger steamers have block coefficients of about .65.

If the length, width and draft of a vessel are multiplied by the block coefficient and this product divided by the weight of water per ton (36 cubic feet for fresh and 35 for salt water per ton of 2,240 pounds) the displacement of the vessel will be obtained.

STORAGE SPACE REQUIRED FOR DIFFERENT MATERIALS

Example—A steamer has a capacity of 180,000 cubic feet for carrying coal. How many tons will she carry?

From the table, average American coal stows 43 cubic feet per ton of 2,240 pounds, so $180,000 \div 43 = 4,186$ tons—the number she

would carry.

Note—The following table is based on a ton of 2,240 pounds. If the number of cubic feet per ton of 2,000 pounds is required, multiply the figures given by .892.

Material	*Cub. ft. per ton	Material	*Cub. ft. per ton	Material	*Cub. ft. per ton	Material	*Cub. ft. per ton

16 ounces = 1 pound
28 pounds = 1 quarter
4 quarters or 112 pounds = 1 hundred-

weight
20 hundredweight or 2,240 pounds = 1 ton

ICE AND SNOW

At 32° F. 1 cu. ft. of ice weighs 57.50 lb.; 1 lb. of ice at 32° F. has a volume of 0.0174 cu. ft. = 30.667 cu. in.

Relative volume of ice to water at 32° F., 1.0855, expansion 8.55 per cent. Specific gravity of ice = 0.922. Water at 62° F., 1. Specific heat of ice is 0.504, of water, 1.

The latent heat of fusion of ice is 143.6 B.t.u. per lb.

1 cu. ft. of fresh snow, according to humidity of atmosphere, weighs from 5 lb. to 12 lb., 1 cu. ft. of wet snow may weigh from 15 lb. to 50 lb.

THE STATE OF ILLINOIS

Illinois Government

SEAL OF THE STATE OF ILLINOIS

At the second session of the first general assembly of the new state of Illinois, held at Kaskaskia in 1819, the secretary of state was authorized to "procure a permanent state seal of such device agreed upon by the governor and justices of the Supreme court." The governor and the Supreme court justices procured a seal, but no records or report of their act have been found in state archives. It is believed that the seal of the old northwest territory formed the basis of the design and selection. The

seal also was somewhat similar to the great seal of the United States. It is considered significant that in the Illinois first seal "state sovereignty" preceded "national union." The seal's first impression appears upon a proclamation of the first governor, Shadrach Bond, Sept. 24, 1820, which divided the state into three electoral districts and gave the people their first right to vote for presidential electors. The first seal was recut in 1839 and some minor changes were made, such as omission of the constellation, and the eagle was displayed looking to the left instead of to the right.

There was a new seal cut in 1868, with further changes in the design, and it was charged the change was without legislative authority. It was again recut during the term of Henry D. Dement as secretary of state, 1881-85.

GOVERNMENT OF THE STATE OF ILLINOIS

Source: Secretary of State

The government of the state of Illinois is made up of an Executive department, a Legislative department and a Judicial department.

EXECUTIVE DEPARTMENT

The Governor, Lieutenant Governor, Secretary of State, Auditor of Public Accounts, Attorney General and Superintendent of Public Instruction are elected for a term of four years, and the State Treasurer for a term of two years.

Under the Illinois Constitution, the Treasurer is the only officer who can not serve two consecutive terms. In addition, nine University of Illinois Trustees are elected for six-year terms. Three of the nine are elected each two years.

O'Sullivan, Comptroller; Shipping Department, Chief Clerk: George M. Brown; Supply Department, Chief Clerk: Joe Firth, Jr.

State Treasurer

State Treasurer: Conrad F. Becker, Red Bud, term expires 1946; Assistant State Treasurer and Springfield Office Manager: Arnold P. Benson; Administrative Assistant: Lester D. Kluck; Chief Revenue Clerk: Charles Galezio; Chief Clerk: Frank E. Jones; Chief Warrant Clerk: Harold G. Allison; Chief Clerk, Chicago Offices: Homer G. Sailor, Chicago.

Auditor of Public Accounts

Auditor: Arthur C. Lueder, Chicago, term

expires 1948; Executive Assistant: Christian G. Kiessling; Secretary: Mary E. Means; Chief Clerk: James Hardie; Personnel Director: Simon A. Murray; Chief Bank Examiner, Chicago and Northern Division: A. A. Mueller; Chief Bank Examiner, Springfield and Southern Division: Frank A. Adams; Chief Building and Loan Examiner: J. B. Murphy; General Receiver Closed Illinois State Banks: Harry R. Spellbrink, Chicago; Victory Tax Division, Chief Clerk: W. R. Kammerling; Public Aid Division, Chief Clerk: Kenneth T. McGovern.

Superintendent of Public Instruction

Superintendent: Vernon L. Nickell, Champaign, term expires 1946; First Assistant: C. C. Byerly; Secretary to the Superintendent: Gladys Ruckel; Chief Clerk: Robert G. Smith.

CIVIL ADMINISTRATION CODE DEPARTMENTS

Boards and commissions created by statute for the purpose of performing special administrative tasks multiplied to such an extent that in 1917 the executive department was reorganized completely. The Civil Administrative Code, which now consists of 13 departments (aeronautics, agriculture, conservation, finance, insurance, labor, mines and minerals, public health, public safety, public welfare, public works and buildings,

registration and education, revenue), represents a consolidation of previously independent groups. In addition, other permanent boards and commissions have been created, and form a part of the state's administrative system.

These offices are filled by appointment of the governor and with the advice and consent of the senate. A list of Code department officers follows:

OFFICERS OF CODE DEPARTMENTS, 1945

SENATORIAL
DISTRICTS
IN ILLINOIS, 1901

WHERE THE 1944 STATE DOLLAR CAME FROM AND WHERE IT WENT

For the Fiscal Year Ended June 30, 1944

Source: The State Dollar, by George B. McKibbin, director of finance

Revenue

31 $\frac{7}{8}$ cents: retailers' occupation tax.
13 $\frac{1}{2}$ cents: motor fuel tax.
8 $\frac{3}{4}$ cents: motor vehicle license tax.
7 $\frac{3}{4}$ cents: liquor taxes.
10 $\frac{3}{8}$ cents: federal aid (including $\frac{3}{8}$ cents for blind pensions, 2 cents to dependent children and 2 $\frac{1}{2}$ cents for highways).
5 cents: corporation and insurance taxes.
3 $\frac{1}{8}$ cents: inheritance tax and Illinois Central railroad tax.
4 $\frac{1}{2}$ cents: public utility tax.
5 $\frac{1}{4}$ cents: cigarette tax.
4 $\frac{3}{4}$ cents: all other revenues.

(These figures represent a dollar of receipts deposited in the State treasury for the fiscal year ended June 30, 1944. Receipts for trust funds and treasury balances are not included.)

Expenditures

23 $\frac{1}{8}$ cents: old age pensions (both state and federal).

12 $\frac{1}{4}$ cents: charitable and penal (state hospitals, prisons, homes).

14 $\frac{1}{2}$ cents: education (common school distribution, University of Illinois, teachers colleges, other school purposes).

13 $\frac{1}{8}$ cents: state highways (construction, maintenance, policing).

4 $\frac{1}{2}$ cents: aid to dependent children.

4 $\frac{1}{8}$ cents: emergency relief (including $\frac{3}{8}$ cents for blind pensions).

3 $\frac{3}{8}$ cents: motor fuel tax refunds, collection costs, supervision of allotments, secretary of state—auto department.

7 $\frac{1}{4}$ cents: interest and retirement of state debt (incurred for highways, soldiers' compensation and relief).

10 $\frac{1}{8}$ cents: all other purposes (legislative, executive, judicial).

(These figures represent a dollar of warrants issued for the fiscal year ended June 30, 1944.)

ELECTION CALENDAR

Source: Official List of State and County Officers

GENERAL ELECTIONS

The principal general elections in Illinois occur on the following dates:

Tuesday After the First Monday in November

For Presidential Electors, Governor, Lieutenant Governor, Secretary of State, Auditor of Public Accounts, Attorney General, State Senators in even-numbered districts, Clerk of Superior Court of Cook County, Clerks of the Circuit Courts, Recorders, State's Attorneys, County Coroners and County Auditors, every fourth year, counting from 1872.

For State Treasurer, Representatives in Congress, Representatives in the General Assembly and three Trustees of the University of Illinois for term of six years, every second year, counting from 1872.

For United States Senator, every six years, counting from 1914 and 1918, respectively.

For clerk of Supreme Court and clerks of the Appellate Court, every sixth year, counting from 1872.

For Superintendent of Public Instruction, State Senators in odd-numbered districts, clerk of the Criminal Court of Cook County, county and probate clerks, county and probate judges, county treasurers, county superintendents of schools and sheriffs, every fourth year, counting from 1874.

For judges of the Superior Court of Cook County, twenty-one judges every sixth year, 1941 and thereafter. (One judge, first Monday in June every sixth year, counting from 1945, and six judges counting from 1946).

For chief justice, clerk and bailiff of the Municipal Court of Chicago, every sixth year, counting from 1912; for twelve associate judges of said court for term of six years, every second year, counting from 1908.

For county commissioners in counties not under township organization, one each for a term of three years.

First Monday in June

For judges of the Circuit Court, every sixth year, counting from 1873.

For judges of the Supreme Court, Fifth District, every ninth year, counting from 1873; Fourth District, every ninth year, counting from 1876; and First, Second, Third, Sixth and Seventh Districts, every ninth year, counting from 1879.

For judges of the Superior Court of Cook County, one every sixth year, counting from 1945, and six counting from 1946.

First Tuesday in April

For officers of cities in counties under township organization (not under commission plan) that have adopted the Act of 1885.

For mayor and commissioners in cities organized under the commission plan which

include wholly within their corporate limits a town or towns, quadrennially, counting from 1911.

For all town (township) officers, officers in cities containing one or more towns, and officers in villages whose boundaries coincide with boundaries of a town (township), annually.

Third Tuesday in April

For mayor and commissioners of cities organized under the commission plan (except such as include wholly within their corporate limits a town or towns), quadrennially, counting from 1911.

For officers of cities organized under the general law (except such as contain within their corporate limits one or more townships)

For officers of villages organized under the general law (except where the territorial limits coincide with the territorial limits of a township).

Second Saturday in April

For school directors in school districts; for boards of education of township high schools, community high school districts, non-high school districts and community consolidated school districts.

PRIMARY ELECTIONS

Second Tuesday in February

To nominate candidates to be voted for at the election on the first Tuesday in April, (Down State)

Last Tuesday in February

To nominate candidates to be voted for on the first Tuesday in April.

(Cook County)

To nominate candidates to be voted for at the election on the third Tuesday in April.

Second Tuesday in April

Every year in which a President of the United States is to be elected, for the purpose of electing delegates and alternate delegates to national nominating conventions, and for the purpose of securing an expression of the sentiment and will of the party voters with respect to candidates for nomination for the office of President of the United States.

Every year in which officers are to be voted for on the first Tuesday after the first Monday in November, to nominate candidates to be voted for at said election; also to elect State, ward and precinct committeemen and Senatorial committeemen.

GENERAL PROVISIONS

A primary for the nomination for all other officers, nominations for which are required to be made under the provisions of the primary law, shall be held seven weeks preceding the date of the general election for such offices, respectively.

NAVY PIER, CHICAGO

Navy Pier, first known as the municipal pier, was opened in 1916. The pier extends 3,000 feet into Lake Michigan from the foot of Grand avenue. The headhouse, the building at the shore end of the pier, contains the administration offices and the entrances to the two freight and passenger buildings. Each of these is two stories in height, 2,340 feet long and 100 feet wide. The upper story is for passengers, the lower for freight. The

total width of the pier is 292 feet. On the outer end is a recreation building, 665 feet long, containing a dance and concert hall, restaurant and other features of entertainment. It cost approximately \$3,400,000 not including engineering and inspection. During the war, the pier was converted to house naval personnel, which it still does at the present time.

USE PLANES TO CARRY FARM PRODUCE

The most promising new development in the air cargo field is in the transport of agricultural products, Eugene E. Wilson, chairman of the Aircraft Industries association, claims.

"Almost one-third of the fruits and vegetables shipped from out of the great 'winter garden' area might go by air if the air freight rate could be brought down to 10 cents per

ton mile, a foreseeable goal," he said. "Important among factors now retarding a reduction in rates are arbitrary restrictions on load limits, landing speeds, et cetera, which prevent the use by operators of the full competency of cargo aircraft specially designed for the job of carrying farm produce."

AGE OF EARTH ESTIMATED

A group of scientists at Yale university, the National Research Council and other educational institutions have calculated the approximate age of the world to be from two to three billion years, by applying three methods of computation. The first is based upon the age of radioactive rock, because of the fact that radium in such rock disint-

grates into lead at a clocklike rate. The second is upon the rate of solution of soluble rock, that is, the salts found in the ocean. The third method is based upon measurements and computations of the formation of the crust of the earth as far down as scientists have examined.

COUNTY GOVERNMENT IN ILLINOIS

Sources: Illinois Blue Book, 1943-44, and Official List of State and County Officers, April, 1945

There are 102 counties in Illinois. The largest in area is McLean, with 1,161 square miles; the smallest is Putnam, with 170 square miles. The largest in population is Cook, with 4,063,342 and 79 municipalities, according to the 1940 census; the smallest is Hardin, with 7,759 in population.

So that official fees and salaries may be regulated, the counties in the state are in three classifications: (1) of not more than 25,000 population, of which there are 52 such counties; (2) more than 25,000, but less than 500,000, of which there are 49 counties; (3) more than 500,000, Cook being the only such county.

Under the state constitution there are two distinct types of county organization in Illinois; township organization, and counties not under township organization. The government of Cook county does not come within either of these classes but has certain features of both.

Counties under township organization are subdivided into local areas called townships or civil towns. Each township has a supervisor and all supervisors meeting together constitute the county board. In each county, the supervisor is elected for two years, and half of the total number must be elected in alternate years. The chairman of the board of supervisors and two citizens, appointed by the county judge, constitute the county board of review. There are 84 such counties in Illinois.

In counties of less than 75,000 population, the question of abandoning township organization may be submitted to voters upon the petition of at least 5 per cent of legal voters. In counties of 75,000 or more, the

petition must be signed by one-fifth of the legal voters.

Counties not under township organization maintain governing boards which consist of three commissioners elected by the entire county. One is elected each year for three years. The commissioners also constitute the Board of Health and the Board of Review for the county.

County organization in Illinois dates back to 1779 when, after the conquest of Kaskaskia and Vincennes by George Rogers Clark in 1778, the "County of Illinois" was established by legislative enactment of Virginia and the new county, vaguely defined as to boundaries, was attached to that commonwealth.

This was passed in October, 1778 and proclamation of the act made June 17, 1779. Capt. John Todd was appointed "County Lieutenant Commandant" and organized the government with the county seat at Kaskaskia. But the machinery of county government was never effectually set up, and it soon ceased to run.

In 1784, Virginia surrendered to the general government all claims to this territory and in 1787 "an act for the government of the territory of the United States northwest of the Ohio River" was passed by the Continental Congress. Under this ordinance Gen. Arthur St. Clair was appointed governor of the territory, and in 1790, organized by proclamation, the county of St. Clair, named in honor of himself.

The youngest counties are Douglas, created Feb. 8, 1859, and Ford, the 102nd, coming into existence Feb. 17, 1859.

¹Village; title of head of government is "President."

CHICAGO WATER TOWER

The first attempt to establish a water system in Chicago was made in 1834, when the Board of Trustees of the town of Chicago paid \$95 to have a well dug at Cass and Michigan streets. This served until 1842, when a twenty-four horsepower engine was installed by a private concern at the foot of Lake street. Water was pumped from the Lake through mains of hollowed cedar logs. In 1851 the system was taken over by the

city after having been an issue of the mayorality campaign. Two years later, pumping works, considered a marvel of their time, were housed in a brick tower at Chicago and Michigan avenues. The engines were operated until 1901, but the brick structure was replaced by the 150-foot stone tower and buildings now standing on the site, the only municipal buildings to withstand the Chicago fire in 1871.

SPRINGFIELD, CAPITAL OF ILLINOIS

Springfield was settled in 1818 and made the Sangamon county seat in 1821. In 1823 it was platted and for a brief period was called Calhoun. It was incorporated as a town in 1832, and in 1840 was chartered as a city.

It is 10 square miles in area and, according to the U. S. census, in 1940, had a population of 75,503. A recent estimate of the Springfield Chamber of Commerce places the population at approximately 80,000.

State Capitol

In spite of the fact that citizens of Vandalia in the summer of 1836 tore down the building which had served as the state capitol for 12 years and spent \$16,000 on the construction of a new one, the fight against removal of the capital to Springfield was futile. In 1837 the General Assembly yielded to the faction led by Abraham Lincoln and authorized the building of a new capitol at Springfield. The assembly bought the building in Vandalia and deeded it to Fayette county for use as a county court house until it was repurchased by the state.

The first two sessions of the Illinois General Assembly (1818-20) were held in a rented building at Kaskaskia, which had been the territorial capital since 1809. In 1820 a two-story wooden capitol was built at Vandalia; it was destroyed by fire three years later, and was succeeded by a larger brick structure.

The building begun at Springfield in 1837 cost \$260,000 and took 15 years to complete. Thirty years later it was too small.

In 1867, the General Assembly passed a

bill calling for the erection of a new state capitol, which was finished in 1888 at a cost of about \$3,800,000.

The old capitol, which had been sold to Sangamon county for use as the county court house, was vacated in 1876 in favor of the new capitol, which was still far from completion. Voters in 1877 rejected the proposal that \$531,712 be appropriated for additional construction, and it was not until 1885 that the proposal resubmitted to the people, won approval.

The present capitol, situated on a nine-acre plot, is in the form of a Latin cross. The circular foundation, 92½ feet in diameter and upon which the vast dome rests, is 25½ feet below the grade line, based on solid rock.

The extreme length of the building from north to south is 379 feet, and from east to west 268 feet. The height from the ground line to the top of the dome is 361 feet, and to the tip of the flagstaff 405 feet, the highest building in central Illinois. This led to the choice of the State House dome for the installation of the red neon beacon for aviators.

Other Public Buildings

Centennial Building. The Illinois Centennial building, designed to commemorate the hundredth anniversary of the admission of the state into the union, was built at a cost of \$3,000,000. The cornerstone was laid Oct. 5, 1918, and the building was completed in July, 1923.

Abraham Lincoln and Mary Todd were married in the home that stood on the northwest corner of the site of the building, and Mrs. Lincoln died there in 1882, 17 years after the president's assassination.

One of the chief architectural features of the building, which is made of limestone, is a row of 12 Corinthian columns. On the frieze on the north, west, south and east sides of the building are inscribed the names of prominent Illinoisians. The entrances to the building are at the east and west ends and are alike in all details. Seven steps below the two entrances is Memorial hall on either side of which are ranged in glass cases the flags of the Illinois regiments.

The Centennial building houses the general division of the state library, the state historical library, a museum, several government offices, and the Lincoln room, which contains valuable relics of the president.

Archives Building. The Archives building, erected west of the Centennial building, was dedicated June 16, 1937 and completed in 1938 at a cost of more than \$800,000. The third of its type in the United States, this building will house non-current and man ysemi-current state documents. There

are 15 miles of file cases in the building, and modern methods of preserving documents and guarding against deterioration because of atmospheric changes will be employed. The building is fireproof.

Armory. The armory was completed in 1937 north of the capitol on the site of the old armory which burned in 1934. The new structure includes the office of the adjutant general and other state offices in addition to a large auditorium and drill hall.

Power House. The Power House is situated north of the Capitol, across Monroe Street, and furnishes heat and electricity to the Capitol group of buildings.

Supreme Court Building. The Supreme and Appellate courts of Illinois occupy a \$500,000 structure at the southeast corner of Second street and Capitol avenue, facing the State House. The act authorizing its construction was passed in 1905, and the building was dedicated in 1908.

On the first floor are the offices of the clerks of the courts and the attorney general. The state law library and court rooms are on the second floor. The third floor is devoted to living quarters for the Supreme court justices while court is in session.

Executive Mansion. The Governor's mansion, an imposing brick structure, painted white and surrounded by landscaped grounds, was built in 1855 at a cost of \$31,000 and contains 28 rooms. The offices of the governor are on the ground floor.

RETAILERS' OCCUPATION TAX

CONGRESSIONAL DISTRICTS IN ILLINOIS, 1901

Illinois elects 27
congressmen, one
from each of the 25
districts and two
from the state at
large.

Cook county and Chicago districts, 1 to 9 and a part of 10, are shown elsewhere in this section.

Districts are shown as apportioned by the legislature in 1901.

Springfield and Lincoln

Besides Sangamon county court house, which was the State capitol when Lincoln was a member of the state legislature, and the Lincoln Home, which is maintained as a museum, Springfield is rich with places directly associated with the president. Bronze memorial tablets will be found at the following places:

Site of Speed's General store, 107 S. Fifth street. Above this store Lincoln shared a room with Speed in 1837.

Site of Stuart and Lincoln's law office (1837-41), 109 N. Fifth street.

Site of Logan and Lincoln's law office

(1841-43), 203 S. Sixth street.

Site of Lincoln and Herndon's law office (1843-65), 103 S. Fifth street.

Site of the Globe Tavern, 315 E. Adams street, where Mr. and Mrs. Lincoln lived until May 2, 1844. Robert Lincoln was born here.

C. M. Smith building, 528 E. Adams street. In a room on the third floor of this building Lincoln wrote his first inaugural address in January, 1861.

Site of Illinois State Journal, 116 N. Sixth street. Here Lincoln received the news May 18, 1860 of his nomination for the presidency.

Lake Springfield

Lake Springfield, one of the largest artificial lakes in the middle west, was completed and dedicated in 1935 as a water supply and recreation project. It is 15 miles in length,

has 40 miles of shore line, covers 4,300 acres of land, contains 2.4 billion gallons of water with an average depth of 15 feet.

PRINCIPAL WATERWAYS IN ILLINOIS

Source: State Division of Waterways

Apple Creek—Rises in Morgan county; flows southwesterly through Green county into Illinois; length about 53 miles. Principal tributaries are Wolf run, Coal creek and Bear creek; drainage area 435 sq. mi. (Mississippi river drainage.)

Big Bureau Creek—Rises in Lee county; flows southwest to Bureau county, thence southeast to Illinois river; length about 60 miles; drainage area 502 sq. mi. (Mississippi river drainage.)

Big Muddy River—Rises in Marion county; flows south across Jefferson county to the southwestern part of Franklin county, thence turns southwesterly into Mississippi river; at the southwest corner of Jackson county; length about 94 miles. Principal tributaries are Rayse creek, Casey Fork, Middle Fork, Ewing creek, Pond creek, Little Muddy river, Reese, Beaucoup, Galun, Kinkaid and Cedar creeks; drainage area 2,360 sq. mi. (Mississippi river drainage.)

Cache River—Rises in Union county; flows southerly across Union county into Ohio river; length about 73 miles. Principal tributaries are East Branch, Big Cypress creek, Big creek and Mill creek; drainage area 720 sq. mi. (Ohio river drainage.)

Cahokia Creek—Rises in Montgomery county; flows southwesterly across the southeast corner of Macoupin county and the northwest corner of Madison county through East St. Louis into Mississippi river; length about 56 miles; drainage area 360 sq. mi. Principal tributaries are Sweet creek, Indian creek and Canteen creek. (Mississippi river drainage.)

Chicago River—In its original state had two branches, the North Branch rising in Lake county and the South Branch rising at Kinzie and Thirty-first streets, Chicago; these branches unite to form the main stem of the Chicago river which flowed into Lake Michigan; length of North Branch 29 miles; original length of South Branch $6\frac{1}{4}$ miles; length of main stream $1\frac{1}{4}$ miles. By the construction of the Chicago Drainage canal the flow in the South Branch and main stem has been reversed, the flow now being from Lake Michigan toward the Illinois river; drainage area (in natural state) 226 sq. mi. (Lake Michigan drainage.)

Des Plaines River—Rises in Kenosha county, Wis.; flows southerly to the state

line, thence through Lake and Cook counties, Ill., to the central part of Cook county, thence southwesterly across Cook and Will counties to the western boundary of Will county where it joins the Kankakee river to form the Illinois; length 111 miles, of which 92 miles are in Illinois and 19 in Wisconsin; total drainage area 1,366 square miles of which 1,210 are in Illinois. Principal tributaries are Salt creek, Jackson creek, and Du Page river. (Mississippi river drainage.)

Du Page River—Has its source in the West fork, which rises in Cook county; flows southerly through Du Page and Will counties into Des Plaines river, about four miles above its mouth; length about 74 miles; drainage area 326 sq. mi. (Mississippi river drainage.)

Edwards River—Rises in Henry county; flows westerly into Mississippi river in Mercer county; length about 67 miles; drainage area 446 sq. mi. (Mississippi river drainage.)

Embarrass River—Rises in Champaign county, near Urbana; flows southerly through Champaign, Douglas and Coles counties to near the central part of Jasper county, thence southeasterly through Jasper, Crawford and Lawrence counties into the Wabash river in Lawrence county; length about 132 miles; drainage area 2,260 sq. mi. Principal tributaries are Scattering Fork, Brushy Fork, Brush, Cottonwood, Range and Crooked creeks, North Fork, Big creek and Muddy creek. (Ohio river drainage.)

Fox River—Rises in the northern part of Waukesha county, Wis.; flows southerly to the state line and through McHenry and Kane counties, Ill., thence southwesterly through Kendall and La Salle counties into Illinois river at Ottawa; length about 172 miles, of which 103 miles are in Illinois; drainage area 2,580 sq. mi., of which 1,640 are in Illinois. Principal tributaries in Illinois are Nippersink creek, Rock creek, Somonauk and Big Indian creeks. (Mississippi river drainage.)

Grand Calumet River—Rises in Lake county, Ind.; flows westward across Lake County to the state line, thence northward to Cook county and into Lake Michigan; length about 30 miles; drainage area 689 sq. mi., of which 234 are in Illinois. Principal tributary is Little Calumet river. Calumet

ILLINOIS WATERWAYS—Cont.

lake, having an area of $3\frac{1}{4}$ sq. mi., is tributary about six miles above the mouth. (Lake Michigan drainage.)

Green River—Rises in Lee county; flows southwesterly through Lee, Bureau and Henry counties into Rock river in Henry county; length about 93 miles; drainage area 970 sq. mi. (Mississippi river drainage.)

Henderson River—Rises in Knox county; flows west and southwest into Mississippi river in Henderson county; length about 50 miles; drainage area 598 sq. mi. (Mississippi river drainage.)

Illinois River—Formed by the junction of the Des Plaines and Kankakee rivers in Grundy county; flows southwesterly across the state into Mississippi river at the boundary between Jersey and Calhoun counties; length about 267 miles; drainage area 28,100 sq. mi., of which 1,020 are in Wisconsin and 3,140 in Indiana. Principal tributaries are Des Plaines, Kankakee, Fox, Vermilion, Mackinaw, Spoon and Sangamon rivers; Crooked, McGees, Apple and Macoupin creeks. (Mississippi river drainage.)

Iroquois River—Rises in Jasper county, Ind.; flows southwesterly across Jasper and Newton counties, Ind., into Iroquois county, Ill.; thence turns north and empties into Kankakee river in Kankakee county; length about 87 miles, of which 42 miles are in Illinois and 45 miles in Indiana; drainage area 2,175 sq. mi., of which 1,240 are in Illinois. Principal tributaries are Sugar, Spring and Beaver creeks. (Mississippi river drainage.)

Kankakee River—Rises in Laporte county, Ind.; flows westerly to the state line forming the boundary between Porter and Jasper counties and Lake and Newton counties in Indiana; in Illinois it flows northwesterly to the southwest corner of Will county and unites with the Des Plaines to form the Illinois river in Grundy county; length about 135 miles, of which 50 miles are in Illinois and 85 miles in Indiana; drainage area 5,280 sq. mi., of which 2,155 are in Illinois. Principal tributaries in Illinois are Trimm creek, Exline slough, Iroquois river, Rock creek and Forked creek. (Mississippi river drainage.)

Kaskaskia (or Okaw) River—Rises near Urbana; flows southwesterly across Champaign, Douglas, Moultrie, Shelby, Fayette, Clinton, St. Clair and Randolph counties into Mississippi river in Randolph county; length about 212 miles; drainage area 5,670 sq. mi. Principal tributaries are Lake Fork, Apple, West Okaw, Robinson, Richland, Wolf, Beck's, Mitchell, Big, Booz, Camp, Hickory and Hurricane creeks, East Fork, Crooked, Shoal, Sugar, Elkhorn, Mud, Silver, Richland and Horse creeks. (Mississippi river drainage.)

Kishwaukee River—Rises in McHenry county; flows westerly across McHenry and Boone counties into Rock river in Winnebago county; length about 57 miles; drainage area 1,200 sq. mi. (Mississippi river drainage.)

Kishwaukee River (South branch or Kishwaukee river)—Rises in DeKalb county; flows northwesterly across DeKalb county into Kishwaukee river in Winnebago county; length about 58 miles; drainage area 412 sq. mi. (Mississippi river drainage.)

La Moine River (Crooked Creek)—Rises in McDonough county; flows south-

westerly to the eastern part of Hancock county; thence southerly through Hancock and Schuyler counties into Illinois river at the boundary between Schuyler and Brown counties; length about 97 miles; principal tributaries are LaHarpe creek and Camp creek; drainage area 1,360 sq. mi. (Mississippi river drainage.)

Little Calumet River—Rises in Laporte county, Ind.; flows westerly across Porter and Lake counties, Ind.; Cook county, Ill.; thence easterly into Grand Calumet river in Cook county; length about 56 miles; drainage area 608 sq. mi., of which 201 are in Illinois. (Lake Michigan drainage.)

Little Wabash River—Rises near the boundary line between Shelby and Coles counties; flows southerly through Coles, Shelby and Effingham counties to the central part of Clay county, thence in a southerly course across Clay, Wayne and White counties and empties into Wabash river about 15 miles above its mouth at the boundary line between White and Gallatin counties; length about 160 miles; drainage area 2,180 sq. mi. Principal tributaries are Big, Fulfer, Salt, Bishop, Crooked and Muddy creeks, Fox river, Sugar creek, Elm creek and Skillet fork. (Ohio river drainage.)

Little Wabash River (Skillet Fork)—Rises near the boundary between Clay and Marion counties; flows southerly near the eastern boundary of Marion county to the Jefferson county line, thence turns south-easterly across Wayne county and empties into Little Wabash river in the central part of White county; length about 78 miles; drainage area 1,050 sq. mi. Principal tributaries are Brush, Horse and Fourmile creeks. Dry Fork and Haw creek. (Ohio river drainage.)

McGees Creek—Rises in Adams county; flows southeasterly across Brown and Pike counties into Illinois river in Pike county; length about 53 miles; drainage area 437 sq. mi. Principal tributaries are Walnut and Fishhook creeks, Middle Fork and South Fork. (Mississippi river drainage.)

Mackinaw River—Rises in Ford county; flows westerly across Ford, McLean, Woodford and Tazewell counties into Illinois river in Tazewell county; length about 110 miles; drainage area 1,100 sq. mi. Principal tributaries are Henline, Money, Panther, Walnut, Rock, Mud and Dillon creeks. (Mississippi river drainage.)

Macoupin Creek—Rises in Montgomery county; flows southwesterly across Macoupin and Greene counties into Illinois river at the boundary between Greene and Jersey counties; length about 90 miles; drainage area 970 sq. mi. Principal tributaries are Hurrican, Otter, Taylor's and Phill's creeks. (Mississippi river drainage.)

Pecatonica River—Rises in Iowa county, Wis.; flows southeasterly across Iowa and Lafayette counties to the state line; thence southerly to the southern part of Stephenson county, Ill.; thence easterly through Stephenson and Winnebago counties into the Rock river; length about 126 miles; drainage area 2,610 sq. mi., of which 770 are in Illinois. (Mississippi river drainage.)

Rock River—Has two sources, East and West branches. Considering the East Branch as the main stream, the river rises in Washington county, Wis.; flows southerly through

ILLINOIS WATERWAYS—Cont.

Dodge, Jefferson and Polk counties, Wis., to the Illinois state line; thence southwesterly through Winnebago, Ogle, Lee, Whiteside and Rock Island counties, Ill., into the Mississippi river about six miles below Rock Island, Ill.; length about 286 miles, about 157 of which are in Illinois; drainage area 10,820 sq. mi., of which about 5,200 are in Illinois. Principal tributaries are in Wisconsin, East Branch, West Branch, Crawfish river, Bark river, Bass creek, Turtle creek; in Illinois, Pecatonica river, Kishwaukee river, Elkhorn creek, Rock creek and Green river. (Mississippi river drainage.)

Saline River—Has its source in the North Fork which rises in Hamilton county; flows southeasterly across Hamilton and Gallatin counties into Ohio river in Hardin county, about nine miles below Shawneetown; length about 62 miles; drainage area about 1,230 sq. mi. Principal tributaries are North, Middle and South Forks, Bear, Contrary, Rector and Bankstone creeks. (Ohio river drainage.)

Salt Creek—Rises at the northern boundary of McLean county; flows southwesterly through McLean, DeWitt and Logan counties, forms a portion of the boundary between Mason and Menard counties and flows into Sangamon river at the northern boundary of Menard county; length about 92 miles; drainage area 1,850 sq. mi. Principal tributaries are North and Lake forks, Deer, Kickapoo and Prairie creeks. (Mississippi river drainage.)

Sangamon River—Rises in McLean county; flows southeasterly to Champaign county; thence southwesterly across Champaign and Platt counties to Decatur, Macon county, thence westerly until near Springfield, thence northwestward to its junction with Salt creek at the northern boundary of Menard county, thence westerly into Illinois river in Cass county; length about 200 miles; drainage area 2,360 sq. mi. Principal tributaries are Stevens, Camp, Mosquito and Buckhart creeks, South Fork, Sugar, Spring Prairie, Rock Salt and Crane creeks. (Mississippi river drainage.)

Sangamon River (South Fork)—Rises in Christian county; flows northwesterly

across Christian county to the central part of Sangamon county and empties into Sangamon river about three miles above River-ton; length about 55 miles; drainage area 1,130 sq. mi. Principal tributaries are Flat Branch, Bear and Horse creeks. (Mississippi river drainage.)

Shoal Creek—Has its source in the West fork which rises in Montgomery county; flows southerly through Montgomery, Bond and Clinton counties, into Kaskaskia river in Clinton county; length about 79 miles; drainage area 947 sq. mi. Principal tributaries are West, East, Middle and Dry forks, and Beaver creek. (Mississippi river drainage.)

Silver Creek—Rises in Macoupin county; flows southerly across Madison, St. Clair counties into Kaskaskia river in St. Clair county, just above New Athens; length about 61 miles; drainage area 502 sq. mi. Principal tributaries are East fork, Lake fork, Sugar fork, Mill, Little Silver and Loop creeks. (Mississippi river drainage.)

Spoon River—Has its source in the East fork which rises in Bureau county; flows southerly through Stark county to the northern part of Peoria county; thence southerly to the eastern part of Knox county, continuing southerly through Knox and Fulton counties into the Illinois river at Havana, Fulton county; length about 115 miles; drainage area 1,790 sq. mi. Principal tributaries are East and West forks, Indian, Walnut, French, Willow, Cedar and Put creeks. (Mississippi river drainage.)

Vermilion River—Has its source in the North fork which rises in Ford county; flows westerly to the central part of Livingston county, thence northwest through Livingston and La Salle counties into Illinois river at La Salle; length about 89 miles; drainage area 1,315 sq. mi. Principal tributaries are South fork, Rock, Scattering Rock and Long Point creeks. (Mississippi river drainage.)

Vermilion River (Middle Fork)—Rises in Ford county; flows southeasterly and joins the Salt fork in Vermilion county; length about 54 miles; drainage area 438 sq. mi. (Ohio river drainage.)

SOLDIER FIELD, CHICAGO

Soldier Field, one of the finest stadiums in the world, is located in Grant Park. It was originally called Grant Park stadium. On Aug. 20, 1925, the name of Soldier Field was officially adopted as a tribute to the Chicago soldiers who died in the world war, the Spanish-American war and the

Civil War. Soldier Field was dedicated on Nov. 27, 1926. The original cost of the huge edifice was approximately \$8,000,000. The normal seating capacity is 84,000, which can be increased to 180,000 if necessary. The arena is 300 feet wide and 1,200 feet long.

ILLINOIS WEATHER, 1944

Source: Illinois Crop Reporting Service, 1945

The two outstanding events of 1944 weather in Illinois were the heavy spring rains and resultant April floods in the Illinois, Mississippi, Wabash, Sangamon, and Kaskaskia River valleys, and the severe summer drought over most of the central and southern portions of the State.

Temperature averaged well above normal in both January and February, though in mid-February some severely cold weather occurred and the February snowfall was quite heavy. March and April were cold and wet—April precipitation for the State averaging the third heaviest of April record; the concentration of heavy showers between the 10th and 23rd of the month resulted in the overflow of rivers and small streams in the State, flooding approximately a quarter million acres of farm land and destroying thousands of acres of small grain. Further heavy rains in May in the Upper Mississippi Valley produced the highest river stage ever recorded at Quincy and flooded considerable farm acreage in Adams and Hancock counties.

May and June were the fourth warmest for those months in 55 years of record. June was the all-time driest at a number of stations in the central and southern divisions of the State and marked the beginning of the prolonged summer drought in those areas where precipitation in a number of localities totaled less than 25 percent of normal for the period from June 1 to August 15. Substantial rains during the latter part of August brought needed relief to most of the drought area. Further beneficial showers

occurred during September, particularly in the central portion. October, November, and December precipitation was subnormal, however, October experiencing one of the longest dry periods without measurable rain in the records of many stations. The persistent dryness until the end of the year in many localities of the southeast and extreme south resulted in accumulated moisture deficiencies for the year of 10 to more than 16 inches at a number of stations in those areas.

The last killing frost of spring occurred on May 5th or 6th in most localities of the north and central and on April 5th to 6th or May 7th in the south; the first killing frost of fall occurred quite generally about October 12th in northern Illinois and on October 16th to 17th or November 24th over most localities of the southern half. In general the length of the growing season in the north and central varied from 158 to 184 days and in the southern division from 158 to 197 days, though in a number of localities in the west central and extreme south the length of the season ranged from 200 to 233 days.

Sunshine averaged near normal to considerably above in most sections of the State in January, February, and June through October, but largely below normal in March through May and in November and December. November was the cloudiest in 55 years of State-wide record, and monthly sunshine generally amounted to only 15 to 30 per cent of normal.

Estimated storm damage from wind, hail, and lightning during the year exceeded 2.5 million dollars.

ILLINOIS POPULATION INCREASED FROM 1943 TO 1944

In a special report of March 10, 1945, the Bureau of Census reported that Illinois population increased 34,243 or 0.4 per cent from July 1, 1943 to the same date in 1944. The population figure, excluding Illinois armed forces members overseas, was given as 7,729,720 on July 1, 1944 compared to 7,695,477 the previous year.

The increase of population in 1943-44 is

in sharp contrast to the overall population drop in the state for the period 1940 to 1944. During those four years, census figures show a decrease of 167,321 or -2.1 per cent in population.

While Illinois population figures dropped for the period 1940 to 1944, the total U. S. Census showed a general increase of 893,996 or 0.7 per cent.

Illinois Population

URBAN AND RURAL POPULATION, 1890-1940

Source: U. S. Bureau of Census

Urban population, as defined by the U. S. Bureau of the Census, is in general that residing in cities and incorporated places of 2,500 or more, the remainder being classified as rural.

The farm population for 1930 and 1940 comprise all persons living on farms, regardless of occupation. Figures for 1920 include farm laborers and their families who, while not living on farms, nevertheless lived in strictly rural territory outside the limits of

any incorporated place. Allowance should be made for this in comparing the figures, and for the fact the 1920 census was taken in January, when many persons living on farms were temporarily absent, while the 1930 and 1940 census were taken in April, when the number of persons on farms was appreciably larger.

Urban-farm population comprises persons living on farms situated within the limits of incorporated places of 2,500 or over.

(A minus sign [—] denotes decrease, Per cent not shown where base is less than 100)

ADVICE FOR EXPECTANT FATHERS

Source: Maternity Center association

Remember always to ask the doctor what to do when you don't know. His advice is better than that of your neighbors or friends. They may have had babies but their experience is not to be compared with the doctor's knowledge.

Be as helpful as you can because sometimes the days are rather trying for your wife and she needs the comfort and understanding help that you alone can give. You were never more needed by your wife than you are these days.

You can learn to help take care of the baby after he comes—get him ready for bed at night, bathe him on Sundays. This will give your wife a rest and give you a chance to get better acquainted with your baby.

Now that you are expecting a baby you are anxious to secure the best kind of care for your wife.

It is important that she be under medical care from the very beginning. It will help a lot if you urge her to see a doctor as soon as she thinks she may be pregnant. She may like you to go with her the first time she goes. Don't be scared by what you hear about the "Dangers of Childbearing." Pregnancy is natural and should be normal. If your wife has a good doctor and follows his advice, there should be no cause to worry.

Talk things over with the doctor yourself and he will tell you everything you should know.

Here are the important things you should help your wife do:

1. Get the best doctor available—nothing is so expensive as poor medical advice.
2. Follow the doctor's instructions to the letter. Nothing that bothers your wife is too trivial to ask the doctor about.
3. Live simply, get eight hours sleep and some sunshine, some exercise, some fun and avoid fatigue.
4. Eat a balanced diet every day and drink plenty of water.
5. Make the best possible arrangements for confinement.
6. Make plans for the baby's care before it arrives so things will run smoothly from the very beginning.

COURTS IN ILLINOIS

Source: Illinois Blue Book, 1943-44

Law in Illinois is administered by a succession of Courts, with the State being divided into two parts, Courts outside of Cook County, Courts in Cook County. The Appellate Courts and the Supreme Court of Illinois, have State-wide power.

The minor courts are those of Justices of the Peace, which are located in townships. The office is elective.

Each county has a County Court, and the judges are elected for four year terms. Their salaries are determined by the population of the particular county.

Where a county has a population greater than 70,000, the people also may have a Probate Court. Otherwise, the County Court Judges decide probate cases.

ANNUAL SALARIES COUNTY JUDGES BASED ON POPULATION

Population	Salary
15,000.....	\$1,800
15,000—24,000.....	2,500
24,000—48,000.....	3,600
48,000—70,000.....	5,000
70,000—100,000.....	5,500
100,000—250,000.....	6,000
Over 250,000.....	8,000

A list of County Judges will be found on pages dealing with Counties and County Officers.

If people in a city desire a City Court, they may ballot on the proposal, and if it receives

a majority vote, a City Court is established. There are 29 City Courts in Illinois, and the Judges and Clerks are elected for a six year term.

Next in importance are the Circuit Courts. There are 17 Circuit Court Districts in Illinois, with three Judges to a district. Judges are elected for a 6 year term, and the annual salary is \$8,000.

The Appellate Courts Judges are not elected. They are appointed from the Circuit Court benches by the Judges of the Supreme Court. They do not receive any salary, and continue serving their Circuit Court terms while they are on the Appellate benches. These Judges are not appointed for any specified term.

The highest Court in the State is the Supreme Court of Illinois. The State is divided into 7 Judicial Districts, and one Supreme Court Judge is elected from each. The term is 9 years, and the salary \$15,000 annually.

Cook County, which includes Chicago, has a separate Court system. The highest Court in Cook County is known as the Superior Court. Its 27 Judges are elected for a 6 year term.

Cook County also has 20 Circuit Court Judges, elected for a 6 year term. Additionally, it has 36 Municipal Courts, which, in legal authority, are about equal to the City Courts in the smaller communities.

COURT OF CLAIMS

The Court of Claims was established by the state legislature in 1903 "to hear and determine all claims and demands . . . which the state, as a sovereign commonwealth should in equity and good conscience discharge and pay." The court consists of three judges, appointed at large from the state by

the governor for a term of four years. The salary of each judge is \$3,240 annually.
Wm. Wirt Damron, Chief Justice..... Harrisburg
George M. Fisher..... Chicago
Robert P. Eckert, Jr..... Freeport
Edward J. Barrett, Secretary of State, Ex-Officio Secretary.

ILLINOIS APPELLATE COURTS

The state is divided into four Appellate court districts and justices for these courts are appointed by the justices of the Supreme court from Circuit and Superior court judges. Each Appellate bench consists of three

judges, except that in Cook county, which forms the first district, where two branch appellate courts are organized in accordance with law.

CROPS IN ILLINOIS

Although 1936, from a standpoint of value of principal crops harvested, was the best year since 1929, crop yields per acre harvested were lower than in any recent year except 1934 and averaged 23 per cent below the 1921-20 ten-year average because of record heat and drought.

*Employees and pay roll include paid executives of corporations but not the number and compensation of proprietors of unincorporated businesses.

¹ Previously published totals for the State and for the automotive group, for 1935 and 1929, are revised to exclude service garages and other automotive service businesses whose receipts from service sales exceed their sales of merchandise. These are now included in the Census of Service Establishments.

SUMMARY OF MANUFACTURES, ILLINOIS, 1939

Source: U. S. Bureau of Census

Summary, by Industries

COAL FIRST DISCOVERED IN ILLINOIS

Source: 1941 Coal Report of the Illinois Department of Mines and Minerals

It was in what is now known as the state of Illinois that coal was first discovered in America. It was found in the 17th century somewhere between the present cities of Ottawa and Utica. Some historians credit Father Louis Hennepin, a French explorer, with the discovery of coal in America and fix the date as 1669; others credit it to Fathers

Marquette and Joliet in 1673.

The first government records of coal production in Illinois covered the years 1833 and show the amount mined that year as 6,000 tons. In 1944, the amount produced in this state was 2,763,255,173 tons. Annual average since 1882 has been 43,861,193 tons.

ILLINOIS INDEX OF FARM PRICES, 1920-1944

Source: Illinois Cooperative Crop Reporting Service

Prices used in the preparation of this index are estimates of prices paid to farmers. The 1910-14 average prices are taken as base prices since this is the most recent period of required length in which a reasonable degree of price equilibrium has existed, the report issued cooperatively by the Illinois and United States departments of agriculture says.

Prices of 21 important and representative Illinois farm products are used in calculating the index. The average cash farm income from these products is 94 per cent of the total Illinois cash farm income. Products included are corn, wheat, oats, barley, soybeans, apples, peaches, hay, horses and mules, wool, potatoes, hogs, cattle, calves, sheep, lambs, chickens, eggs, milk, butterfat and butter.

Year	All Farm Products	Food Grains	Meat Animals	Poultry and Eggs	Dairy Products	Fruits	Ratio of Prices Received to Prices Paid	Year	All Farm Products	Food Grains	Meat Animals	Poultry and Eggs	Dairy Products	Fruits	Ratio of Prices Received to Prices Paid

1915 CATTLE SLAUGHTER SETS RECORD

While cattle slaughter under federal meat inspection during 1945 set an all-time record, the total of 76,521,000 cattle, hogs and sheep handled dropped 28,330,000 head, a decline of 27 per cent from the war-period peak year of 1944.

The major factor in the production slump

was the 40 per cent shrinkage in hog marketings, the decrease of 28,172,000 head of swine being the largest change on record from one year to another. December cattle slaughter was smallest since July but hogs slaughter was largest for any month of the year 1945.

ILLINOIS TO BUILD 170 AIRPORTS

Ben Regan, chairman of the Illinois Aeronautics commission, predicted July, 16, 1945, that Illinois communities would spend \$100,000,000 for construction of 170 new airports. This forecast would bring the number of airports in the state to 250.

New construction, according to Mr. Regan, would favor the small plane owner, who is expected to provide 97 per cent of post war air traffic. Because the length of runways governs the classification of airports, the proposed aviation improvements would provide more Class 1 and 2 airports with runways of 1,800 to 3,000 feet in length.

Government classifications are: Class 1,

1,800 to 2,500 feet runways; Class 2, 2,500 to 3,000; Class 3, 3,000 to 4,500; Class 4, 4,500 to 5,500; and Class 5, 5,000 and up.

In 1945, Illinois had no Class 5 airports, but Mr. Regan said several of them would be built under the construction program.

Post war aviation would be developed with a \$3,000,000 fund provided by the state. Two hundred fifty thousand would be used to administer a new Illinois Department of Aeronautics. Local communities would be permitted under new legislation to float bond issues for construction of air sites and to co-operate in the construction of municipal aviation improvements.

Illinois Transportation and Communication

ILLINOIS SAFETY FINANCIAL RESPONSIBILITY AMENDMENTS, EFFECTIVE JAN. 1, 1946

Source: Secretary of State

The Illinois Safety Financial Responsibility law, prior to Jan. 1, 1946, affected only those drivers who had been convicted of certain serious traffic offenses and those persons who had had traffic accident judgments rendered against them.

But, beginning Jan. 1, 1946, the Illinois law, according to amendments, reaches every motorist involved in an accident causing death, personal injury or property damage in excess of \$50.00.

The amendments provide that every motorist participating in such an accident show ability to pay the damages for which he may be held responsible.

He may show this responsibility in two ways:

1. by depositing security for such accident, or
2. by providing that he was covered by insurance or proper bond.

If he does not show he can pay the damages, his operator's license and car registration are suspended until:

1. one year shall have elapsed following the date of such accident and satisfactory evidence filed showing no action for damages arising out of the accident has been instituted;
2. he has settled or paid the claims against him, or
3. until he has been found not guilty, which occurs first.

There are four major exceptions to the law, so that it does not apply to:

1. accidents involving less than \$50.00 worth of damage, or
2. to the owners of legally parked cars, nor
3. to the owners of cars used without permission, nor
4. to the operators or owners of a car involved in an accident wherein no injury or damage was caused to the person or property of any one other than such operator or owner.

Administration of the "accident responsibility" provision of the law is divided between the Department of Public Works and Buildings and the Office of the Secretary of State.

The Department of Public Works and Buildings will receive the accident reports; analyze them to determine whether and how much security is required, and certify to the Secretary of State the name of each person required to deposit security and the amount required.

The Secretary of State will notify the motorists required to deposit security; suspend driving privileges if security is not furnished; receive, or be responsible for and arrange for return of security after it has served its purpose; waive requirements of security when arrangements have been made for release of liability or settlement claims, and administer provisions for "self insurance."

The law also provides an "assigned risk" plan, whereby everyone entitled to bodily injury and public liability insurance may secure such coverage.

ILLINOIS LAWS COVERING REGISTRATION OF MOTOR VEHICLES

Applications for registration must be filed with the secretary of state by Jan. 1 of each calendar year. Fees for passenger automobiles, motor trucks and trailers are as follows:

Trailers

The license fee for trailers shall be \$5.00 with the election of either a flat weight tax or mileage weight tax as follows:

Class	Flat Weight Tax	Tax
2,000 pounds or less		\$ 1.00
2,001 to 5,000 pounds		7.00
5,001 to 10,000 pounds		20.00
10,001 to 15,000 pounds		55.00
15,001 to 20,000 pounds		85.00
20,001 to 32,000 pounds		170.00

It became unlawful after Jan. 1, 1936, to operate a vehicle carrying passengers for hire unless the vehicle is equipped with safety glass wherever glass is used.

Motor Trucks and Busses

The license fee for each truck is \$5.00. In addition, the owner must elect to pay either a flat weight tax or a mileage weight tax as follows:

Weight Tax—			—Weight tax—		
Class	Flat	Mileage*	Class	Flat	Mileage*
3,000 pounds	\$ 5	\$0.001	14,001 to 16,000 pounds	\$70	\$0.006
3,001 to 8,000 pounds	7	.002	16,001 to 20,000 pounds	105	.010
8,001 to 10,000 pounds	19	.003	20,001 to 24,000 pounds	145	.015
10,001 to 12,000 pounds	30	.004	24,001 and over	245	.020
12,001 to 14,000 pounds	45	.005			

*In the event the mileage weight tax is elected it is necessary that the owner of the vehicle file with the secretary of state a bond in the amount of two hundred dollars (\$200.00) on a form to be approved by and with surety or sureties satisfac-

tory to the secretary of state. It is also necessary that a daily record be maintained by the owner as to the number of miles operated in this state per day.

FASTEST RAILWAY TRAINS

The fastest recorded speed attained by a steam locomotive was that of a Pennsylvania special June 12, 1905, which raced 127.2 m.p.h. Although the British claimed a new record for sustained speed by a steam train when the "Coronation Scot" averaged 79 1/2 m.p.h. for 158 miles between Crewe and London June 29, 1937, the Milwaukee Road's "Hiawatha" made its test run of 141 miles between Milwaukee and New Lisbon, Wis., May 15, 1935, in 113 minutes, for an average speed of 80 m.p.h. and a top speed of 111.5 m.p.h. The "Hiawatha" covers a 68.8 mile stretch in its Chicago-Twin Cities run at an average of 87.8 m.p.h.

The Santa Fe "Super Chief" makes its regular 202.4 mile run between La Junta, Calif., and Dodge City at an average speed of 83.8 m.p.h. It is diesel-electric-powered. The British steam train speed record also

is held by the "Coronation Scot," 114 m.p.h.

Dec. 15, 1936, the seven-car Twin Zephyr of the Burlington railway broke the record between St. Paul and Chicago when it traveled the 431 miles in 5 hours, 22 minutes, an average of 80.2 m.p.h. The Zephyrs are Diesel-electric powered. There are more than 640 different train runs in the United States in which the average station-to-station speed is more than 60 m.p.h.

The Santa Fe Super Chief made the run between Los Angeles and Chicago in 36 hours 49 minutes, May 16 and 17, 1937. The actual running time was 34 hours, 55 minutes. The Super Chief averaged 60.8 m.p.h. on elapsed time and 63.9 m.p.h. actual running time. The distance is 2,228 miles, with 17 stops.

An experimental stream-line coach in Germany, driven by a propeller, has traveled as fast as 143.75 m.p.h., in 1931.

CHICAGO AND COOK COUNTY

ELECTIVE OFFICERS OF CHICAGO

(terms expire in 1947)

Mayor Edward J. Kelly
City Clerk Ludwig D. Schreiber
Treasurer Raymond P. Drymalski
Chief Clerk Edward J. Padden

ALDERMEN

(terms expire in 1947)

The City Council is composed of 50 aldermen, each alderman representing a ward in the city. The election of aldermen is non-partisan. Term, four years. Salary, \$5,000 a year.

Regular meetings of the City Council are held at 2 p. m. every Wednesday unless otherwise ordered at a regular meeting. Special meetings may be held at any time, on call of the mayor or any three or more aldermen; such call shall be in writing, duly signed, and shall be presented to the clerk, who shall proceed immediately to prepare notices of the same and shall cause them to be served on members of the council at least 24 hours prior to the day and hour set for the special meeting except for special meetings called on account of death of a member of the council or in an extreme emergency; such notices shall describe, in brief, the nature or objects of the call.

COUNCIL CHAMBERS, ROOM 201, CITY HALL

President Pro Tem. Alderman Dorsey R. Crowe

 11. Chauncey W. Reed (R.), W. Chicago.

CHICAGO CITY SEAL

The earliest record of the city seal has been traced to 1833, when Chicago was still a town. Col. T. J. V. Owen, U. S. commissioner to negotiate with the neighboring Indian tribes, and president of the town board, has been credited with authorship of the first seal, which was a primitive but faithful copy of the obverse side of the U. S. half-eagle gold coin.

Upon the incorporation of Chicago as a city in 1837, Mayor William B. Ogden and Ald. Josiah Goodhue were delegated to design an entirely new seal, which differed but slightly from the seal in its present form.

The loss of the original drawing and minor changes enacted by ordinances of 1854 and 1893 gave rise to the use of different seals by city officials. The seal was corrected in accordance with heraldic and historic accuracy March 20, 1905.

The Indian appears on the seal in recognition of his discovery of Chicago; the shield to represent the national spirit of the city; the sheaf of wheat to denote activity and plenty, and the ship as emblematic of the approach of white man's civilization and commerce. The babe lying in the silver shell is the ancient symbolism of the pearl and was to signify Chicago's future as "the gem of the lakes," a city of peace and contentment, which sentiment was further enhanced by the motto which means "City in a Garden."

CHICAGO CITY OFFICIALS**EXECUTIVE**

COOK COUNTY CRIMINAL COURT

California Ave. & 26th Street

Judges assigned to the Criminal Court for the term ending Aug. 31, 1946: Hon. Harold G. Ward (Superior); Hon. Wm. J. Lindsay (Superior) Hon. Julius H. Miner (Circuit); Hon. Leonard C. Reid (Circuit); Hon. Charles E. Byrne (Superior).

Clerk, Thomas J. Bowler.

Chief Deputy, Harry Bell.

The Term of Court is from the first Tuesday of September to and including the last day of the following August Term of Court.

COUNTY COURT

County Building, 6th Floor

Judge, Edmund K. Jarecki, D.; (1946) 4 years.

Clerk, Michael J. Flynn, D.; (1946).

Chief Deputy, Hugh C. Reilly.

CHICAGO—TRANSPORTATION CENTER OF THE WORLD

Within the Chicago industrial district are 7,726 miles of railway track and 207 freight yards, 1500 passenger trains arrive at, or depart from, Chicago daily. Twenty-two trunk line railroads, ten belt and terminal railroads and one underground railroad radiate from Chicago. Five electric lines enter the city, three of which furnish freight and package service in addition to the regular passenger service. The Chicago Switching District daily handles approximately 45,000 freight cars. Proviso Yards, the largest freight yard in the world, is located in Chicago and has a daily capacity of 22,000 freight cars. Chicago's Package Car Service was the first scientific method of routing less than carload shipments. Approximately one-tenth of all the freight transported in the United States is loaded or unloaded in the Chicago area.

Chicago handles an average of 26,000,000 tons of raw and finished goods by water. The Chicago harbor district has 90.5 miles of lake front, 52 miles of which are equipped with dock and rail facilities. It extends from Waukegan, Illinois, the most northerly of the commercial harbors, to Gary, Indiana. Thirteen steamship lines connect Chicago with other Great Lake cities and with North Atlantic ports. The barge system, consisting of 20 common, contract and private lines, connects this city with the Gulf ports and other inland waterway points. The Chicago River constitutes the inner harbor. Along the banks are located 29 miles of wharves and slips. All of these terminal facilities are privately owned. The lake shore line is controlled by The Chicago Park District.

DEPARTMENT OF SUBWAYS AND SUPERHIGHWAYS

The Department of Subways and Superhighways was created by the City Council on November 3, 1938, on recommendation of Mayor Edward J. Kelly.

The Clybourn-Division-State Street Subway, Route No. 1 of the initial system, has now been in operation for more than two years. In two years ending October 17, 1945, it carried approximately 163,000,000 passengers without a single operating accident of consequence. It pioneered in the use of fluorescent tubes for subway lighting.

The construction of the Milwaukee Ave.—Dearborn St.—Congress St. Subway, Route No. 2 of the initial system, was halted by the war in 1942, but is now being resumed.

When the initial system of subways is completed and in operation, Chicago will have 9.75 miles of 2-track subway, consisting of 4.9 miles in Route No. 1 and 3.85 miles in Route No. 2. Route No. 1 cost approximately \$29,000,000, and it is estimated that Route No. 2 will cost \$30,600,000.

The Department will start construction of the Superhighway System beginning with the West (Congress St.) Superhighway and the Northwest Superhighway in 1946. Both of these 8-lane, block-wide right-of-way, depressed type superhighways are to be completed in five years or less, and will be financed from motor fuel tax funds.

CHICAGO POSTAL STATISTICS

(Fiscal Year Ended June 30)

The United States postoffice is located at Van Buren, Canal and Harrison streets. The main entrance is on Van Buren street. Full postal facilities are also available at the old postoffice annex at Adams, Clark and Dearborn streets.

Postmaster, Ernest J. Kruegen.

Assistant Postmaster, Vincent F. Werner.

COLLECTIONS AND DELIVERIES

In the downtown district there are twenty collections of mail matter between 8 a.m. and 9:30 p.m.; in the outlying districts there are from three to nine collections. Collections are also made at the principal hotels, clubs, newspaper offices and railroad stations at 10 p.m., 12:30 a.m. and 2:40 a.m. in the district bounded by the Chicago river on the north and west, and on the south by Roosevelt road. Saturday collections in the main post-office business district are hourly up to 8 p.m., while in residential sections only three

collections are made, at 8 a.m., 2 p.m. and 8 p.m. Sunday collections throughout the city are made at 11 a.m. and 6 p.m.

Mail is delivered four times a day in the main business district; three times to the local business places and two times to the residential districts.

Special delivery mail is delivered in the central postoffice district and from nine unit stations within their respective districts between 7 a.m. and 11 p.m. Special delivery mail received in the special delivery section which can reach the point of delivery up to approximately 11 p.m. daily will be given service throughout the city. In the district bounded by Diversey avenue on the north, Halsted street on the west and on the south by Roosevelt road, there are three night deliveries made of special delivery mail between 12 p.m. and 6 a.m. to hotels, clubs, newspapers and theaters.

Total...	\$269,654,760	\$25,713,918	\$243,940,842	\$26,914,312	\$270,855,154			

¹ Assuming an ultimate 100% exchange of bonds under the general refinancing plans of the Parks, Sanitary District, County and Forest Preserve District. At the close of the 1944 fiscal year the following amounts remained unchanged: Parks, \$2,800; County, \$1,800; Forest Preserve District, \$4,900. ² See reading matter as to the manner of arriving at the figures shown in this column. ³ Due to the different method of treating the sinking fund reserve, the net debt figures in this column should not be compared with those appearing in Table I of our Bulletin No. 149. ⁴ Including unpaid bills. ⁵ Further details in reading matter. ⁶ After 1-1-45 transactions. ⁷ This amount includes: Refunding bonds of 1935, 1st, \$500,000 and Refunding bonds of 1935, 2nd, \$900,000, see reading matter. ⁸ As of December 2, 1944. ⁹ On basis of 5% constitutional limit; on basis of six-tenths of one per cent statutory limit the margin is \$28,053,072. ¹⁰ Technically, the Park District has \$1,359,770 bonds authorized but unsold. However, the margin is (\$1,283,876) of the obligations which these bonds were authorized to cover, has been held by the courts not to be a debt. In reality, this authorization is dead. ¹¹ The five per cent constitutional debt limitation applies to the total indebtedness of the district. The Legislature has established a statutory debt limitation of one and one-half per cent on new bonds issued by the Chicago Park District, which limits total issues (based on 1944 valuations) to \$73,299,285. The Park District has issued \$11,000,000 in new bonds, which, after making allowance for sinking fund credit, leaves a present statutory debt margin of \$64,690,480.

DROWNING FATALITIES

Beginning in May an average of 1,000 persons lose their lives each month through drowning in the United States, the National Safety council says. This monthly average continues through August.

Collins, Legal Investigator; Abraham Feinberg, Legal Investigator; Charles D. Dall, Secretary of Court Division.

HIGH SCHOOLS IN COOK COUNTY

In the following list the name of the High School is followed by the number of the District, and the name of the Principal.

Argo Community, Argo, Illinois, 217, Charles E. Wingo.

Arlington Heights Township, Euclid Ave., Arlington Hts., 214, M. F. Egendorf.

Barrington District, 310 Hough St., Barrington, 4, F. C. Thomas.

Bloom Township, Chicago Rd., Chicago Hts., 206, Raymond Meade.

Blue Island Community, 12915 S. Maple Ave., Bl. Is., 218, H. L. Richards.

Evanston Township, Dodge Ave. and Church St., Evanston, 202, F. L. Bacon.

Lemont Township, Porter St., Lemont, Virgil P. Puzzo.

Leyden Community, Franklin Park, Ill., 212, H. L. Ylvisaker.

Lyons Township, Brainerd Ave., La Grange, 204, George Olsen.

Maine Township, Dempster and Potter Rds., Des Pl. or Park Ridge, 207, Frank Holmes.

New Trier Township, 385 Winnetka Ave.,

Winnetka, 203, Matthew Gaffney.

Niles Township Community, Lincoln Ave., Skokie, 219, A. L. Biehn.

Northbrook, Kiest Ave., Northbrook, 28, Norman E. Watson.

Oak Park and River Forest Township, Ontario and East Aves., Oak Park, 200, Eugene Youngert.

Orland Park Community, 143rd St. and Southwest Highway, Orland Park, 221, T. Erwin Kelly.

Palatine Township, 155 E. Wood St., Palatine, 211, Gerald A. McElroy.

Proviso Township, 1st Ave. and Madison St., Maywood, 209, E. R. Sifert.

Riverside-Brookfield Township, Ridgewood Ave. and Golf Rd., Riverside, 208, I. E. Haebich.

J. Sterling Morton Township, 25th St. and Austin Blvd., Cicero, 201, W. P. McLean.

Thornton Frac. Township, Pulaski Rd. and Superior, Calumet City, 215, A. V. Lockhart.

Thornton Township, 151st and Broadway, Harvey, 205, Wm. E. McVey.

¹ Including capital stock.

² Starting with 1927, assessed and full value are required by law to be the same. From 1919 through 1926, assessed value was by law one-half of full value. Prior to 1919 assessed value was by law one-third of full value. For the period 1928-1942, inclusive, in Cook County, the Assessor's full value, "equalized" at 37% thereof, was used as "full assessed value." For 1943 and 1944 the assessed value represents the Assessor's full value not reduced by the 37% equalization factor.

GROSS ¹ BONDED DEBT, SIX ² MAJOR CHICAGO GOVERNMENTS

Quoted by permission of the Civic Federation; Bulletin No. 230, Twelfth Annual Study of Debts—Taxes—Assessments.

Fiscal Year	Total Gross Bonded Debt	City of Chicago	Board of Education	Parks ³	Cook County	Forest Preserve District	Sanitary District
1930...	\$396,556,600	\$119,361,100	\$12,500,000	\$101,871,000	\$33,790,000	\$16,200,000	\$112,834,500

¹ General Obligation Bonds only:

² The bonded debt of the State of Illinois for the past four years was:

	Jan. 1, 1942	Jan. 1, 1943	Jan. 1, 1944	Jan. 1, 1945
Called Stock and Bonds.....	\$ 17,500	\$ 17,500	\$.....	\$.....
State Highway Bonds.....	111,041,000	106,070,000	101,048,000	96,045,000
Soldiers' Compensation Bonds.....	9,951,000	6,234,000	1,978,000	49,200
Emergency Relief Bonds.....	28,452,000	26,491,000	24,800,000	19,722,000
Total Debt.....	\$149,461,500	\$138,812,500	\$127,826,600	\$115,816,200

The State Highway Bonds are payable from Motor Vehicle Tax Levies and would affect property taxes (or Sales Tax revenue) only in the event that the first mentioned source proved insufficient. The Emergency Relief Fund item is originally payable from "Gas Tax" income, and the Soldiers' Compensation Bonds are at present paid from the proceeds of the State's Sales Tax.

³ Park totals shown do not include matured old Lincoln Park Bonds held in other funds to cover advances as follows: 1930, \$314,000; 1931, \$739,000; 1932, \$1,871,000; 1933, \$1,912,000.

⁴ Reflects more than one year's reduction. Practice adopted of indicating January 1st redemptions on previous year's books.

1945 TAX RATE IS \$4.23

Chicago's 1945 tax rate of \$4.23 on the \$100 of assessed valuation, is the largest in the city's history. It is 26 cents above the 1944 rate, which also was a record.

The rate will be applied to the total of assessments in the city, \$4,732,228,415, and is expected to bring in taxes of \$200,173,261. The city tax for 1944 as extended was \$193,998,776.

Douglas Sutherland, executive director of the Civic federation, said about half the increase was due to bager expense of the six major taxing bodies in the city and the other half to lowering of valuations by 154 millions.

The levies by the different bodies were: County, 40 cents; forest preserve, 5 cents; sanitary district, 34 cents; city, \$1.55; city schools, \$1.45, and parks, 44 cents.

County Clerk Flynn said bills would be mailed out before April 1 and that the first penalty date—for all personal property tax and half of real estate—would be May 1. Taxpayers may ask a reduction of their assessed valuation from the county board of appeals in the period 30 days before and 30 days after the penalty day.

Alaska Was Good Investment

Since Alaska was purchased from Russia it has produced minerals valued at 100 times the purchase price of \$7,200,000. Mineral output in 1936 was valued at \$23,347,000 as

compared with \$18,312,000 in 1935. Recently the production of tin has appeared promising. It is shipped to other countries for refining.

CHICAGO HOTELS

There are 1385 hotels within the corporate limits of Chicago, containing about 135,000 rooms. The following is a list of those located in the downtown district of Chicago with address and phone number: Atlantic, 316 S. Clark, Wabash 2646; Bismarck, 171 W. Randolph, Central 0123; Blackstone, Michigan at Balbo, Harrison 4300; Brevoort, 120 W. Madison, Franklin 2363; Chicagoan, 67 W. Madison, Andover 4000; Congress, 500 S. Michigan, Harrison 3800; Harrison, 57 E. Harrison, Harrison 8000; La Salle, Madison and La Salle, Franklin 0700; Morrison, 79 W. Madison, Franklin, 9600; Palmer House, 15 E. Monroe, Randolph 7500; Planters, 19 N. Clark, Randolph 4800; Sherman, 106 W. Randolph, Franklin 2120; Stevens, 720 S. Michigan, Wabash 4400; Washington, 167 W. Washington, Dearborn 2100.

Y.M.C.A. OF CHICAGO

The Young Men's Christian Association of Chicago, with headquarters at 19 South La Salle St., Chicago, Illinois is the largest city association of YMCA's in the world, with a membership in excess of 48,000. There are 24 departments of the YMCA in Chicago proper and additional departments in Evanston and Oak Park. The Chicago association was founded in 1858. The general secretary is Mr. Frank A. Hathaway and the president is Mr. James F. Oates, Jr.

Through its many buildings, including a 2200 room hotel in Chicago, the YMCA maintains a varied program of community service, with religious, health, educational and social activities for all members of the family. In most departments in Chicago there are special facilities for boys, girls, and women as well as young men.

Y. W. C. A.

With a participating membership of 3,000 and upwards of 40,000 women and girls each year enrolled in its activities and using its services, the Young Women's Christian Association of Chicago operates for the stated purpose of building "a fellowship of women and girls" devoted to the realization of ideals of Christian living.

The Association maintains residences, activity centers, clubs, classes and summer camps. No membership fees are charged, and class fees and club dues are nominal. Miss Lilace Reid Barnes is the president and Miss Rosalee Venable is the executive secretary. The Metropolitan Executive Office is located at 203 N. Wabash Ave., telephone Franklin 0760.

CITY COUNCIL BUDGET
\$203,269,529 FOR 1946

The City Council, Jan. 8 approved a 1946 budget of \$203,269,529, highest in the city's history. The new budget granted 23,000 city employees pay increases of at least 7 per cent. Eight thousand employees, members of unions, got increases up to 8.5 per cent. Part of the increase in the budget represented an item of \$195,000 to clean the exterior of the city hall and two funds, to be made up by the sale of water works certificates, for improving water pumping facilities. The corporate purposes (operating) fund for 1946 is \$69,747,488. The water fund is \$23,162,291; bond fund, \$32,868,114; motor fuel tax fund, \$21,900,000; and vehicle fund, \$6,179,011. Seven more smoke observers, at \$2,472 a year were added. An appropriation of \$382,500 to improve Rainbow beach between 75th and 79th streets was approved.

CHICAGO TRANSIT
AUTHORITY

The Chicago Transit Authority, created to acquire and operate local transit lines in 85 communities in Cook County, is now seeking to purchase, modernize and consolidate into a single operating system the Chicago surface lines, the Chicago Rapid Transit Co., and the Chicago Motor Coach Company.

In addition to the purchase and consolidation of the 3 local transit companies, The Chicago Transit Board proposes a \$125,000,000 modernization program, which includes the purchase of the equivalent of 1,000 all-metal subway-elevated cars, 3,000 new buses, 1,000 new streetcars, and a modern signal and safety equipment. It also plans to establish 220 miles of bus extensions, 600 miles of bus substitutions for streetcar service, and 175 miles of new express bus lines.

WOMEN'S CHRISTIAN TEMPERANCE UNION

The Women's Christian Temperance Union is a national non-profit, non-political, educational, undenominational, Christian organization of women banded together for the protection of the home through the promotion of total abstinence, purity and peace.

The national officers are: President, Mrs. D. Leigh Colvin, 1730 Chicago Avenue, Evanston, Illinois; Vice President, Miss Mary B. Ervin, Columbus, Ohio; Corresponding Secretary, Miss Lily Grace Matheson, Evanston, Illinois; Treasurer, Mrs. Margaret C. Munns, Evanston, Illinois; Recording Secretary, Mrs. Glenn G. Hays, Ransom, Kansas.

BUREAU OF RIVERS AND HARBORS

The Bureau of Rivers and Harbors operates the movable bridges owned by the City of Chicago over the Chicago and Calumet rivers, 54 in number. During the year 1944 these bridges were opened a total of 59,888 times; average time for each opening 4.21 minutes (1945 figures approximately the same).

The Bureau also has jurisdiction of Navy Pier, and every navigable water course within the city limits (approximately 42 miles of rivers, over 20 miles of Lake Front, and Lake

Calumet).

Navy Pier, extending 3,000 feet into Lake Michigan at the foot of Grand avenue, is 292 feet wide. Since 1942 the structure has been utilized exclusively by the United States Navy for Technical Air Training and Radar School purposes. It is anticipated that the Navy will release the Pier back to the City by January 1, 1947.

Principal officials of the Bureau: William J. Lynch, Harbor Master; Martin W. Oettershagen, Harbor Engineer.

CATHOLIC YOUTH ORGANIZATION

The Catholic Youth Organization was founded in 1930 to aid underprivileged young people in the Chicago area. In addition to Chicago, hundreds of other cities in the United States, Canada, Hawaii and South America now enjoy the social benefits of the C.Y.O. Bishop Bernard J. Sheil was its founder and has been its guiding spirit.

The Catholic Youth Organization has offered opportunities of education and recreation to thousands of boys and girls of all races and creeds. It helps sponsor basketball and baseball leagues as well as a number of social events. The C.Y.O. Central Office offers the advisory assistance of its profes-

sional staff to the parishes. The C.Y.O. athletic program includes amateur boxing tournaments, and other sports events in track, basketball, ice skating, wrestling, volley ball and softball.

The Sheil School occupies a prominent place in the Catholic Youth Organization. Founded in 1943, by Bishop Bernard J. Sheil, the school offers free courses in social education and is open to everyone regardless of race, creed, color or scholastic standing. Classes are conducted by a volunteer faculty drawn largely from the colleges and universities in the Chicago area.

CITY COUNCIL BUDGET
\$203,269,529 FOR 1946

The City Council, Jan. 8 approved a 1946 budget of \$203,269,529, highest in the city's history. The new budget granted 23,000 city employees pay increases of at least 7 per cent. Eight thousand employees, members of unions, got increases up to 8.5 per cent. Part of the increase in the budget represented an item of \$195,000 to clean the exterior of the city hall and two funds, to be made up by the sale of water works certificates, for improving water pumping facilities. The corporate purposes (operating) fund for 1946 is \$69,747,488. The water fund is \$23,162,291; bond fund, \$32,868,114; motor fuel tax fund, \$21,900,000; and vehicle fund, \$6,179,011. Seven more smoke observers, at \$2,472 a year were added. An appropriation of \$382,500 to improve Rainbow beach between 75th and 79th streets was approved.

CHICAGO TRANSIT
AUTHORITY

The Chicago Transit Authority, created to acquire and operate local transit lines in 85 communities in Cook County, is now seeking to purchase, modernize and consolidate into a single operating system the Chicago surface lines, the Chicago Rapid Transit Co., and the Chicago Motor Coach Company.

In addition to the purchase and consolidation of the 3 local transit companies, The Chicago Transit Board proposes a \$125,000,000 modernization program, which includes the purchase of the equivalent of 1,000 all-metal subway-elevated cars, 3,000 new buses, 1,000 new streetcars, and a modern signal and safety equipment. It also plans to establish 220 miles of bus extensions, 600 miles of bus substitutions for streetcar service, and 175 miles of new express bus lines.

WOMEN'S CHRISTIAN TEMPERANCE UNION

The Women's Christian Temperance Union is a national non-profit, non-political, educational, undenominational, Christian organization of women banded together for the protection of the home through the promotion of total abstinence, purity and peace.

The national officers are: President, Mrs. D. Leigh Colvin, 1730 Chicago Avenue, Evanston, Illinois; Vice President, Miss Mary B. Ervin, Columbus, Ohio; Corresponding Secretary, Miss Lily Grace Matheson, Evanston, Illinois; Treasurer, Mrs. Margaret C. Munns, Evanston, Illinois; Recording Secretary, Mrs. Glenn G. Hays, Ransom, Kansas.

BUREAU OF RIVERS AND HARBORS

The Bureau of Rivers and Harbors operates the movable bridges owned by the City of Chicago over the Chicago and Calumet rivers, 54 in number. During the year 1944 these bridges were opened a total of 59,888 times; average time for each opening 4.21 minutes (1945 figures approximately the same).

The Bureau also has jurisdiction of Navy Pier, and every navigable water course within the city limits (approximately 42 miles of rivers, over 20 miles of Lake Front, and Lake

Calumet).

Navy Pier, extending 3,000 feet into Lake Michigan at the foot of Grand avenue, is 292 feet wide. Since 1942 the structure has been utilized exclusively by the United States Navy for Technical Air Training and Radar School purposes. It is anticipated that the Navy will release the Pier back to the City by January 1, 1947.

Principal officials of the Bureau: William J. Lynch, Harbor Master; Martin W. Oettershagen, Harbor Engineer.

CATHOLIC YOUTH ORGANIZATION

The Catholic Youth Organization was founded in 1930 to aid underprivileged young people in the Chicago area. In addition to Chicago, hundreds of other cities in the United States, Canada, Hawaii and South America now enjoy the social benefits of the C.Y.O. Bishop Bernard J. Sheil was its founder and has been its guiding spirit.

The Catholic Youth Organization has offered opportunities of education and recreation to thousands of boys and girls of all races and creeds. It helps sponsor basketball and baseball leagues as well as a number of social events. The C.Y.O. Central Office offers the advisory assistance of its profes-

sional staff to the parishes. The C.Y.O. athletic program includes amateur boxing tournaments, and other sports events in track, basketball, ice skating, wrestling, volleyball and softball.

The Sheil School occupies a prominent place in the Catholic Youth Organization. Founded in 1943, by Bishop Bernard J. Sheil, the school offers free courses in social education and is open to everyone regardless of race, creed, color or scholastic standing. Classes are conducted by a volunteer faculty drawn largely from the colleges and universities in the Chicago area.

CHICAGO WATER TOWER

The first attempt to establish a water system in Chicago was made in 1834, when the board of trustees of the town of Chicago paid \$95 to have a well dug at Cass and Michigan streets, now known as Wabash avenue and Hubbard street. In 1842 a 24-horsepower engine was installed by a private concern at the foot of Lake street. Water was pumped from the lake through mains of hollowed cedar logs. In 1851 the system was

taken over by the city after having been an issue of the mayoralty campaign. Two years later pumping works, considered a marvel of their time, were housed in a brick building at Chicago and Michigan avenues. The engines were operated until 1901, but the brick structure was replaced in 1867 by the 150-foot stone tower and buildings now standing on the site, the only municipal buildings to withstand the Chicago fire in 1871.

COOK COUNTY PSYCHOPATHIC HOSPITAL

Source: President's Annual Message, Cook County Board of Commissioners

The Cook County Psychopathic Hospital serves as a place for observation for patients about whom some question has arisen with regard to mental health. Formerly it was a detention hospital, an off-shoot of the County Jail, where patients were held pending a court inquiry into their sanity.

During the first 10 months of 1945, 2632 Female and 3061 Male patients, a total of 5693, entered the hospital. This is an increase of approximately 500 patients over 1944. For the period extending from December 1, 1944 to September 30, 1945 total admissions for bed patients who had been in the various Armed Services was 513. Of these 201 Males were Veterans of World War I and

there were 301 Male and 11 Female Veterans of World War II.

At present the Consulting Staff consists of Dr. C. A. Neymann, Chief of Staff; Dr. Francis J. Gerty; Dr. Ralph Hamill; Dr. Charles B. Congdon; Dr. David Slight and Dr. Franz Alexander.

Dr. John J. Madden is the County Physician and Superintendent. Dr. Morris Braude is in charge of the male service and Dr. Bernard Skorodin is in charge of the female service. Resident staff now consists of three physicians, Dr. Richard A. Rogers, Dr. Walter J. Grant and Dr. Robert A. Esser. The Neuropathological laboratory is under the direction of Dr. Joseph A. Luhan.

COAL AS A PRODUCER OF ENERGY

Coal in various forms of energy is used the world over, the United States being the largest user. The industrial use of coal is only of recent origin in the history of civilization. The birth of the United States marks the beginning. Prior to 1900, in the United States, the various by-products produced when the coal roasts in an oven were ignored and allowed to be destroyed.

CHICAGO SANITARY DISTRICT

Offices—6th and 7th floors, 910 S. Michigan Avenue.

President—James M. Whalen, term expires, 1946.

Board of Trustees—Terms expire in 1946: Joseph I. Baran, James J. Polodna, James M. Whalen; terms expire, 1948: Paul V. Colianni, Neal T. Kelley, A. F. Maciejewski; terms expire, 1950: J. L. Friedman, John J. Touhy, John A. Szumnarski (deceased, office to be filled in 1946 elections)

Chief Engineer—William H. Trinkaus.

Attorney—Ernst Buehler.

Clerk—James J. Sullivan.

Treasurer—Frank O. Birney.

Dimensions of Main Channel

Length, main and power channel, 32.25 miles.

Length of Chicago river, lake to beginning of main channel at Damen avenue, 6 miles.

Minimum depth of water in main channel, 22 feet.

Present capacity of canal, 600,000 cubic feet per minute.

Present (1944) flow, 188,000 cubic feet per minute.

Current in earth sections, 7/16 mile per hour.

Current in rock sections, 1/2 mile per hour.

Total amount of excavation, 44,005,647 cubic yards.

Area and Population

The original Sanitary District in 1889 extended only from Devon avenue on the north to 87th street on the south, from Lake Michigan on the east to Harlem avenue on the west, having an area of 185 square miles and a population of 1,140,000. Subsequent annexations, all by act of the state legislature, have increased this in 1903 by 173.10 square miles, in 1923 by 28.10 square miles, in 1917 by 1.94 square miles, in 1919 by 7.37 square miles, in 1921 by 41.88 square miles, and in 1927 by 4.96 square miles. The sanitary district extends from the north

line of Cook County south to 159th street and from the Indiana state line west to the east end of DuPage county. Its area is 442.85 miles, including all of Chicago and 62 other incorporated cities and villages. The average flow of sewage treatment per day in 1945 was 1044 million gallons; this is equivalent to a lake one mile square and 6.2 feet deep.

FOREST PRESERVE DISTRICT OF COOK COUNTY

Source: 1945 Report, Board of Forest Preserve Commissioners

During the 1945 spring planting season, 20,180 trees and shrubs were planted in the Cook County Forest Preserve District. About two-thirds were planted to reforest open fields and the balance were used in erosion control, roadside strip planting, and landscape work.

Seedling stock of two to four years in age, produced in the Salt Creek Nursery were used in this planting. The species included Maple, Ash, Sycamore, Oak (Burr, White and Red), Willow, Elm, Poplar, Dogwood and Coral-berry.

Weather was favorable for tree growth. As a result of ample moisture during the growing season abundant foliage and remarkably long terminal twig growth were produced. Seedlings planted not only this year but also those planted in reforestation projects several years ago have responded particularly well to the good growing conditions.

The area at River road and North avenue planted in 1938 with 12 inch seedlings as a Demonstration Reforestation project, began to assume the appearance and character of a sturdy young natural forest of mixed hardwoods. Many of the trees exceeded 8 feet in height. The same was true of reforested tracts at 147th street and Harlem avenue; Dundee road west of Waukegan road; East River road and Higgins road and other areas planted several years ago throughout the Forest Preserve District.

All trees and shrubs planted in the Forest Preserve District are produced from seed collected locally and propagated in the Salt Creek Nursery. Only native stock is grown and it is held at the Nursery only long enough to assure adequate root development to withstand the shock of transplanting. This means that a given tree or shrub is usually under four years of age and, varying with the species, three feet or less in height at the time of transplanting. Stock of this age and size has the best chance of survival in transplanting and can be handled with greater economy.

This year 8,000 gallons of diluted chemical solution were used in spraying for weed control. It is anticipated that at least double this amount will be necessary annually to afford adequate control in roads and parking areas throughout the season.

CHICAGO SPORTS ASSOCIATION

The Chicago Sports Association, Inc. is a Civic body, sponsored by the City of Chicago, created in 1943 by Mayor Edward J. Kelly.

One of the important functions of the Association is the operation of a series of Coaching Schools. Coaching staffs are leading amateur and professional coaches and top flight players who serve without compensation. All equipment needed for the operation of the schools is furnished by the Chicago Sports Association.

Outstanding pupils are selected and formed into teams and these are outfitted by Civic and sports leaders, after which they

play a championship schedule, for Civic awards presented by the Chicago Sports Association. Coaching schools are conducted in Baseball, Basketball, Softball, Boxing, Wrestling, Soccer, Ice Skating, Skiing, and Cycling.

Over 100,000 boys and girls have attended the coaching schools and more than 200,000 have taken part in competition. Officers of the Chicago Sports Association are Charles W. Bidwill, President, Thomas J. Bowler, Treasurer and Harry Berz, Executive Secretary. The address is R-610-134 N. La Salle Street, Chicago 2, Illinois.

THE SHEDD AQUARIUM

The John G. Shedd Aquarium exhibits a large collection of live fish and other aquatic animals from every continent, averaging 10,000 specimens. Large and small, beautiful and ugly, rare and familiar fishes are among the 350 kinds of fresh and salt water animals to be seen in the largest aquarium in the world. Mammals, reptiles and invertebrates are also represented. There are 132 large exhibition tanks and 65 smaller tanks which contain small tropical fish. The Aquarium's own collecting crew travels all over the

United States as well as to Hawaii and the Bahama Islands, to secure new specimens.

Over \$3,000,000 was given by the late John G. Shedd, of Marshall Field & Co. to build this beautiful white marble aquarium. It is open every day from 10 until 5. Free days are Thursday, Saturday and Sunday. Other days the admission is 25 cents plus 5 cents Federal tax to adults; children 16 or under are free at all times. It is located at Roosevelt Road and Lake Michigan, and Walter H. Chute is the Director.

NORGE SKI CLUB 1946 WINNERS

CLASS A

Won by Merrill Barber, Brattleboro, Vt., leaps of 169 and 176 feet, 155.1 points.

CLASS B

Won by Joseph Perrault, Ishpeming, Mich., with leaps of 158 and 164 feet, 142.8 points.

CLASS C

Won by Elmswood Ramfjord, Duluth, Minn., with leaps of 143 and 162 feet, 128.7 points.

SENIOR CLASS

Won by Yngvar Arnesen, Wisconsin Rapids, Wis., with leaps of 138 and 150 feet, 130.8 points.

GOLDEN GLOVES CHAMPIONS, 1945

112 pound class, Jackie Boyd; 118 pound, Bob Jarvis; 126 pound, Virgil Franklin; 135 pound, Bernard Paige; 147 pound, Gilbert

Garcia; 160 pound, John Garcia; 175 pound, Adolfo Quizano; Heavyweight, Luke Baylark.

GOLDEN GLOVES INTER-CITY CHAMPIONS, 1945

SELECTIVE SERVICE SYSTEM ILLINOIS STATE HEADQUARTERS

Local Selective Service Boards: in Illinois, 361; in Cook County, 180; in Chicago, 151; Downstate, 181.

Selective Service Appeal Boards (individual groups): in Illinois, 20; in Cook County, 12; Downstate, 8.

Approximate number of registrants 18 through 45 years of age: 1,915,000.

Approximate number of Illinois residents who entered the armed forces of the United States from Sept. 16, 1940, to Jan. 1, 1946: Men, 892,000; Women, 18,000.

CHICAGO PUBLIC UTILITIES

Commonwealth Edison Company is a public utility engaged, with affiliated companies, in the production, purchase, transmission, distribution and sale of electricity and gas. This group of companies supplies at least one of these utility services to a large portion of some 11,000 square miles extending across northern Illinois from Lake Michigan on the east to the Mississippi River on the west. The population of this territory is about 5,000,000.

Commonwealth Edison Company's main office is at 72 West Adams Street, Chicago.

Public Service Company of Northern Illi-

nois, also with its main office at 72 West Adams Street, Chicago, gives electric and gas service to most of the Illinois area surrounding Chicago from Waukegan to Kankakee.

Western United Gas and Electric Company, with headquarters at 50 Fox Street, Aurora, Illinois, serves the territory of the Fox River Valley.

Illinois Northern Utilities Company, with its main office at 421 West First Street, Dixon, Illinois, supplies electric and gas services to a large territory adjacent to the Rock River Valley.

¹ Does not include attendance at north and south lagoons and Waveland area in Lincoln Park, and at Washington Park and the Midway Plaisance skating areas.

² Does not include attendance at courts in areas that are not supervised by members of the recreation staff.

³ A detailed table of attendance at each of the events held in Soldier Field is shown in the Report of the Division of Special Services.

THE ART INSTITUTE OF CHICAGO

The Art Institute of Chicago has the reputation of being one of the most important art museums in the United States. It was incorporated on May 24, 1879. An average of more than 913,000 persons in the last fifty years have attended its exhibitions annually. The permanent collections of The Art Institute of Chicago provide the visitor with a survey of the great historical art movements dating from early Grecian times to the present day. The Art Institute is especially famous throughout the world for its paintings, of which there are some 1,200 in the permanent collection, representing all the principal historical art movements in Europe from the 13th century onward. The French Collection of the 19th and 20th centuries is the greatest in the world. The galleries devoted to Renoir, Monet, Manet, Van Gogh, Pissarro, and other great painters of the Impressionist School, is of such exceptional importance that students and visitors even come from France to study these exhibitions.

Contemporary paintings and sculpture are shown in several important annual exhibitions such as the Exhibition of American Paintings and Sculpture held in October; the Exhibition of Artists of Chicago and Vicinity held in March, and The International Exhibition of Watercolors held in April.

The Department of Prints and Drawings has more than 50,000 original etchings, engravings and lithographs which are shown in various exhibitions held throughout the year

in the Print Department Galleries. The public may view works from this remarkable collection at any time in the Print Study Room.

The Decorative Arts Department illustrates arts of the church, castle and home, exhibiting styles in furniture, interior decoration, textiles, and comprehensive and extensive collections in the minor arts. The spirit of the period is preserved in its original setting by means of period rooms such as the Dutch Frisian Room from Holland, the Jacobean Room from Wales, the French Regency Room, etc.

The ceramic section is well represented by pottery, porcelain and glass of various countries and techniques. Textiles and rugs of many styles and designs complete the extensive survey offered by this department.

The vast Oriental Collections comprise paintings, ceramics, sculpture in bronze and stone, of all the important historical periods of Chinese and Japanese art.

The Ryerson Art Library contains 40,000 volumes, and the Burnham Library of Architecture has more than 10,000 volumes.

The Art Institute has more than 14,000 members, and is open from 9:00 A.M. to 5:00 P.M. on week days, and on Sunday and all legal holidays from 12:00 noon to 5:00 P.M. Free days are Wednesday, Saturday and Sunday, and there is a charge of 30 cents on all other days. Mr. Daniel Catton Rich is Director of the Institute.

THE CHICAGO ACADEMY OF SCIENCES

The Academy was founded in 1857, and maintains a Museum of Natural History in Lincoln Park, Clark Street and Ogden Avenue. It presents outstanding exhibits of natural history pertaining to the Chicago Area; large habitat groups of animals, displays of minerals, fossils, plants, and insects, birds of Chicago and vicinity, and other interesting and informative subjects. Free public lectures on natural history, travel and exploration are offered on Sundays at 3:00 P.M. from November through February. A public read-

ing room is open daily from 2:00 to 5:00 P.M. A scientific library and systematic collections of birds, mammals, amphibian, reptiles, and insects are available to advanced students. The Atwood Celestial Sphere, a unique device for demonstrating the stars and constellations visible in the latitude of Chicago is part of the Museum. Museum hours are 9:00 to 5:00 on week days and 1:00 to 5:00 on Sundays and holidays, and admission is free at all times. H. K. Gloyd is the director.

THE CHICAGO HISTORICAL SOCIETY

The Chicago Historical Society portrays the story of American history through a chronological arrangement of thirty-eight period rooms, nine of which are devoted to the growth of Chicago. Colorful dioramas also amplify this material. The American history rooms picture the drama of the adventurous Spanish and French settlers exploring a new continent, life in Colonial days, the expansion to the west and the wars which have played so important a part in America's growth. The Lincoln collection, especially famous, is highlighted by a replica of the Lincoln living room in Springfield,

Illinois, furnished with the original pieces. Also exhibited is the bed on which the Great Emancipator died.

The Reference Library's 83,000 volumes and 100,000 manuscripts cover the entire field of American history with emphasis on Chicago, Illinois, and the Old Northwest. The Society is located in Lincoln Park at Clark Street and North Avenue. Museum hours are from 9:30 to 4:30 week days, and 12:30 to 5:30 on Sundays. It is free except on Sundays when a charge of 25 cents is made for adults.

THE MUSEUM OF SCIENCE AND HISTORY

The Museum houses thousands of operating exhibits which demonstrate the basic, everyday principles of the physical world and how they have been applied in industry. The Museum is divided into nine exhibit sections: Physics, Chemistry, Fuels and Metals, Power, Transportation, Medical Sciences, Engineering Construction, and Graphic Arts. Visitors are invited to join free tours of these sections conducted at frequent intervals every day. Among the most spectacular of the exhibits are an op-

erating coal mine and foundry, and a surge generator, exploding its charge of a million volts. In the coal mine may be seen all the typical mine operations. In the foundry molten metal is poured at regular intervals.

The Museum is open every day except Christmas and there is never an admission charge. During the summer months, the hours are from 9:30 A.M. to 5:30 P.M., and during the winter, the Museum closes at 4:00 P.M. on weekdays.

THE CHICAGO NATURAL HISTORY MUSEUM

(By an official)

The Chicago Natural History Museum, formerly the Field Museum of Natural History, divides its exhibits and collections into four departments—Anthropology, Botany, Geology and Zoology. These, in turn, are separated into subdivisions, archaeology, ethnology, plant economics, paleobotany, meteoritics, mineralogy, paleontology, mammalogy, ornithology, ichthyology, herpetology, and others. The museum maintains a library of more than 130,000 volumes.

Possibly the most famous exhibit in the museum is that in the Hall of Man. It is the series of sculptures in bronze and stone, done by Malvina Hoffman, and called the Races of Mankind. The figures represent types of all principal living peoples in all parts of the world. Near this exhibit is located the Hall of the Stone Age in which are located life-size statues of prehistoric man from the Chellean period to the dawn of history. The Anthropology Department also has large archaeological and ethnological collections on the North Central and South American Indians, and the peoples of ancient Egypt, Babylonia, Etruria, Rome, China, Tibet, other parts of Asia, Africa, the islands of the South Pacific.

The N. W. Harris Public School Extension is a separate department of the museum which circulates more than 1,200 traveling exhibits among the schools, and the James Nelson and Anna Louise Raymond Foundation for Public School and Children's Lectures, also a separate department and likewise separately endowed, provides lectures,

motion pictures, guide-tours and other services supplementary to the educational work of schools.

The Hall of Babylonian Archaeology contains relics of the ancient city of Kish, in what is now Iraq.

Five large halls are given over to botanical exhibits.

In the Hall of Plant Life is found a display of characteristic forms of plant life, from the lowest algae and bacteria, which are represented as they would be seen through a microscope, to the highest forms reproduced in lifelike detail. Two halls are devoted to plant economics—food plants, palms, and plant materials used in industry—and two to woods, North American and foreign.

Exhibits of the Geology Department are classified in two groups, one of which illustrates the scientific, and the other the economic and industrial relations of the earth's mineral products. Here is found also the Hall of Paleontology which has the most complete collection of meteorites in the world, as well as an important collection of fossil skeletons of prehistoric animals.

In the Department of Zoology is a classified series where each important animal can be found in its proper place. Special habitat groups show the animals in their proper surroundings. Five halls are given to this type of exhibit and others are in preparation. The largest is the Carl E. Akeley Memorial Hall, devoted to African game animals and containing the chief taxidermic works of Mr. Akeley.

THE ORIENTAL INSTITUTE

With its representative collection of exhibits from Egypt, Syria, Palestine, Iraq, Turkey, and Iran, the Oriental Institute at the University of Chicago is regarded as one of the largest archeological headquarters in the world. Among the outstanding exhibits are a colossal portrait statue in red quartzite of Tutenkhamon, dating from about 1350 B.C.; and the great Winged Bull of Assyria,

which is carved from a single block of stone, weighs forty tons, and stands over sixteen feet high. The museum also contains sculpture, jewelry, pottery, and other tangible records of the development of human culture from as early as the third millennium B.C. The Oriental Institute is located at 58th street and University Avenue, and admission is free at all times.

THE CHICAGO PARK DISTRICT

Chicago's first park was located at Michigan Avenue, extending from Randolph Street to Washington Street, where the Chicago Public Library now stands. It was known as "Dearborn Park" and was established by the City Council in 1839. By 1930 there were twenty-two separate park districts in Chicago and they were consolidated into one Chicago park district by an act of the Illinois legislature on May 1, 1934.

The Chicago Park District is independent of the municipal government of Chicago, except for the power of appointment of the Commissioners, which is vested in the Mayor, with the approval of the City Council.

The Chicago Park District is governed by five commissioners, appointed for overlapping terms of five years each. They serve without compensation.

THE ADLER PLANETARIUM AND ASTRONOMICAL MUSEUM

The Museum contains the finest collection of antique instruments in the world, armillae, astrolabes, globes, sundials, telescopes, as well as exhibits of modern astronomy; and many large illuminated photographs of the heavens.

The Astronomical Museum is open to visitors from 10 A.M. to 5 P.M. on Tuesday, Wednesday, Thursday, Friday, and Saturday; on Sunday from 2 to 5 P.M. Lecture demonstrations with the planetarium instrument, are scheduled at 2:30 and 3:30 P.M.

on Sundays; at 11 A.M. and 3 P.M. other days, except Mondays, when the building is closed.

Seated within the central, circular hall, one sees an unbelievably realistic portrayal of the sky, in its majesty and mystery, with all the changes that may be seen in it as time passes, due to the Earth's motions, planetary motions and those of the Moon, with attendant changing phases and eclipses. Each month a different chapter of this great Drama of the Heavens is presented.

CHICAGO PUBLIC LIBRARY

Board of Directors: President, Joseph B. Fleming; Preston Bradley; Mrs. M. L. Purvin; Jacob Best; Joseph D. Bibb; William A. Lee; Anthony J. Mentone; Anton O. Tysl; Walter E. Olson.

Meetings: Regular meetings of the board are held at 5 P. M. on the second and fourth Mondays of each month, except that in July and August one regular meeting is held on the second Monday of each month.

Librarian: Carl B. Roden; Assistant Librarian: N. R. Levin.

The Chicago Public Library is a public tax supported institution and is free to all the people. It was established under the Illinois Library Law of 1872 and first opened its doors on New Year's Day, 1873. The Central Library is at 78 E. Washington, on Michigan Avenue.

The Library is managed by a Board of Directors of nine members appointed by the Mayor, three annually for terms of three years. It derives its revenue from an annual library tax which produces \$2,350,000 for maintenance; and an additional tax which produces \$250,000 for building purposes only.

There are close to 700,000 holders of Library Cards, which are issued to all residents of Chicago and to residents of the suburban area.

The book collection consists of more than two million volumes in English and 39 foreign languages—about 800,000 in the Central Library, one million in the branches and the rest in smaller agencies. The annual circulation (1944) was 10,297,996. The general collection is strong in American history with

special emphasis on the Northwest, Western travel, and the North American Indian. The Library is also rich in 18th and 19th century British and American literary periodicals. Over 1500 periodicals and 100 newspapers are received currently. In addition to the book collection the Library has about 175,000 pamphlets, 500,000 mounted pictures, 90,000 lantern slides, 12,000 bound volumes of music, 25,000 pieces of sheet music, and 600 albums of phonograph records. The Chicago Public Library is a depository for United States Government documents, has one of the most comprehensive collections of patent specifications and drawings in the middle west, and serves the blind in the State of Illinois North of Springfield, and the State of Wisconsin with close to 30,000 books, periodicals and music in Braille, Moon type and Talking Book Records.

Besides the Central Library there are 3 Regional Branches, 34 Branches, 23 Sub-branches, 55 High School Libraries, and 180 Deposit Stations.

HOURS

CENTRAL LIBRARY

Weekdays: 9 A. M. to 7 P. M. for Circulations. 9 A. M. to 9 P. M. for Reference.

Sundays: 1 P. M. to 6 P. M. for Reference.

BRANCHES

Weekdays: 9 A. M. to 9 P. M. except those starred below, which are open 1 to 9 P. M.

Saturdays: 1 P. M. to 5:30 P. M.

SUB-BRANCHES

1 P. M. to 9 P. M. and 1 P. M. to 6 P. M. on alternate days with some local variations.

COOK COUNTY FOREST PRESERVE FIRES, 1945

From January 1, 1945, until November, there were 159 fires in the Forest Preserve District burning an area of 737.91 acres. Of these fires 66 were Class "A" fires (fires which burned under one-fourth acre) 71 were Class "B" (fires which burned from one-fourth to ten acres) and 22 were Class "C" fires (fires over ten acres in extent).

Most of the fires occurred in grass covered fields and meadows, destroying 500 acres of this type of vegetation. More severe damage was caused by those fires which burned through recent plantations and in mature woodlands—76 acres in the former and 162

acres in mature forest growth.

A distance of 732 miles were traveled by trucks and automobiles and 798 man-hours of labor were expended in fire suppression work.

Causes of fires were:

Hikers, 55, 34%
Motorists, 41, 26%
Incendiary, 19, 12%
Picnickers, 14, 8%
Riders, 11, 7%
Trash burning, 7, 5%
Miscellaneous, 7, 5%
Unknown, 5, 3%.

COOK COUNTY GOVERNMENT

The government of Cook county partakes of the character of both township organization and of county government without township organization. The township government of Cook county outside the city limits of Chicago is the same as in the counties under township organization in other parts of the state, except that the super-

visors and assistant supervisors of such townships are not members of the county board. Township government practically has been abolished in the townships lying wholly within the city limits of Chicago. Township supervisors, assessors, clerks and collectors are elected every four years.

SEAL OF COOK COUNTY

The seal of Cook county was designed at the instigation of Edward J. Brundage, then president of the county board, for use as the official signature at the laying of the corner stone of the county building, Sept. 21, 1906.

National patriot-

ism, state pride and agricultural prowess are represented by the shield, which is divided by the inverted "Y", symbolic of the Chicago river; Progress in commerce and the success of the Columbian exposition are denoted by the ship, over which is blazoned the star of Illinois, emblematic of her entrance to the union. The golden book and cogwheel exemplify achievements in science, art and industry.

BOARD OF COUNTY COMMISSIONERS

(Terms expire in 1946)

Clayton F. Smith, Pres., Frank Bobrytzke, William Busse, Elizabeth A. Conkey, William N. Erickson, Peter Fosco, John Mackler, Mary McEnerney, George A. Miller,

George F. Nixon, Daniel Ryan, Edward M. Sneed, John E. Traeger, Assistant to the President: A. L. Hornick, Secretary, William G. Donne.

COUNTY OFFICIALS AND HEADS OF DEPARTMENTS

County Clerk, Michael J. Flynn; Deputy Comptroller, Michael J. Flynn; Deputy County Comptroller, Richard J. Daley; County Court Clerk, Michael J. Flynn; Circuit Court Clerk, John E. Conroy; Superior Court Clerk, Henry Sonnenschein; Probate Court Clerk, Frank J. Lyman; Criminal Court Clerk, Thomas J. Bowler; County Assessor, John S. Clark; County Treasurer, Victor L. Schlaeger; Recorder, Edward J. Kaindl; Sheriff, Michael F. Mulcahy; Coroner, A. L. Brodie; State's Attorney, William J. Tuohy; Assistant State's Attorney, Jacob Shamburg; County Superintendent of Schools, Noble J. Puffer; County Purchasing Agent, Joseph H. Donahue; County Superintendent of Highways, George A. Quinlan; County Architect, David Saul Klafter; County Auditor, Lee J. Howard; Secretary to Board of County Commissioners, William G. Donne; Medical Superintendent—All County Institutions, Dr. Karl Meyer.

Board of Appeals: James J. McDermott,

John Toman.

Jury Commissioners: John E. Traeger, Sr., William H. Cruden, John J. Hurley.

Civil Service Commission: William W. Link, Edwin A. Robson, James D. Marnane.

Retirement Board County Employees Annuity and Benefit Fund: Sylvester O'Donohue, John J. Altman, Mae Abernathy, Andrew J. Kolar, George Hagenauer.

Cook County Hospital: Warden, Gen. Manus McCloskey; Medical Director, Dr. Ole Nelson, Assistant Warden, Dr. R. T. Vaughan; County Physician, Dr. Vladimir Urse.

Oak Forest Institutions: Superintendent, Frank Venecek, Bureau of Public Welfare: Director, Joseph L. Moss.

Home for Dependent and Delinquent Children: Superintendent, Francis D. Scully.

Juvenile Court Probation Officers: Chief Probation Officer, Harry Hill.

Adult Probation Officer: Chief Adult Probation Officer, William D. Meyering.

incomplete in the actual consideration, due to the large number of documents that show a nominal consideration.

1945 DIVORCE SUITS — 19,430

A record high number of 19,430 suits for divorce has been filed in the Superior and Circuit courts of Cook county this year, an increase of 2,492 over the total filed in 1944. It was disclosed yesterday in the annual report of the courts. The volume of divorce proceedings has increased steadily for six years.

More than 15,000 divorce decrees have been signed this year by judges for the two courts, who attribute the broken homes to

hasty war marriages and the economic independence of working wives. In August, when World War II ended, 1,655 divorce suits were filed in Superior court, the highest number ever recorded in one month.

In Circuit court the number of divorce filings increased from 81 last May to 443 in November. Comparatively few divorce actions were brought in Circuit court when Judge Michael Feinberg, who had a reputation for strictness, was hearing such cases.

¹Source of figures, as follows—1880-1910: Bulletins on Mineral Industry of Alaska, prepared and issued by Alaskan Branch of Geological Survey; 1911-44: Mineral Resources of the United States and Minerals Yearbook, prepared and issued by Geological Survey (1911-23) and Bureau of Mines (1924-44).

WORLD MOTOR VEHICLE REGISTRATIONS BY COUNTRIES

(Estimated for 1944)*

* In compiling motor vehicle registrations in foreign countries early in 1944, the U. S. Dept. of Commerce was unable to get up-to-date figures from many countries. The following table includes the latest pre-war figures for those countries for which data was unobtainable for war years.

	Passenger Cars	Trucks	Buses	Total	Date
Aegian Islands	250	150	50	450	1-1-40
Afghanistan	450	1,350	(¹)	1,800	1-1-41

*Retail cost of 1935-39 average annual purchases of farm food products by a family of three average consumers.

¹ Calculated from retail prices collected by the Bureau of Labor Statistics and the Bureau of Agricultural Economics.² Payments to farmers for equivalent quantities of farm produce minus imputed value of byproducts obtained in processing.³ Marketing charges equal margin minus processor taxes plus Government payments to marketing agencies.⁴ Farmer's share of consumer's food dollar calculated from farm value before addition of producer payments.**EDIBLE CLAM**

More than 35 species of edible clams live on the Pacific coast but only five are commercially valuable, and of these, one, the razor clam, accounts for 65 per cent of the total annual catch.

ACADEMY AWARD WINNERS FOR 1944

(Selected by Academy of Motion Picture Arts and Sciences)

Best motion picture of the year—"Going My Way," Paramount.

Best performance by an actor—Bing Crosby in "Going My Way," Paramount.

Best performance by an actress—Ingrid Bergman in "Gaslight," Metro-Goldwyn-Mayer.

Best performance by an actor in a supporting role—Barry Fitzgerald in "Going My Way," Paramount.

Best performance by an actress in a supporting role—Ethel Barrymore in "None But The Lonely Heart," RKO Radio.

Best achievement in directing—"Going My Way," Paramount; Leo McCarey.

Best written screenplay—"Going My Way," Paramount. Screenplay by Frank Butler and Frank Cavett.

Best original screenplay—"Wilson," 20th Century-Fox. Screenplay by Lamar Trotti.

Best original motion picture story—"Going My Way," Paramount. Original story by Leo McCarey.

Best achievements in art direction—Black-and-white: "Gaslight," M-G-M. Cedric Gibbons and William Ferrari. Color: "Wilson," 20th-Fox. Ward Ihnen.

Certificates of merit to interior decorators of productions receiving awards for art direction—Black-and-white: "Gaslight," M-G-M. Edwin B. Willis and Paul Huldchinsky. Color: "Wilson," 20th-Fox. Thomas Little.

Best achievements in cinematography—Black-and-white: "Laura," 20th - Fox. Joseph LaShelle. Color: "Wilson," 20th-Fox. Leon Shamroy.

Best achievement in sound recording—"Wilson," 20th-Fox. E. H. Hansen.

Best achievement in film editing—"Wilson," 20th-Fox. Barbara McLean.

Best achievement in special effects—"Thirty Seconds Over Tokyo," M-G-M.

A. Arnold Gillespie, Donald Jahraus, and Warren Newcombe, photographic effects. Douglas Shearer, sound effects.

Best short subjects: One-reel—"Who's Who in Animal Land," Paramount; Jerry Fairbanks, producer. Two-reel—"I Won't Play," W. B.; Gordon Hollingshead, producer. Cartoon—"Mouse Trouble," M-G-M; Frederick C. Quimby, producer.

Best scoring of a musical picture—"Cover Girl," Columbia. By Morris Stoloff and Carmen Dragon.

Best music score of a dramatic or comedy picture—"Since You Went Away," Selznick International, U.A. By Max Steiner.

Best original song—"Swinging On A Star" from "Going My Way," Paramount. Music by James Van Heusen; lyrics by Johnny Burke.

Distinctive achievement in documentary production: Features—"The Fighting Lady," 20th-Fox and U. S. Navy. Short Subjects—With the Marines at Tarawa," U. S. Marine Corps.

Special Awards—Irving Thalberg award to Darryl F. Zanuck for outstanding production during 1944.

Best child actress of the year—Margaret O'Brien.

A life membership in the Academy was presented to Bob Hope.

LEADING MONEY-MAKING MOVIES

(Oct. 1943 - Sept. 1944)

The Adventures of Mark Twain, by Warner Brothers.

Ali Baba and the Forty Thieves, by Universal Pictures.

And the Angels Sing, by Paramount.

Bathing Beauty, by Metro Goldwyn Mayer.

Behind the Rising Sun, by RKO Radio Pictures.

Broadway Rhythm, by Metro Goldwyn Mayer.

Buffalo Bill, by Twentieth Century Fox

The Desert Song, by Warner Brothers.

Cover Girl, by Columbia Pictures.

Dragon Seed, Metro Goldwyn Mayer.

Destination Tokyo, by Warner Brothers.

Double Indemnity, by Paramount.

For Whom the Bell Tolls, by Paramount.

Gaslight, by Metro Goldwyn Mayer.

ACTORS' FUND OF AMERICA

Source: Secretary of the Actors' Fund of America

The Actors' Fund of America was incorporated June 8, 1882, by Edwin Booth, Joseph Jefferson, Lawrence Barrett, William J. Florence, Bartley Campbell, Louis Aldrich, A. M. Palmer, Augustin Daly, Lester Wallack, Edward Harrigan, William Henderson, and others.

The first regular meeting was held in Wallack's Theatre, New York City, June 15, 1882, and Lester Wallack was elected first President.

The Actors' Fund of America is a "national" institution, and the appeals for financial aid come from every section of our country. It is a theatrical charity and not a benefit society. Annual dues are \$2, and the paidup membership is 2,183, as of June, 1943.

The Actors' Fund Home was founded by Louis Aldrich, the fourth President of the Fund, and was opened at West New Brigh-

ton, Staten Island, N. Y., in May, 1902. The Institution was transferred to Englewood, New Jersey, in April, 1928. The offices are at 1619 Broadway, New York City; Walter Vincent, president; Robert Campbell, secretary.

In the fiscal year ending April 30, 1945, the fund expended \$142,954 through aid to 11,186 persons.

PERCY WILLIAMS HOME FOR ACTORS

The Percy Williams Home for Actors, Pine Acres, is at East Islip, Long Island, N. Y. The Directors are made up of Actors' Fund Trustees and members of The Lambs, New York City. The president is A. O. Brown. The Home was founded in 1923 and endowed by the late Percy Williams. It is on a 50-acre estate and accommodates 45 veterans of the stage without regard to sex.

THE YOUNG MEN'S CHRISTIAN ASSOCIATION

Source: The National Council of the Young Men's Christian Associations

The Y.M.C.A. for more than one hundred years has been serving men and boys, in uniform and civilian life, all over the world. As peace is restored the Association is gradually curtailing its extensive war services and developing new plans for the period ahead.

As one of the six organizations which at the beginning of the war formed the United Service Organizations, the Y.M.C.A. conducted 453 U.S.O. operations for Army and Navy personnel and 92 U.S.O. operations for industrial workers in defense production areas. Y.M.C.A. personnel in U.S.O. operations totaled 753. On September 1, 1945 the number of U.S.O. clubs had already been reduced to 373 for servicemen and 57 for industrial workers. United States defense policy must determine whether the number of Army-Navy Y.M.C.A.'s will be reduced to its prewar total of 24. Service to industrial workers will be continued in many places as part of the peacetime program of the Y.M.C.A.

Work in 33 different countries among prisoners of war was conducted by the World's Committee of the Y.M.C.A. at a cost of over \$9,000,000 in the past year. The Y.M.C.A., under the provisions of the Geneva Convention, provided religious, educational and recreational materials for prisoners on both sides of the conflict and sent representatives from neutral countries to visit the camps. By arrangement with U.N. R.R.A. and the Army authorities in the American occupation zone, the World's Committee of the Y.M.C.A. is still conducting a similar program for several hundred thousand former prisoners of war—Jugoslavs, Balts, Poles and others—who are now classified as displaced persons and indefinitely confined to camps in Germany.

Associations in the United States and Canada have cooperated since 1889 in encouraging the organization of Y.M.C.A.'s in the Far East, the Near East, Latin America and parts of Europe by sending well trained American secretaries to help local leaders establish Association programs and aiding in the financing of these movements until local support is adequate. The war seriously handicapped the movements in China, the Philippines, Burma, Greece, Italy, Czechoslovakia and Poland. Most American secretaries stayed abroad through the war, some of them even suffering internment. After furloughs they will return to these countries to cooperate in restoration work. Associations in the United States are contributing generously to the reconstruction of Y.M.C.A.'s abroad.

In the United States the Y.M.C.A. is emphasizing:

Rebuilding program with young men 18 to 25 years of age. During the war, membership in this group declined from 219,839 in 1940 to 78,666 in 1945. As veterans return home, local Y.M.C.A.'s are making membership privileges available to them at special rates, are providing trained counselors to help them with problems of personal, educational and vocational adjustment, and are offering general educational and specialized training courses at Association schools and colleges. Y.M.C.A.'s across the country have also joined with other community agencies in establishing service centers for veterans. Visitation and special programs for the hospitalized are another aspect of the Association work with

veterans.

Developing programs with children and adolescents. Association work with boys is being expanded, including such activities as: Hi-Y, high school boys' program, with 6,108 clubs; Tri-Hi-Y, an extension of the Hi-Y movement to include girls, with 1,340 clubs; Gra-Y with 2,637 clubs for grade school boys and 322 clubs for girls. The purpose of all these programs is to develop and extend high standards of Christian character. This year camping privileges were made available to 112,270 boys. The Y.M.C.A. has joined with other civic groups in sponsoring Teen Age Centers.

Strengthening work among students. The school year 1944-45 was one of the most disrupted and challenging since the organization of the Inter-collegiate Y.M.C.A. in 1877. Student Associations, however, continued work with deferred groups, veterans, 17-year olds and women, while developing leadership for a greatly expanded movement after the war.

Giving increased emphasis to citizenship and public affairs education. During 1945 Association groups studied the provisions of the Dumbarton Oaks Proposals and the United Nations Charter. A panel of Y.M.C.A. leaders was named to be present in San Francisco during the United Nations Conference and report on the progress of deliberations. Extensive use has been made of the film forum as a technique of public affairs education. There has also been growing interest in the Hi-Y Youth and Government Program whose purpose is to prepare a select group of young men for moral and political leadership in the American democracy by providing guidance, training, and experience in the theory and practice of determining public policy.

Rehabilitating buildings and furnishings. For several years Association properties have received extra heavy wear because of the large numbers of servicemen and transients served in social rooms, cafeterias, dormitories, gymnasiums and swimming pools, while replacements have been impossible. Most Associations, however, have accumulated funds through special campaigns for new buildings and extensive repairs.

Extending the Y.M.C.A. Movement. The war has given an impetus to Association work in unorganized areas through demands from communities that have had U.S.O. clubs for servicemen or industrial workers and from the home communities of veterans who have experienced Y.M.C.A. service.

The Y.M.C.A. in the United States approaches the problems of a post-war world with a united movement consisting of 896 City Associations, 72 of which are colored, 24 Army and Navy, 83 Town and Country, 124 Railroad, and 140 Student Associations—a total of 1,267 Y.M.C.A.'s; with a leadership of 2,827 employed officers and 169,229 laymen who are members of boards and committees; with a constituency of 1,295,393 members and 290,694 registered non-members; with 98,528 organized groups using Association facilities; with property valued at \$224,398,200; and with annual expenditures totaling \$70,416,200.

The National Council of the Y.M.C.A.'s maintains offices at 347 Madison Avenue, New York 17, N. Y. Officers are Howard A. Coffin, president, and Eugene E. Barnett, general secretary.

FIRST HIGH SCHOOL IN THE UNITED STATES

On Feb. 13, 1835, in Boston, Mass., was launched the first high school in the United States and the forerunner of the modern high school in this country. The town records of Boston of that period show that the people of the community, led by John Cotton,

voated that "our brother Philemon Pormont shalbe intreated to become scholmaster for the teaching and nourtering of children with us." The school so organized was called the Publick Latin school, and was the founder of free education in this country.

HIGHEST MOTOR HIGHWAY IN EUROPE

It is claimed that the highest motor highway is the road 10,800 feet above sea level in the Sierra Nevada mountains of Spain. Over this road tourists can drive to a point five miles from the peak of La Veleta. Such a trip formerly was a two days' journey

with guides, mules and a night's camping out, for La Veleta is one of the highest peaks of the Sierra Nevada, 11,150 feet above sea level, and covered with snow all the year round.

PUBLIC-SCHOOL LIBRARIES, 1941-42

Schools in systems:		Median number of volumes per library.....	1,247
Number in all systems.....	208,235	Average number of volumes per pupil.....	4.5
Number covered by usable reports ¹	111,503	Number of volumes per library added during year.....	2,167,328
Percent covered.....	55.5	Average number of volumes per library.....	107
Number reporting some form of library service.....	102,502	Total income and expenditures for libraries:	
Percent served.....	91.9	Number of systems reporting..	3,471
Number reporting no library service.....	9,001	Enrollment in systems reporting	9,308,628
Percent not served.....	8.1	Total income.....	\$12,564,963
Enrollment:		Average income per system....	3,620
Number enrolled in all systems	24,562,473	Average income per pupil enrolled.....	1.35
Number covered by usable reports.....	17,056,008	¹ Includes 4,068 combined elementary and high schools counted as one school which, for computing percent of the 208,235 schools covered have been counted as two schools, one elementary and one high.	
Percent covered.....	69.4	Total income and expenditures for libraries—Continued.	
Number reported receiving some form of library service.	16,351,365	Total expenditures for libraries.	\$12,437,964
Percent served.....	95.9	Average expenditure per system	3,583
Number reported receiving no library service.....	704,643	Average expenditure per pupil enrolled.....	1.34
Percent not served.....	4.1	Expenditures for books, pamphlets, and periodicals only.....	4,640,888
Type of library service:		Average expenditures per pupil enrolled for books, pamphlets, and periodicals.....	0.50
Percent of schools served by:			
Centralized libraries.....	27.1		
Classroom collections only.....	59.3		
Loan collections only.....	10.0		
No library facilities.....	3.6		
Centralized libraries:			
Number of volumes.....	38,292,644		
Average number of volumes per library.....	1,893		

PUBLIC LIBRARY STATISTICS, 1938-39

Number of public libraries on mailing list.....	6,880	Expenditures (5,452 libraries):	
Number reporting.....	5,798	Operating.....	\$48,832,043
Population of area served by reporting libraries.....	79,095,716	Capital outlay.....	\$2,699,398
Number of registered borrowers.....	24,084,916	Percent of public libraries reporting.....	84.3
Book stock (5,668 libraries).....	104,728,725	Percent of total U. S. population served by reporting libraries.....	60.4
Circulation of reporting libraries:		Percent of population in area served reported as registered borrowers..	30.5
Adult.....	251,727,397	Percent of circulation reported as:	
Juvenile.....	138,087,203	Adult.....	60.5
Undesignated.....	26,109,735	Juvenile.....	33.2
Personnel in libraries:		Undesignated.....	6.3
Professional and subprofessional:		Book stock per capita of population in area served.....	1.3
Full-time.....	15,680	Operating expenditures per capita of population in area served.....	\$0.62
Part-time.....	4,960		
Clerical:			
Full-time.....	3,475		
Part-time.....	4,948

Distance in nautical miles. . . Statute mile=1.152 nautical miles.

ORIGIN OF NAMES OF NAVAL SHIPS

Source: U. S. Coast Guard

Battleships—States.
Cruisers—Cities.Destroyers—Deceased naval and marine
corps officers and enlisted men, former
secretaries of the navy and congressmen who
have been closely identified with naval
affairs.

Mine Sweepers—Birds.

Oil tankers—Rivers in oil states.

Repair ships—Mythical characters or
places.

Gunboats—Islands and cities.

Navy tugs—Indian tribes.

Transport ships—Famous battles.

Supply ships—Synonyms for cold.

Hospital ships—Synonyms for kindness.

Aircraft carriers—Famous fighting ships
important battles of our early American
history, and famous men.

100 CALORIE PORTIONS OF COMMON FOODSTUFFS

(Source: American Medical Association)

Foods which are very good sources of vitamin A are marked (A) and those which are very good sources of vitamin C are marked (C); very good sources of phosphorus are marked (Ph); very good sources of iron are marked (Iron), and very good sources of calcium are marked (Ca). Vitamins B and G will not be lacking in a well rounded diet such as is here described.

Food material		100-calorie serving	
Almonds, shelled.....	12-15 nuts		
Apples, fresh (C).....	1 medium		
Apricots, dried.....	9 halves		
Apricots, fresh (A-C).....	5 whole		
Asparagus, fresh (Iron).....	20 large, 8" long		
Bacon, broiled.....	4-5 small slices		
Banana (A-C).....	1 medium		
Barley, pearl.....	2 tbsp.		
Beans, lima, dried (Ph) (Iron).....	$\frac{1}{2}$ cup		
Beans, navy, dried (Ph) (Iron).....	$\frac{1}{2}$ cup		
Beans, string, fresh, (A) (Iron).....	2½ cups		
Beef, lean, round (Ph) (Iron).....	3"x2"x½"		
Beets, fresh.....	4 beets		
Blackberries, fresh (C).....	1½ cups		
Blueberries, fresh.....	1 cup		
Bran (Iron).....	1 cup		
Bread:			
Boston brown (Iron).....	3" diam x ¾"		
Graham (water) (Iron).....	1½ slices (3"x3½"x½")		
Rye.....	1½ slices (3½"x4"x½")		
White (water).....	2 slices (3"x3½"x½")		
White (milk).....	2 slices (3"x3½"x½")		
Whole wheat (milk) (Ph) (Iron).....	1½ slices (3"x3½"x½")		
Broccoli (A) (Ca) (Iron).....	2½ cups		
Brussels sprouts (A) (Ph) (Iron).....	1 qt. box		
Butter (A).....	1 tbsp.		
Buttermilk.....	1½ cups		
Cabbage, raw, new (C).....	3½ cups		
Cantaloupe (A).....	1 melon		
Carrots (A) (C if raw).....	1½ cups		
Cauliflower.....	1 small head		
Celery (Ca).....	4 cups		
Chard (Ca) (Iron).....	1½ cups		
Cheese, American (A) (Ph) (Ca).....	1½" cube		
Cheese, Cottage (Ph) (Ca).....	5 tbsp.		
Cheese, soft cream (A) (Ph) (Ca).....	2 tbsp.		
Cherries, fresh, stoned.....	20 cherries		
Chicken, lean meat (Ph) (Iron).....	3 slices (3½"x2½"x¼")		
Chocolate, unsweetened.....	¾ of 1 sq.		
Clams, round (Ca).....	12 clams		
Cocoa, powder.....	2½ tbsp.		
Cod liver oil (A).....	1 tbsp.		
Corn, canned.....	½ cup		
Corn, fresh.....	2 ears 6" long		
Cornmeal, cooked.....	½ cup		
Cornstarch.....	3 tbsp.		
Cottonseed oil.....	1 tbsp.		
Crab meat, canned (Ph).....	¾ cup		
Crackers, soda.....	2 cups		
Cranberries, fresh (C, if raw).....	4 crackers		
Cream, thin (18.5% fat).....	¾ cup		
Cream, thick (40% fat).....	1½ tbsp.		
Currants, dried.....	1½ cups		
Dates, dried, stoned (Iron).....	4 dates		
Egg plant.....	6 slices 4" diam. x ½"		
Eggs (A) (Iron).....	1½ egg		
Farina, light, cooked.....	¾ cup		
Figs, dried (Ca) (Iron).....	2 medium		
Flour:			
Graham (Iron).....	3 tbsp.		
Rye (Iron).....	3 tbsp.		
Wheat, white.....	3 tbsp. unsifted		
Gelatin, granulated.....	1 tbsp.		
Grapefruit (C).....	½ large		
Grape juice.....	½ cup		
Haddock, fresh.....	Section, 1½" on back, 4" wide		
Halibut steak.....	3"x1¾"		
Ham, lean, smoked (Iron).....	4¾"x4"x1½"		

Herring, fresh.....	2"x2¼"x1½"		
Honey.....	1 tbsp.		
Kale (A) (Ca) (Iron).....	2½ cups		
Lamb chop, broiled.....	2"x1½"x¾"		
Lamb, leg, medium fat.....	4"x4"x½"		
Lard.....	1 tbsp.		
Lemons (C).....	3 large		
Lentils, dried (Iron).....	2½ tbsp.		
Lettuce, green leaves (A).....	2 large heads		
Liver, beef (A) (Iron).....	3"x3"x½"		
Macaroni, cooked.....	¾ cup		
Mackerel, fresh.....	Cross section, 2½" back		
Milk (Ca) (Ph):			
Condensed (sweetened) (A).....	1½ tbsp.		
Evaporated (unsweetened) (A).....	4 tbsp.		
Malted (A).....	3 tbsp.		
Skimmed.....	1½ cups		
Whole.....	¾ cup		
Whole, dried (A).....	3 tbsp.		
Molasses (Ca) (Iron).....	1½ tbsp.		
Mushrooms.....	20-25 mushrooms		
Mutton, leg, roasted (Iron).....	3"x3½"x1½"		
Oats, rolled, cooked (Ph) (Iron).....	¾ cup		
Oleomargarine.....	1 tbsp.		
Olive oil.....	1 tbsp.		
Olives, green, stoned.....	6-8 medium		
Onions (C, if raw).....	3-4 medium		
Oranges (C).....	1 large		
Orange juice (C).....	1 cup		
Oysters (Ca) (Ph) (Iron).....	6-15 oysters		
Peaches, canned (C) 2 large halves, plus 3 tbsp. juice			
Peaches, fresh (C).....	3 medium		
Peanut butter.....	1 tbsp.		
Pears, canned.....	3 halves, plus 3 tbsp. juice		
Pears, fresh.....	2 medium		
Peas, canned (with liquor) (A) (Iron).....	¾ cup		
Peas, dried split (Iron).....	2 tbsp.		
Peas, fresh green (A) (Iron).....	¾ cup		
Peppers, green (A) (C, if raw).....	5-15" long		
Pineapple, canned (C).....	1 slice, plus 3 tbsp. juice		
Pineapple, fresh (C).....	2 slices (1" thick)		
Plums.....	3-1½" diam.		
Pork, loin chop, lean (Iron).....	2 medium		
Potatoes, sweet (A).....	½ medium		
Potatoes, white (C) (Iron).....	1 medium		
Prunes, dried, stoned (Iron).....	2 medium		
Radishes.....	3 doz. red button		
Raisins.....	2 tbsp. seedless		
Rhubarb, fresh.....	4 cups		
Rice, white, uncooked.....	2 tbsp.		
Rutabagas, fresh.....	1½ cups		
Salmon, fresh.....	2"x3"x¾"		
Salmon, canned.....	¾ cup		
Sardines, canned (Ph).....	4 sardines, 3" long		
Sauerkraut.....	2½ cups (solid)		
Shad, whole fresh.....	2"x2½"x2"		
Smelts.....	2 fish, 6" long		
Spinach (A) (Ca) (Iron).....	2½ cups		
Squash, Hubbard.....	1 cup		
Strawberries, fresh (C).....	1½ cup		
Sugar:			
Brown.....	3 tbsp.		
Granulated.....	2 tbsp.		
Powdered.....	2¾ tbsps.		
Tomatoes, canned (A) (C).....	2 cups		
Tomatoes, fresh, whole (A) (C).....	2-3 medium		
Tomato juice, canned (A) (C).....	2 cups		
Trout.....	2" x 2" x 1"		
Tuna fish, canned, oil.....	¾ cup		
Turnips.....	2 cups		
Veal, lean, leg, roasted (Iron).....	2" x 2¼" x 1½"		
Walnuts, English.....	8-16 meats		
Watercress (A) (C, if raw).....	5 bunches		
Watermelon (C).....	¾" thick, 6" diam.		
Wheat:			
Flaked, cooked (Iron).....	¾ cup		
Puffed.....	2 cups		
Shredded (Ph) (Iron).....	1 biscuit		
Yeast, compressed.....	5½ cakes

SOVIET POPULATION TOTALS 193,000,000

G. F. Alexandrof, chief of the propaganda section of the Communist party's central committee, says that the soviet union's population now totals 193,000,000. Of this number, 100,000,000 were born after the October revolution in 1917.

(The census of Jan. 17, 1939, gave the

population of the then 11 soviet republics a 170,467,572. Since then Russia has absorbed parts of pre-war Poland and Bessarabia, and created five new republics—the Karelo-Finnish soviet socialist republic, the Moldavian republic, and the soviet republics of Estonia, Latvia, and Lithuania.)
